Tenth. Acreage histories for the 2-year life of this program would be automatically preserved.

At the end of the 2 years, the wheat program would revert to the program provided under present law, unless the Congress takes further action before the 1962 crop is planted.

The People Speak

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. O'BRIEN of New York. Mr. Speaker, the voices of great men have been raised in sorrowful lament over the death of a great man, John Foster Dulles.

But, throughout our land, millions of plain folk are also bowed in sadness.

A lady of my district wrote a little poem to express her feelings. She never dreamed that it would appear in the CONGRESSIONAL RECORD.

I ask the privilege of placing it there because it so well says what all our people are saying in their hearts:

JOHN FOSTER DULLES

Tree from the root of Jesse formed,
Rugged, straight, and strong;
Unshaken when by error stormed
Inviolate to wrong.

Rock to build ideals upon,
That the ages can't efface;
And nations carve their future on
His timeless face.

But stately trees will e're spire
To touch the hand of God
And be cut down; their sole desire
To be His staff and rod.

And rocks will tend to form a room
To shelter human clay,
Or hold Christ's body in a tomb
Till resurrection day.

—*Katherine Mary Coyne.*

Opposition to Khrushchev's Visit

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a most interesting letter written by Mr. Eugene W. Castle, 30 Rockefeller Plaza, New York, to Mr. David Dubinsky, president of the International Ladies Garment Workers Union in New York, concerning the opposition of the vast majority of Americans to inviting Khrushchev to visit the United States:

NEW YORK, N.Y., *May 19, 1959.*

Mr. DAVID DUBINSKY,
President, International Ladies Garment Workers Union, New York City.

DEAR MR. DUBINSKY: The vast majority of Americans who want to preserve our constitutional rights and liberties are deeply indebted to you for your forthright and patriotic declaration rejecting participation in, or invitation to, the cultural fair to be staged in Moscow in late July. And it is heartening to know, too, that Mr. George Meany, president of the AFL–CIO, upholds your position in this vital matter.

As you clearly conveyed in your recent statement, the great advantage to the Soviet Government in the forthcoming propaganda cultural fairs, both in Moscow and New York City, is that these fairs, and especially the one here, will provide a false and wholly exaggerated demonstration to millions of unthinking Americans of the purported power and distorted accomplishments of the Soviet Union. And all this will take place in the heart of New York City, under a U.S.A. dateline to the world.

But, worse still, the invasion of New York City by the Soviets through their cultural fair will enable them to export this propaganda achievement throughout the world. And they will continue to do this for a period of years just as they are still doing with the youth festival held in Moscow several years ago.

It is tragic that our leaders at the political summit in Washington, D.C., are today per-

forming handsprings and tripping over themselves officially to assist and expand Khrushchev's propaganda mill. They are doing this while they bitterly, and rightfully, condemn the menace of world communism and frantically demand more billions to fight this menace. These two totally divergent attitudes are completely irreconcilable. Free Americans should not be subjected to such deceit.

In addition to the infamous propaganda fairs to be held in New York City and Moscow, the American people are about to be conditioned for the visit of the "Red Hitler," Nikita Khrushchev, to the United States.

On the same day that Soviet Foreign Minister Gromyko was rejecting the Allied proposals for the settlement of the West Berlin problem at Geneva, U.S. Secretary of State Christian Herter publicly and officially announced that an invitation to Khrushchev to come to the United States was in the immediate offing.

Our citizens are soon to be subjected to a repetition of the sorrowful spectacle occasioned by the recent visit of ex-bank robber and Budapest doubledealer, Anastas Mikoyan. President George Meany was one of the very few distinguished Americans who publicly condemned the sad spectacle occasioned by Mikoyan's propaganda inspired reception in official Washington and his subsequent barnstorming of the United States.

Surely, the interest of world peace at this critical hour would be far better served if Khrushchev stayed in Moscow and Vice President NIXON remained in Washington, D.C.

The overwhelming majority of our citizens do not want and completely reject Khrushchev's slave world. And since Soviet citizens have no freedom of choice, the politically hopeful Mr. NIXON cannot gain any votes by utilizing the Cultural Fair and Mr. Khrushchev's office in the Kremlin as a means of gaining headlines for himself. On the contrary, millions of American citizens will reject and condemn such tactics.

While the Soviet Government threatens to make a separate treaty with its stooge government in East Berlin, and while they directly threaten our battle-won rights to maintain our Armed Forces in West Berlin to safeguard our continued occupation of the American sector in that divided city, there is no valid reason why the U.S. Government should sanction so-called cultural fairs in New York City and Moscow.

Coming at this time, these fairs are likely to prove of the greatest value in promoting the false peace claims of the Kremlin. And, God forbid, should we become involved in a brush-fire war or worse over West Berlin at the time that these fairs are taking place, our Government and its 12,000 U.S. Information Agency press agents will quickly become the laughing stock of friend and foe alike.

Our Government has no right to expose our citizens to this propaganda trap. President Eisenhower should insist that these fairs, both in New York City and Moscow, be postponed indefinitely. Moreover, the Cultural Exchange Pact of January 27, 1958, between the United States and the U.S.S.R., which has infiltrated our country with Soviet spies and an avalanche of made-in-Moscow propaganda on a scale never before permitted or even dreamed of, should be terminated now and not extended for another 2 years as was recently proposed.

I sincerely believe that all religious leaders of all faiths throughout our country would render a great service if they would voice vigorous disapproval and forceful condemnation of the growing tendency of our political leaders officially to promote godless Russia with so-called cultural exchange pacts, programs, and exhibitions. These serve only to propagate the underhanded plans and harmful objectives of Khrushchev and his fellow dictators in the Kremlin whose avowed aim is to wipe out all religion and conquer the world.

These efforts help the Kremlin immeasurably, while they hamper and hurt the legitimate aspirations and aims of the governments of the peoples of the free world. Only headline hunters and self-serving political luminaries gain temporary benefits for themselves from their illicit relations with the Kremlin.

The time has arrived to put a stop to these malpractices.

Sincerely,

EUGENE W. CASTLE.

Poison in Your Water—No. 87

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 27, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Augusta (Ga.) Herald of February 18, 1958, entitled "Oates Creek for Rats":

[From the Augusta (Ga.) Herald, Feb. 18, 1959]

OATES CREEK FOR RATS

(By Margaret Twiggs)

Raw waste pouring into the Oates Creek open sewer from two meatpacking plants supports a large population of rodents and definitely affects the Richmond County Health Department rodent control program, a health department official said today.

Sanitary Engineer C. K. Memory said:

"While there is no harmful bacteria from the waste it does not help our rodent control program as it gives the rats a source of food supply."

He added the rats burrow along the banks of the stream which flows a winding way through a large residential area in the Milledgeville Road section.

Is it possible for the two meatpacking houses, Avers Provision Co. and Shapiro's Packing Co., to tie into a nearby trunk line for sanitary sewers?

"Yes," replied Memory.

City Engineer M. P. Phillips said Avers gave the city an easement through its property providing the city in return allowed the company three taps onto the sewer line.

"In August 1955 Avers applied for one tap which is the only one it has applied for so far. I believe this was for other sewage than the raw waste," he said.

He also said Shapiro was requested to tie into the sewer line about 2 years ago but so far it has made no application to tap in.

Since Shapiro is in the county, the city has no further authority in the matter, Phillips said.

Memory said his department will begin immediately to concentrate on an all-out effort to get the two concerns to tie into the line located 100 feet from the Avers plant and about 60 to 70 feet directly in front of the Shapiro plant.

Memory explained that the effect of the raw waste was not as harmful as the home sewage that pours into Oates Creek as the result of a combined sanitary and storm sewer which empties into the creek.

The rats living off the raw waste are carriers of murine typhus which was prevalent here prior to 1950 when the Federal Government made a tremendous effort to eliminate it, according to Memory.

Memory described murine typhus as similar to Brille's fever. He said rats along the creek banks are carriers of the black plague which has not been prevalent in this country for a number of years.

Since 1950, there have been only scattered cases of murine typhus in the county, mostly among workers in feed mills where there are a lot of rats, he added.

Letter From Constituent on the Farm Problem

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 27, 1959

Mr. LEVERING. Mr. Speaker, out of a sincere desire to be of all possible service and to fully represent all the fine people I have the honor to represent in Ohio's 17th Congressional District, I welcome their views on current issues before the Congress, whether I agree with them or not.

I am gratified by the volume of mail I receive daily, for I know as a rule that people who write are people who think. In my judgment, a thoughtful and vocal citizenry is absolutely essential to the success of representative government.

Under unanimous consent granted, I am inserting into the Appendix of the RECORD a letter from one of my constitutents, Mr. John P. Conlon, of Newark, Ohio. I call this pungent satire to the attention of my colleagues, believing that it points up one of the most serious problems before this Congress, the farm problem, and suggest that we all should think—think as we have never thought before—upon the solution of the problem. The letter follows:

NEWARK, OHIO, *May 24, 1959.*

Representative ROBERT LEVERING,
House Office Building,
Washington, D.C.

DEAR SIR: I recently thought up a fine solution to the wheat surplus problem. I think it is a stupid solution, but no more stupid than the problem. Here's the dope.

Convert all the wheat to starch. Convert the starch to nitrostarch. Take it out to Eniwetok and blow it all at once, one time each year. This would not only get rid of the wheat, but it would contribute to fuller employment.

First, the conversion of the wheat to starch would take many more plants, and in turn boost the machinery business and construction.

Secondly, the nitration would have to be done at proper plants, and this would mean reactivating explosives plants now shut down.

Third, it would take immense amounts of packing material and the lumber, paper, and crating people would get back to work.

Fourth, it would take immense numbers of freight cars to ship, and revive a lot of sick railroads.

Fifth, it would use many ships and give our merchant fleet and the shipping industries of friendly nations a boost.

Sixth, it would require coverage by TV and the taxpayers could see where their money was going when it is touched off. This

would give many TV news analysts a chance at a Pacific trip.

It might also give the Communists such amusement that they might laugh themselves to death and we would be shut of another problem.

There it is. It may sound foolish, but no more so than some of our other problems. You are welcome to use this solution for whatever purpose you see fit. Who knows, some day it might make you famous?

Yours truly,

JOHN P. CONLON.

P.S.—This is also applicable to corn, rice, and other such cereals.

Address by the Honorable Hugh M. Milton II, Under Secretary of the Army

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. FEIGHAN. Mr. Speaker, it was my privilege to hear the inspiring address delivered by Hon. Hugh M. Milton II, Under Secretary of the Army, at the dedication of the Mote U.S. Army Reserve Training Center, Parma, Ohio, on Sunday, May 24, 1959.

Under leave granted, I insert Secretary Milton's address in the RECORD:

ADDRESS BY UNDER SECRETARY OF THE ARMY, HON. HUGH M. MILTON II, AT DEDICATION OF THE MOTE U.S. ARMY RESERVE TRAINING CENTER, PARMA, OHIO

It is a very real pleasure for me to be here with you and participate in the dedication ceremonies of this U.S. Army Training Center. I should like at this time to take the opportunity to extend to you greetings from the Secretary of Defense, Secretary of the Army, and the Army Chief of Staff. On behalf of all of us here in Washington, I would like to express our sincere appreciation to the citizens of Parma and the State of Ohio for their outstanding support of the Reserve component program. You may know, over the past few years in my official capacity I have dealt with matters concerning the civilian components of the Army, and I realize, and I say this with humility, perhaps better than most, how tirelessly and unselfishly the officers and men of the U.S. Army Reserve in Parma and in the State of Ohio, as well as throughout the Nation, contribute of their time and effort to the common cause of our Nation's defense.

It is indeed a privilege and great honor to be here today on the occasion of this dedication ceremony.

We have come here today, my friends, for a far greater purpose than to just dedicate a building.

We are assembled to honor the memory of an American patriot, a hero, whose gallant example should forever inspire us to serve our country to the utmost of our ability; but even more, that we are meant to pledge our own best efforts to build a strength that will maintain our fredom.

As we dedicate this building, as we honor the memory of Lt. Kingston H. Mote, it is only proper that we should review the part that each of us is called upon to play in maintaining our precious American liberty.

The citizens of this community have decided to call this building the Kingston H. Mote Army Reserve Center. It is the undaunted and dedicated spirit of this Ohio soldier that you honor. Because his example as a God-fearing citizen and as a true American patriot was so outstanding, you have selected his name to remind all of us of our duty as Americans. I do not think that anywhere in the glorious history of the State of Ohio could you have found a finer example of honest, sincere, and dedicated patriotism for the rest of us to try to emulate than the record set by this young man in the few years he was given to live among us.

Many of you here today knew Lieutenant Mote personally. Many of you know his mother, Mrs. Sena V. Mote, whom we are honored to have with us at this time. But whether we knew him personally, or by reputation, we can only be inspired by looking for a moment at his heroic list of achievements.

Born in Cleveland on the 8th day of November 1921, he gave up his life on the field of battle in Germany on the 15th day of April 1945. In the less than 24 years that elapsed between those two dates he endeared himself to our memory in many ways. Educated in Cleveland and in Parma, his high school annual prophetically said of him in 1939, "He had a heart to resolve, a head to contrive, and a hand to execute."

He entered Ohio University in the fall of 1939, and upon graduation was called to the colors. Having been a member of his college infantry ROTC section, he went immediately to the infantry school at Fort Benning and upon graduation was commissioned a second lieutenant of infantry. He was assigned to the 83d Infantry Division, the famous Ohio Thunderbolt Division, elements of which will be stationed in this very building.

On the night of November 20, 1943, a fire broke out in one of the officer's quarters. Lieutenant Mote, demonstrating the valor that was to be typical of his entire military career, risking his own life, entered the burning building and saved the life of an unconscious officer by carrying him to safety. He was awarded the Soldiers medal for valor for this conspicuous act of bravery.

He accompanied the 83d when it sailed for further training in England on April 6, 1944. Twelve days after the invasion of Hitler's fortress Europe was launched by the Allies, Lieutenant Mote and the 83d entered the furious fighting in the hedgerows of Normany. In July the lieutenant was wounded in action, but after treatment insisted upon returning to his unit, G company of the 331st Infantry.

The division broke out of Normandy on July 25, fought their way to the Brittany Peninsula, and then held the south flank of the Allied armies along the Loire River line. It was on this mission that the 331st Infantry bottled up 60,000 Nazis in St. Nazaire. Relieved of this duty in September, a few days later they were pushing the enemy out of Luxembourg and over the Moselle River. On December 6 the 83d Division moved into the hellish Hurtgen Forest and soon pushed through this bloodiest battleground to secure the west bank of the Roer River.

In this drive Lieutenant Mote's company G made the successful key attack on December 10 to capture Gey—the most formidable Nazi stronghold west of the Roer River. It was after this engagement that the men of the young lieutenant's company began to believe him indestructible. For his leadership in combat he was given a battlefield promotion to first lieutenant. It was Christmas Day that he received word of his promotion, and with his unit he was on the way to the Battle of the Bulge, near Aachen, at the time.

Here again this Ohio patriot was to distinguish himself by gallantry in action. In 5 days the division severed the German supply lines and on the 12th of January the 331st Infantry attacked to secured ground from which to launch an armored offensive. Although his company was in battalion reserve as they approached the key high ground, Lieutenant Mote saw the leader of the attacking company fall and without hesitation he moved forward and led the attack to gain the enemy strongpoint. In this action he was again wounded. In recognition of his bravery and sterling leadership under heavy artillery and mortar fire, a grateful Nation awarded him the Silver Star Medal.

It was late in February when the lieutenant was sufficiently recovered from his wounds to rejoin his unit but he was with the 331st when they secured the west bank of the Rhine at Neuss. On March 29, the 83d crossed the Rhine and encountered the fanatic defense of the elite German SS troops. With little time for either food or sleep the 331st pushed rapidly toward Berlin, releasing thousands of Allied prisoners en route and capturing over a thousand German SS troopers.

In an unprecedented drive, the division covered 200 miles in 10 days and crossed the Elbe River on April 13. Two days later the second battalion pushed out of the bridgehead and in the attack on Hohenlepte, Lt. Kingson H. Mote made the supreme sacrifice.

Present at this ceremony today are two men who, with his beloved father, John Mote, played a key role in molding the character of this remarkable young man—Mr. William A. Rolland, his Sunday school teacher, and Mr. W. E. Bassett, his high school principal. The guiding influence of these three men, coupled with the loving devotion of his mother, welded the character of Kingston Mote and provided him with the faith, and the firm belief in the requirement for freedom that inspired him to achieve his enviable place among the heroes of our national life.

It is this great faith in our country's destiny, so nobly exemplified by Lieutenant Mote, that we can profit most by understanding. Why must every generation of Americans be called upon to sacrifice, that we may remain a free nation? How is it that we cannot pass to our children the peace we fought for in two world wars and in Korea.

These are questions that trouble us all, no matter where we serve. As taxpayers, we look at this building and ask ourselves, why must we spend more than a half million dollars for a structure of this type? As parents we wonder why our sons are preparing for a possible new war. And the men who make up the elements of the 83d Division who are stationed here, they too have many questions about the necessity for their sacrifice. And yet, as we ask these questions, we know the answer. The world is both united and divided as never before. The Iron Curtain and the Bamboo Curtain separate two entirely different ideologies. In the free world we are united because we believe in the principle of the dignity of the individual. We believe that governments are created by the people and to serve the people. In the Communist camp they believe that the individual exists only to serve the government, as the ruling clique believes best. We believe in God. They do not. We believe in free elections, where the people have a choice as to who shall serve them. They believe only in the party which takes all, owns all, and serves only itself. We believe in freedom. They believe in slavery.

We know, and they know, that as long as there is one man in slavery in this world, all freemen are in danger. And as long as there is one freeman on the face of this globe, the spark exists that may set free those who are enslaved. They have threatened in every possible way to intimidate us. They are continually seeking ways and means of infiltrating into our midst, of causing trouble and turbulence wherever possible, and whenever possible. Their code permits them to break treaties and solemn obligations when it suits their convenience

and this course of action is most disturbing to the peace. There is no limit to which communism will not go in order to accomplish their avowed and firm intention to dominate the entire world.

In the face of this threat we have been forced to make certain sacrifices that are contrary to our liking. All of us would like to devote our energies to building a better world and living a fuller life. But we know too well that if we do not have the means to preserve that which we already have, there is no reason for building for the tomorrow. First things come first, and that which we now have, we are firmly resolved we will not lose.

One hundred and eighty-four years ago, when our forefathers founded this Nation, Russia must have seemed as far away from the Ohio territory as does the moon today. And probably those early settlers knew less and cared less about Russia than we do about the moon. But in the less than two centuries that have elapsed since that day, we have compressed time in such a manner that a shot fired in anger on the other side of the earth can mushroom into an atomic explosion on the shores of Lake Erie minutes later.

As a Nation and as individuals, we are involved in any trouble that occurs anywhere in the world. In this sense, when we split the atom, we united the world. If we are to maintain the peace that we desire so sincerely in the metropolitan Cleveland area, we must exert every effort to see that there is peace in Turkey, in Formosa, as well as in all of the other NATO nations, the Manila Pact nations, the Latin American nations, and the United Nations.

Now this is only doing what Americans have always done. Only we are doing it on a larger scale. For basically, we are protecting ourselves and the allies on whom we depend. We are seeking to secure the economic, spiritual, political and scientific traditions that are the heritage of the modern world. The only way that we can do this is by trying with all of our might to maintain the peace.

Why must we undertake so much responsibility?

For one thing, because our stake is so great—we have so much to lose. Our freedom is so comprehensive, our opportunities so available to all, that we dare not let them slip from us. For another, we alone have the means and the strength to assume this responsibility. And a third reason is we all realize that if we allow a tiny hole to be created in the dike, it will spread until the whole frontier of freedom crumbles and is buried beneath the inky blackness of Communist oppression.

This situation is new only in its scope. When Ohio became the 17th State of the Union, we stood guard over a hostile frontier and your pioneer forefathers fought police actions and full scale wars. They lived with a rifle in their hands. Today, the frontier has returned—but today it is as high as outer space and as wide as the universe. The rifle is not the only weapon our soldiers are armed with on this new frontier, and the very fearsomeness of some of our new weapons makes it necessary that war be the last resort for defending the new frontier.

Freemen have always chosen peace—when they could keep peace without losing freedom. History has taught us that peace with freedom comes only to the nation that has the strength, both economically and militarily, to win a war should war be forced upon it. That is the reason we have built this new Reserve center, and the 374 others of like nature that have been or are being constructed across our Nation. This is the reason that 300,000 of our young men are serving in Army Reserve units, doing double duty as civilians and as soldiers, as are 400,000 in our National Guard. These men realize, as did Lieutenant Mote, that in this country we have every freedom, except the freedom to shirk our responsibilities.

These men realize that we are doing even more than seeking a peace. They know that we are striving for a peace that is built upon freedom and justice. The power that we are building is not dedicated to maintaining the type of peace that might be found in a slave labor camp—or in the grave. We are building for a just and honorable lasting peace. This was the goal that our forefathers sought when they signed the Declaration of Independence, it was the type of peace that Kingston Mote died for in World War II, and it was in defense of this kind of a peace that our sons went to Korea just a few years ago. We will not accept less today. The whole world must understand this.

Let me ask the same question that the President asked in his state of the Union message to Congress last January. He posed this rhetorical question:

"Can government based upon liberty and the God-given rights of man permanently endure when ceaselessly challenged by a dictatorship, hostile to our mode of life, and controlling an economic and military power of great and growing strength."

With the lesson of history in mind, President Eisenhower answered his own question this way: "For us the answer has always been found, and is still found, in the devotion, the wisdom, the courage, and the fortitude of our people."

This power, this strength that we must have, is it dollarpower that we need?

You and I know that it is not, for all of the wealth that we have burried at Fort Knox will not buy us 1 day, or 1 hour of freedom, should the Communists ever become convinced that we are lacking in the willpower and manpower to resist his attack.

Is it manpower alone that provides our strength?

Well, manpower is one of our most precious and most important strengths, but manpower alone is not enough, for in number of bodies the Communists in Europe and Asia far outnumber us.

Our strength is in the willpower that we can muster. Within this building—in this great Cleveland metropolitan area—and throughout our Nation, each of us has the responsibility of rendering energetic, enthusiastic and wholehearted support to our defense mission. I think that all of us accept this responsibility, but because we are ordinarily more concerned with our own private responsibilities than with national affairs, we require someone to sound the alarm and alert us to the approaching danger.

We have made, and we are continuing to make, every possible effort to replace distrust and tension with a true peace and with the real prosperity that can only come with such a peace. In the United Nations and in the diplomatic councils of the world, we have striven and are still trying by every possible means for an honorable peace. We are trying by every conceivable means to bridge the gap between our two worlds by international conferences at every level up to and including the summit. We should, and shall continue to seek a just and lasting peace with liberty and freedom for all the people of the world.

Let us remember that even as we seek this road to peace, a practical reality warns us that we must keep our powder dry. Within this building our youth will train so that we may be absolutely sure that we have the capability of fighting a modern war with modern weapons. The fact that they are training and preparing to use these new inventions will not be overlooked in Moscow. If the Communist recognizes that we have a real strength in being—that is ready and capable of resisting an attack—that attack is likely not to come. Seldom, if ever, is an armed policeman the victim of a holdup.

My friends, we are a peaceful nation, and would like to live amongst our neighbors in this complex community of nations in an atmosphere of peace—in a climate which would permit the growth of the miracles of science and further their applications to the overall good of humanity. However, all that we, as a nation stand for is in jeopardy if for one moment we forget that we must remain fully prepared and ever alert to meet any challenge directed against our philosophy of life.

Not too long ago while in Hawaii, standing on the battleship *Arizona*, I was given an everlasting message of remembrance that we should remain fully prepared and ever alert.

You, I am sure, all remember the *Arizona* was one of the ships that was sunk by the Japanese on December 7, 1941. As I stood there looking at the flag which the Navy raises to half mast every day, I heard my guide saying that down beneath the water there were more than 1,000 American bodies, where the next of kin had said, "Don't try to get them out. Let them sleep there for all eternity, lulled in their everlasting sleep by the waves of the Pacific."

While standing there in reverent silence, I looked off the bow of the ship and saw some bubbles rising to the surface. I inquired of the guide, "What is happening there? Why are those bubbles rising?" and he said, "Somewhere down in the bowels of the *Arizona*, there is a tank of air or oil, and these bubbles are merely the escaping air coming to the surface."

I said to myself, "No, that is not the answer." And here is a beautiful metaphor for the American people.

There are a thousand sacred dead down there in the bottom of the sea, and those bubbles are their voices rising to tell us that they have died for an ideal and that we, too, must be vigilant, that we must be sure that they did not die in vain and that the torch which they threw us, we will ever carry high. So it is up to each and every one of us to be ever on the lert. We must carry and hold high this living torch for all to see lest we forget what these men died for.

We must be vigilant and constantly on guard if we are to remain as a bulwark against the ever-pressing tide of international communism. This Nation and its allies must remain militarily strong. In my opinion, we are taking appropriate action to achieve this military strength.

In order to give a new dimension to the Army Reserve in our defense structure, we are now developing only those units which can meet the instant requirements of war as we know it today. We are in the midst of a reorganization which will eliminate all units no longer required in the joint war plans for the defense of our Nation. We are organizing such new units as will be required early in a general mobilization. We are adding certain types of new units which did not exist under the old concept, but which will be required in a modern war. The men who will fill these new units and man these new weapons must be properly trained in the use of their new equipment. We are now in the process of developing and putting into use new training techniques, and new means of selecting personnel to assure that our combat units will be manned by soldiers who can withstand the unprecedented stresses of the nuclear battlefield. Our efforts in this field are based upon a fundamental faith in the character and the ruggedness, as well as the adaptability of the American soldier, whether he be in the Army or in the Reserve.

We must not lose sight of the fact that in the long run our military bulwarks will not protect us if we as individuals fail to accept

our responsibilities with the total dedication that Lt. Kingston Mote demonstrated during his lifetime.

Here again, my friends, and a most important fact is that you and I must have faith and we must believe in the principles as set forth by our governmental leaders. We must have faith in the national policies for which this great Republic stands—we must believe and not waver from a steadfast adherence to the great tenets of our American faith.

Poison in Your Water—No. 86

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the RECORD an article appearing in the Wichita Falls (Tex.) Times of August 14, 1958, entitled "Business Research Finds City Growth Depends on Water":

FACTS ABOUT THE LAKE—BUSINESS RESEARCH FINDS CITY GROWTH DEPENDS ON WATER

(By Fred Buckles)

"The Bureau of Business Research reports that its studies indicate that, if adequate and acceptable water supplies are provided at reasonable cost, major urban and industrial expansion will take place in the Wichita Falls area."

This key statement in the comprehensive water study report released recently by Senator LYNDON JOHNSON underlines the need for additional water for Wichita Falls.

The joint report on the water developments and potentialities of Texas was prepared by the State board of water engineers, Army Engineers, the Bureau of Reclamation and the Soil Conservation Service.

"The present supply for Wichita Falls is obtained from Lake Kickapoo on the Little Wichita River," the Johnson report says.

MAJOR SUPPLY NEEDED

"A major additional water supply will be required to meet anticipated increases in water requirements."

The comprehensive study found that water sources in the Wichita Falls area are limited.

"Numerous reservoir sites exist that are suitable from the standpoints of topography and streamflow, but the number that can be considered for development of municipal and industrial water supplies is presently limited because of pollution which arises primarily from natural sources and to a lesser extent from man-made sources."

The report says the Scotland and Ringgold sites on the Little Wichita River are potential sources for obtaining such an additional supply for Wichita Falls. It points out that a State permit was issued to Water District No. 1 for development of the Ringgold site for municipal and industrial water supply.

Federal agencies—the Bureau of Reclamation, Army Engineers, U.S. Geological Survey, and W. J. Turnbull, Soils Division Chief of the Army Engineers at Vicksburg, Miss.—recommended the Ringgold site.

The Scotland site has substantial oil development which would cost $1.8 million to protect if a reservoir were built there. Ringgold Reservoir has no oil development. The Scotland site's ultimate yield of water is about what Ringgold initial development would be, some 25 million gallons per day, but it could not be expanded while Ringgold could be developed ultimately to a 67 million gallon per day yield, providing enough water for Wichita Falls for the next 37 years.

The study states Ringgold Reservoir has been recommended by consulting engineers for private construction and financing.

It says the Bureau of Reclamation has completed a report on the results of its reconnaissance investigations of potential water supply development for the city of Wichita Falls.

FOR AGENCIES

The study combined the facilities of four key Federal and State agencies dealing with water development and future sources.

The report facused attention on the need for more water for Wichita Falls to provide for urban and industrial expansion.

"The Texas water problem has become more serious each year because of the State's phenomenal growth of population, industry, and agriculture," the agencies declared in the report.

"The future growth and progress of Texas will be limited only by its available supplies of water.

"That growth is being limited now," the report emphasizes, "and the limitation will be continued, unless and until an adequate statewide program for control and use of the State's waters is developed."

"Urban and industrial growth in Texas in recent years has greatly increased municipal and industrial water requirements, reflecting the increase in urban population, a steadily rising per capita use of water, and the growth of industries, such as petroleum refining and petrochemical manufacturing, which need larger water supplies for their operations."

OVER LONG RANGE

"These upward trends in Texas municipal and industrial growth and water requirements are expected to continue over the next 50 years," the report said, according to surveys and reports made over the last 10 years by the Bureau of Business Research of the University of Texas for the Bureau of Reclamation.

Secretary Dulles

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Laconia Evening Citizen of May 25, 1959, published in Laconia, N.H., entitled "Secretary Dulles":

SECRETARY DULLES

Those who heard Secretary Dulles speak at the University of New Hampshire 1 year ago this month, particularly those who shook hands with him and chatted at the reception arranged by Governor Dwinell and President Johnson, are treasuring the memory of a born diplomat. Congressman MERROW in a felicitous introduction from the platform of New Hampshire Hall described him, truly as one of the greatest men ever to hold the office of Secretary of State.

Associated Press articles in today's Evening Citizen dealing with Mr. Dulles' extraordinary career are well worth reading.

Secretary Dulles could change position quickly when occasion demanded, and one had the feeling that when he did so it was but part of a plan, with each move foreseen long in advance. In the past week visas have been granted for at least two American newsmen to enter Red China, something which the Secretary has been stoutly refusing to sanction. Yet we do not take this to mean that the change in policy has come about merely because Mr. Dulles has been succeeded by Mr. Herter. We suspect that Secretary Dulles' own sense of timing indicated when the change would occur, whether he was in office or not.

American Policy and the Non-Russian Nations in the U.S.S.R.—House Joint Resolution 355

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 29, 1959

Mr. FARBSTEIN. Mr. Speaker, most Americans are unaware of the fact that some of the greatest potentials for world freedom exist within the Soviet Union itself. Many do not even know that over half of the population in the U.S.S.R. is non-Russian, made up of formerly independent nations which aspire to the blessings of national freedom which we in this country enjoy. Those who do know these basic facts have, unfortunately, come up with no creative and imaginative ideas designed to realize these potentials. In short, we have no effective American policy toward the non-Russian nations in the U.S.S.R., a policy with deep economic, political, cultural, military, and historical ramifications.

To develop these potentials for world freedom, I have introduced House Joint Resolution 355, calling for U.S. diplomatic relations with the Republics of Ukraine and Byelorussia. This measure represents a call for action on the diplomatic plane. I am happy to see from the comments made by the National Review, in its May 23 issue, that growing public interest is being shown in this measure. Much can be done on other planes. The Free World Forum contains in its March issue an article written by Dr. Lev E. Dobriansky, of Georgetown University, on "American Policy and the Non-Russian Nations in the U.S.S.R." The article shows the grave defects of our policy on the psychological-informational plane. Many of the arguments developed by Dr. Dobriansky, who was on the National War College faculty last year, apply to the need for sober consideration of my measure on the diplomatic level. Because of its pertinence to a very basic and yet scarcely explored issue, I ask that this article be printed in the RECORD.

AMERICAN POLICY AND THE NON-RUSSIAN NATIONS IN THE U.S.S.R.

(By Lev E. Dobriansky)

Moscow's propaganda for internal consumption emphasizes repeatedly that the non-Russian Republics are "independent." According to the Kremlin, this "independence" was achieved by each of the non-Russian nations largely through the efforts

of the big Russian Communist brother. In recognition of this, the Lithuanians, Ukrainians, Georgians, and others willingly and independently joined their Russian brothers in preserving the union. The Soviet Union is thus a federated union of many nations existing side by side in brotherly love. The constitution of the U.S.S.R. provides for secession, but this, after all, is a symbol of the strength of the union since it is unthinkable that any of the "voluntary" members would ever entertain the thought of seceding.

No bit of Moscow's propaganda can be more spurious. Behind the facade which is posed for the outside world, too, is the imperialist subjugation of these non-Russian nations ever since the entrenchment of Bolshevism in Russia itself. Yet the facade is powerfully meaningful. In contrast to the old empire, Moscow has had to counter with the pressing nationalist urges of the non-Russian nations now held captive in the new empire called the Soviet Union. On this the data are plain and overwhelming.

I

On the basis of the historical record these past four decades, commonsense would dictate that the West, and particularly the United States, should encourage and support the natural nationalism of these captive non-Russian nations. Instead, on the propaganda level, the opposite seems to take place in the United States. Last year the U.S. Information Agency decided to cut back its programs to several of these non-Russian nations.

The Agency's decision eliminated the Uzbek language program and curtailed the Baltic, Ukrainian, and Georgian language programs beamed to the Soviet Union. This decision cannot be said to rest solely on an alleged technical argument of transmitter shortage. Instead, it clearly reflects certain policy directions for the Voice of America which are ill advised. One ought not believe that the decision arrived at by USIA and perhaps also by the Department of State is the result, in any degree, of any subversive Communist influence operating within these areas. Rather the decision seems to be the product of considerable misunderstanding as regards the nature of our mortal enemy, the aspirations and requirements of the captive nations both within and outside the Soviet Union, and as regards the modes of effective appeal to the subjugated non-Russian peoples in the U.S.S.R.

To any informed person the broad non-Russian periphery of the Soviet Union is the solar plexis of the Russian Communist empire. Its youth make up about 50 percent of the armed forces of the U.S.S.R. In over three decades of Russian Communist domination, the non-Russian colonies within the U.S.S.R. consistently resisted Russian power and rule. From these facts alone it should be obvious that, in terms of U.S. security interests, the non-Russian nations in the U.S.S.R. constitute a high priority target for U.S. information and propaganda. A broadened and skillful aim at this vital target would successfully turn the tables on spurious Russian propaganda concerning colonialism, nationalism, and independence in Asia and Africa.

Moves along these lines of curtailment were first indicated in an article written by Earl H. Voss.[1] The article showed that thought was being given to the elimination of the Uzbek broadcast and also to the possibility of imitating BBC in having only the Russian language broadcasts beamed to the U.S.S.R. The latter implies, of course, the abolition of the other non-Russian language broadcasts, such as the Lithuanian, Ukrainian, etc. In his reply to many inquiries the USIA Director stated that a study was being made along these lines.

[1] Washington Sunday Star, Jan. 19, 1958.

Close observers of the situation felt that such proposals to contract VOA in these and, later, other areas of the Communist empire were tied up with a move to be soft toward the Russians in preparation for a summit conference at that time. The reader must recall that this was the period of another large-scale push for a summit conference. Developments concerning VOA cannot be understood in void of this empirical context. In the initial stage, discussions with USIA authorities disclosed not even an allusion to any problem of transmitter shortage that would compel the curtailment of the non-Russian language programs. Instead, authoritative concern was expressed about the unfavored prospect of "splinterizing" the Soviet Union. Moreover, through cultural exchanges and similar arrangements the USIA felt that we could make solid strides toward peace with the U.S.S.R.

It was quite clear then, and is so now, that some of these authorities fail to understand the major problems of the Soviet Union or, more accurately, those of the Russian Soviet Federative Socialist Republic in its domination over the non-Russian nations within the U.S.S.R. As shown by their official communications, for example, these nations are merely minority groups with minority languages, as though they were counterparts to the minority groups in the United States. If the blanket of U.S.S.R. were legalistically thrown over Poland and it become a republic like Lithuania or Ukraine, then, according to their lights, the Polish Nation would become another minority group. These points are crucial to the issue at hand. The effectiveness of VOA depends on the content and direction of its programs and only secondarily on the quality and quantity of its technical instruments.[2]

On the basis of original suspicions on the correlation between the summit push and the proposed changes a number of American organizations prepared a memorandum on "The Prospect of Another Summit Conference." In their behalf, at the end of April, Senators H. ALEXANDER SMITH and PAUL H. DOUGLAS and also Congressmen WALTER H. JUDD and MICHAEL A. FEIGHAN jointly presented this memorandum to Secretary of State Dulles. In the discussion of its contents the Secretary of State expressed his wholehearted agreement with the views and recommendations set forth in the memorandum. Significantly enough, point four in the memorandum calls for increasing the number of non-Russian language broadcasts to the U.S.S.R. It is little wonder, then, that Senator DOUGLAS was later aroused to say: "It is * * * shocking to learn that the Voice of America is now engaged in a series of actions which do violence to one of the major proposals with which Secretary Dulles expressed his agreement."[3]

This background to the transmitter shortage pretext for the curtailment of the several non-Russian language broadcasts to the U.S.S.R. invites certain remarks concerning the content effectiveness of VOA. The reason why we lag far behind Moscow in effective propaganda appeal is explained in a significant passage in one of Vice President NIXON's latest addresses. Speaking to the Harvard Business School Association last September, Mr. NIXON stated in effect that the way to combat Russian Communist imperialism and colonialism is to revitalize the American Revolution. He urged that we should be standing for, not against, the nationalist movements in other countries. As he put it, "it is ironic in the extreme that the United States should ever be cast in the role of opposing legitimate nationalist movements. Many of the ideas which motivate today's nationalists stem from American history and have ben taught in American universities at home and abroad. * * * We, rather than the Soviet Union, should be the natural champion of legitimate nationalist movements." How true this is, especially among the non-Russian nations both within and outside the U.S.S.R.

If allowed for a period of time, the changes effected by USIA will work to Moscow's advantage. They will actually work in behalf of Mr. Khrushchev's aims as conveyed to Mr. Adlai Stevenson on his recent visit to the Soviet Union. "Mr. Khrushchev was saying," Stevenson reports, "that whatever goes on in the Communist world is a family affair and doesn't concern outsiders, that Soviet oppression of the uprising in Hungary in 1956 was not interference, and that Soviet pressure on Yugoslavia to conform to Moscow is not a case of meddling in another country's affairs. But Khrushchev also made it clear that what went on in the free world is a proper concern of the Soviet Union."[4] These are the same aims that Khrushchev has endeavored to realize through a summit meeting.

It must be emphasized that this issue has absolutely nothing to do with official talk and programing leading to premature revolt and the like. It has to do with policy wisdom and propaganda efficiency. The Voice of America is not only a technical instrument for the transmission of factual information, it is also a psychological weapon employed for the prime purpose of influencing minds and hearts to the justice and political integrity and intentions of our side in the global struggle. Some official statements on the aims and purposes of VOA leaves one with the distinct impression that the Voice of America is simply an innocuous medium set up to inform the rest of the world about what Americans are doing in their everyday existence and living. They just don't seem to evince a propaganda acumen aimed at progressively weakening the enemy by carefully designed programs and words. There doesn't seem to be that ardor or fervor in the agency to undertake those things implied by Vice President NIXON.

II

Let's look, then, more directly at VOA's recent changes. They are (1) the elimination of the regular 15-minute daily program in the Moslem Uzbek language beamed from Munich to Central Asia, (2) the reduction of 1 hour each in the daily Lithuanian, Latvian, Estonian, and Ukrainian programs, and (3) an increase in English-language programs beamed to the U.S.S.R., as well as a half-hour increase in the Russian-language program.

These changes will have some unfavorable bearing on U.S. relations with the Moslem peoples, not only in the U.S.S.R. but also with those knowledgeable Moslems in Asia, Africa, and the Middle East. Our relations, such as they are, with the other non-Russian nations in the U.S.S.R. will likewise be adversely affected. These changes lack adequate justification. In fact, they possess all the earmarks of the first step in a policy of psychological disengagement with regard to the entire Russian Communist empire.

According to USIA officials, the reasons for these changes are several. Concerning (1) the Uzbek program, they are allegedly (a) to maximize our use of available transmitters, (b) insufficient evidence as to whether this program was being heard to an appreciable extent, and (c) a scarcity of available funds, or transmitters or of qualified personnel. On close examination these reasons for eliminating the Uzbek program are weak, to say the least. While Moscow today is build-

[2] See the excellent article by C. L. Sulzberger, "Moscow's Huge Colonialist Hoax," New York Times, Mar. 1, 1958.

[3] Hon. PAUL H. DOUGLAS in the CONGRESSIONAL RECORD, Aug. 22, 1958.

[4] Washington Evening Star, Aug. 27, 1958.

ing tremendous radio facilities in Tashkent to influence the free Moslem world to its way of thinking, we have decided to abolish the only meager program in VOA aimed at the unfree Moslems in central Asia. The New York Times indicated the absurdity of this change.[5]

Just contrast this with the spirit that inspired the message of Secretary of State Dean Acheson on June 29, 1951 when VOA broadcasts to the Turkestani, Volga-Tatars, and the Moslem Azerbaijani were commenced. He declared:

"The people of the United States have a friendly regard for the Moslem peoples of the U.S.S.R. The proud history of the Tatars of the Volga who have maintained their ancient culture and traditions despite all obstacles; the brave Azerbaijanis and other mountain people of the Caucasus whose centuries-old struggle for their human rights have provided some of history's most glorious pages; the people of Turkestan whose ancient cities of Bokhara, Samarkand, Merv and Tashkent represent monuments of a lofty culture; these, like the other God-fearing peoples of the Soviet Union are regarded by us Americans as stanch pillars against atheistic, materialistic tyranny.

The Voice of America will henceforth bring you in your own language the truth which the Communists fear and try to keep from you. We shall tell you what is happening in the free world and particularly in those regions of the free world linked with you by religion, tradition and culture. We shall keep you informed of the aggressive actions of those disturbing the world peace. We shall tell you how freemen are standing firm against the further spread of despotism.

As I said last month to the people of Georgia, "the goal of the American people and their Government is a peaceful world where all men can live and work freely and happily, without want or fear and with the right to worship God in their own way. This is our vision of the future; we invite you to share it."

On the basis of known facts, one could add to this splendid message the spirit of nationalism which the various Moslem nations and peoples in the Russian Communist empire share with their brethren in the free world. This nationalistic force, which we are not tapping at all, is even more important than their common religion.

In terms of political rationality and advantage, it is evident that if transmitters are to be usefully maximized, they certainly should be in the direction of the Moslems in central Asia. There is considerable more evidence demonstrating Turkestanian opposition to Russian communism and its imperialist colonialism over the past 40 years than can be shown in favor of the Russians against their own Moscow regime. By political analysis the 35 million Moslems in the U.S.S.R. have a higher target priority over most of the areas in the free world to which we beam VOA broadcasts. Second, the reason of insufficient evidence on the reception of this program raises the question as to what kind of evidence USIA is seeking on the basis of an admittedly puny operation directed at these people? Clearly, if the problem were understood properly it would be plainly recognized that the cause-and-effect sequence is really the other way around: this is a vitally important target area; thus we must have an effective program; therefore, resources must be made available to it, even at the cost of less important areas.

III

USIA's reasons for cutting down the Baltic and Ukrainian language programs are as follows. It is contended that (a) such reductions will permit a more concentrated use of transmitters in order to overcome the heavy jamming of these programs and (b) the concentration of transmitters on particular programs necessarily decreases the number of programs which these transmitters can carry. The extra time, however, will be devoted to English language programs beamed to the U.S.S.R. and, by way of a half-hour increase, to the Russian language program, both of which, quite significantly, are not subjected by Moscow to such heavy jamming.

The question remains: "Why does Moscow jam these particular non-Russian broadcasts most heavily, whereas our English and Russian language broadcasts are less or not jammed at all?" One can only reasonably infer that Moscow fears these latter broadcasts less. This striking fact of disproportionate jamming is indeed a sound point of departure for an inquiry into these cases and also the relative contents or sensitive aspects of these programs. Commonsense would dictate steps of concentration and expansion of the non-Russian broadcasts because of the excessive jamming.

The plausilbe point is made that these changes, by virtue of transmitter concentration, will enable us to overcome the heavy jamming. This is all to the good. But it does not in itself justify the allocation of the extra time to the English and Russian language broadcasts. Indeed, with concentration of transmitters for the non-Russian language broadcasts, this time and more should be devoted to these evidently more sensitive programs. As in the Moslem case above, there is again much more evidence to show that we have considerably more to gain by concentrating on these Baltic, Ukrainian, and other non-Russian broadcasts to the U.S.S.R. than on either the English or Russian language programs. That is, unless our self-defeating goal is eventually to imitate BBC and have these non-Russian nations in the U.S.S.R. listen, if they will at all, in the language of their captor. The changes made are certainly in this direction, one of psychological disengagement.

For the moment let's agree that transmitter concentration necessarily decreases the number of programs. Still, why more time and programs for Russian and English language broadcasts? For, applying USIA's formula, this presumably means more programs on fewer transmitters per program. Here, too, one runs into a priority valuation. Very simply, if it is conceded that the U.S.S.R. has top priority for our broadcasts, then why can't more transmitters be made available at this time to our broadcasts to the Soviet Union at the expense of less sensitive programs to areas with lower priority? This is another sensible alternative and in accord with the view that the purpose of this Agency was to combat the propaganda of the Soviet Union.

IV

In the eyes of some USIA officials the languages of the Lithuanians, Latvians, Estonians, Ukrainians, Turkestanis are minority languages of minority groups. This, perhaps more than any other fact, explains these unthought changes. The recent study of the Senate Judiciary Committee on "The Soviet Empire: Prison House of Nations and Races" and many other studies, particularly those of the Select House Committee To Investigate Communist Aggression, show that the non-Russian nations have striven desperately to preserve their distinctive languages and other cultural identities against the russification programs of Moscow.

The recourse to expanded English broadcasts to the U.S.S.R. appears almost as out of place in terms of the global psychological conflict. The present movement in American education is to have our people learn the languages of other peoples primarily in order to understand them better, to make warm contact with them. Evidently the tendency in the Voice is contrary to this movement and its objectives. USIA's fantastic formula is: Reduce the programs in the language of the masses, have them listen more in the language of their captor, and the relative few who wish to perfect their English, very likely for political ends against our own interest, let's accommodate them, too.

In conclusion, then, to predicate these politically unwise changes on the technical ground of transmitter shortage is in itself cause for wonderment concerning the objectives and purposes of VOA, especially in relation to the logically high priority targets within the Soviet Union itself. Moreover, the manipulations of time and facilities in favor of English and Russian language broadcasts at the expense of the more sensitive non-Russian broadcasts—and this despite the general condition of transmitter shortage—only serve to intensify this wonderment. Also, one cannot but seriously question the preferred technical argument. If the non-Russian areas in the U.S.S.R. are objectively recognized to be high priority targets existing in the immediate environment of the Russian Communist enemy, then it would appear that a reallocation of transmitters is in order—at this time even at the expense of low priority areas in the free world. In this connection, one might ask whether any thought had been given to the use of our floating transmitters for broadcasts to the Ukraine, the Baltic area, the Caucasus, and Turkestan? Why couldn't these be used somewhere near Turkey or Pakistan to meet the requirements of these high priority target areas?

Furthermore, if jamming is characteristic of VOA broadcasts, it must be equally so for Radio Liberation broadcasts out of Munich. In considering immediate alternatives, has a joint use of Radio Liberation transmitters been considered in the interest of economy, efficient concentration, and plain propaganda effectiveness? All sorts of legalistic reasons for not considering Radio Liberation at this present moment of supposed transmitter urgency will not do in the light of all facts in the situation. The plain fact is that this whole problem, from policy to action, hasn't been seriously and thoroughly thought out. Striking advantages thus continue to elude us.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Marys, Pa., Daily Press of Saturday, May 23, 1959.

FOREIGN AID

Each year about this time the American people are told that every cent the White House asks for foreign aid is vital and any reduction of the amount requested would imperil America's standing abroad.

The truth of the matter is, American prestige in most parts of the world never was high, and is in the lower brass ranks now, despite some $70 billion that have been shipped abroad within the last decade or so—money extracted from your wages or salaries in the form of income tax or indirect levies on what you have to buy.

Of all the millions that have been sent to Yugoslavia, this country has no guarantee

Marshal Tito would not turn against us in event of trouble.

Sending money overseas has won no friends for the United States, rather petty jealousies, bickering, and wondering why more money wasn't sent.

In helping other nations regain their contemplated economies, to help people with their agricultural programs so the hungry can be better fed, is okay with most Americans and creates no argument—it's the outright giving of cash and military assistance that casts a shadow of disappointment over some phases of any foreign aid measure.

Time after time Washington has warned of the many serious things that will happen if one thin dime is slashed off the asked foreign aid amount. In many cases the asked amount has been reduced to some extent without dire consequences.

If all foreign aid were cut off abruptly it is doubtful if anything of danger would happen. It has become an annual bugaboo that has cost the taxpayers of the United States billions of dollars that otherwise could have been used to reduce the national debt, slash income tax payments, build new schools, hospitals, and back public housing developments in the thousands from Maine to California.

The average taxpayer thinks of foreign aid as being something entirely apart from his way of life without realizing his tax dollar is what is supporting it.

Our Plan To Welcome Khrushchev When and If He Comes Over Here

EXTENSION OF REMARKS
OF
HON. ROBERT R. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. BARRY. Mr. Speaker, under leave to extend my remarks, I would like to bring to the attention of the Congress and of the Nation, the suggestion contained in the editorial of Mr. Oxie Reichler, distinguished editor of the Herald Statesman, of Yonkers, N.Y., that the American people greet Premier Khrushchev with dignity, restraint, and silence, should he visit our shores:

The editorial follows:

[From the Yonkers (N.Y.) Herald Statesman, May 21, 1959]

OUR PLAN TO WELCOME KHRUSHCHEV WHEN AND IF HE COMES OVER HERE

If Nikita Khrushchev, Premier of Soviet Russia, should come to the United States of America—and it begins to look as if he might be coming sooner or later—it is the Herald Statesman's hope that we Americans will exercise restraint in our curiosity and definitely curb our traditional spirit of welcome to visitors.

There are reports that Mr. Khrushchev has been renewing his pressure for an invitation to the United States, to an extent which may make such a bid inevitable. Besides, if a so-called summit meeting is held this summer, it may well be in the United States.

It is obvious that we substantially overdid our welcome to Anastas Mikoyan, the Soviet Deputy Premier—to an extent that not only irritated many sober-minded Americans but infuriated many to behold such maudlin sentimentality over one of the masterminds in the butchering of political enemies or innocents, and in vast inhuman acts of cruelty and worse, not to mention the maltreatment and kidnaping and slaughter of our own fellow countrymen.

We suggest that the Herald Statesman plan for a Khrushchev visit be applied nationwide from the moment he steps onto our shores.

Let him have his official and informal greetings from the President, as required by protocol, but let us forego the invariable crowds, the cheering, the fulsome adoration which we like to shower upon a foreign dignitary.

Let him have his ride up Broadway, if that is essential, but with no ticker tape, no glad outcries of welcome. If there are people along the curb, let them try hard to be silent.

Absence from the Soviet Premier's route, from the places where he speaks, and silence on the part of passersby—these can be more potent than the occasional picketing and placarding and the other usual implements of protest.

Let America give Khrushchev the kind of treatment we should have given Mr. Mikoyan. This would demonstrate our national respect for freedoms, which both so often threaten to take away from us as they have from their own people and from the satellites they have seized.

By silence we would be giving "voice"—in the most stentorian manner possible—to our opinion of Khrushchev's betrayal of every agreement at Geneva 4 years ago, his harsh oppression in Hungary, his blackmailing of every member nation of the North Atlantic Treaty Organization (NATO), his runout on the reunion of the two Germanys, his harassment of Berlin, and his incessant threats to destroy the West with hydrogen bombs.

If we love freedom, we can show him—by acting like intelligent and self-respecting human beings—our revulsion against Communist enslavement of peoples and nations, and our opinion of the Communist program of constant threat to destroy the free world and to launch World War III unless we appease its insatiable maw.

If Communists—whether in Soviet Russia or in China or elsewhere—choose to act like brutes and bullies, who must always get their own way without resistance, we must try to make their leaders understand that the time has come for a revival of decency, courage and no surrender.

Our silence and indifference can be a valuable weapon in the cold war—far more effective and dignified than hypocritical adulation. Isn't it worth a trial?

Cancer, Air Pollution, Viruses

EXTENSION OF REMARKS
OF
HON. HUGH Q. ALEXANDER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. ALEXANDER. Mr. Speaker, in the growing search for the cause of and cure for lung cancer, as yet the answer has not been found.

In the case of lung cancer there are many theories, but no proof as to the cause and cure. In the search for the truth, I add to my remarks two releases by the United Press, respectively dated May 9 and May 11:

ST. LOUIS.—A possible connection between caffeine and cancer was seen in a paper presented today to the 59th meeting of the Society of American Bacteriologists.

Mrs. Pat Lingle, a graduate student working in the Southern Illinois University research laboratory, Carbondale, said experiments showed caffeine can "stunt the growth" of living cells. The experiments conducted by Mrs. Lingle and Mrs. Carl C. Lindegren, wife of the laboratory director, were made with yeast cultures.

They reported that some cultures are more resistant than others, but the cells of all the cultures underwent some mutations at a caffeine dosage of two-tenths of 1 percent.

Dr. Lindegren said that these resemble cancer cells in being unable to breathe.

CAMBRIDGE, MASS.—A prominent research scientist said today that virus-like phenomena could be responsible for all types of cancer.

If true, said Dr. S. E. Luria, professor of microbiology at the Massachusetts Institute of Technology, it might become possible soon to postulate a drug cure for cancer.

Luria made the statement in reviewing the evidence of his own and others' work in the field of virology and microbiology. His studies have been supported for many years by the American Cancer Society.

Luria said his conclusions were based more on analogies than on firm knowledge about the relationships between viruses and cancer.

Drug treatment of cancer would be possible if cancers reacted the same as virus-infected cells.

Luria said that the chemical secrets of viruses were rapidly coming to light, and primitive but successful chemical attacks already have been made against them.

The Wailing Wall

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 18, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks there follows an article appearing in the Juvenile Court Judges Journal, published at Pittsburgh, Pa., under date of April 1959. It contains an excellent message and was written by the Honorable James P. Gossett, probate judge of Gooding County, Idaho:

THE WAILING WALL

(By James P. Gossett)

(A western judge speaks: How a wealth of local resources of people and good will can be found in almost any rural county of our land is shown in the accompanying article by Judge Gossett. Born and raised in South Carolina, Judge Gossett was graduated from Yale University, is a world traveler, has operated a ranch on the Snake River in Idaho, and, as his article shows, is a writer of note. His message should be particularly interesting and inspiring to judges in rural counties—and these constitute the vast majority of our judges of children's courts—because it shows how the judge, by improvising, can match the efforts of the large courts with all their experts and specialized facilities, by using "The Acres of Diamonds" in his own backyard.)

There is prevalent among the judges of the less populous juvenile jurisdictions an unfortunate negative attitude toward what they are able to accomplish. It derives from their lack of facilities compared with the courts of metropolitan areas. The title I have chosen for this piece is apt, I think, because the lament of these judges is indeed

raising a wall between themselves and effective functioning among their charges.

My State ranks 12th in area but 43d in population. Except for the concentrations in and about our few cities, our people are strewn to the four winds within our borders. My own jurisdiction consists of one of the smaller counties without a city of any size, and the problems incident to meager facilities are not new to me. I too must plead guilty to a share in the agonizing mentioned above.

However, I was once told by one of the most prominent jurists in the land that as necessity is the mother of invention so is dedication the progenitor of inspiration. Over the past decade I have found this to be substantially true. So obsessed do we become with our physical deficiencies that we lose sight of the transcendent values of our purpose; and in so doing we fail to recognize the advantages that accrue to us. It has been my experience that as my interest in and appreciation of the problems of my young people increased, roads over, under, and around obstacles imposed by lacks were opened by the larger view of must.

Certainly the less heavily freighted juvenile courts have circumstances favoring their efforts that cannot possibly exist for courts through which traffic is heavy. Not the least of these is the proportionately greater amount of time that can be by the judge devoted to the individual case. If the judge is the figure in his community that he should be, no amount of effort put forth by delegated jurisdiction in the form of social worker or probation officer—however devoted—can possibly have the same impact as an equivalent amount of time and effort expended by the judge in person. The judge's first-hand acquaintance with such vital factors as family, neighborhood, school influences and associations, economic status, religious proclivities, and a thousand and one individually personal things give to him the opportunity for made-to-measure dispositions that avoid stereotyped sterility.

The more intimate personal relations that obtain between the residents in a small community constitute a pool of resources for judges with courts like mine that is seldom, if ever, found in big city jurisdictions. "Everybody knowing everybody else's business" has a way, if properly employed, of making for a community sense of responsibility for the community's children. And there, I believe, is one of the great keys to our common urgent problem: the creation and sustaining of a community sense of responsibility among our adults for all the children.

The way, of course, to achieve this end is to promote the greatest possible adult participation in children's activities—both good and could be better activities. Here success feeds upon success in an arithmetic progression that is astonishing. In our community we have attempted to transplant the theory and the spirit of the 4–H and Future Farmers of America movements that have, out here anyway, been so outstandingly successful.

JUNIOR DEPUTIES

A project that has prospered us has been the "Junior Deputies." The sheriff in this part of the country is still a very potent personality. Our sheriff and his deputies are personable young men, and all veterans of World War II. Playing those two facts to the hilt, we have built a Junior Deputies program in which membership can be had only by qualification as to character, behavior, attitude, etc., over a candidacy period. There is a long and impatient waiting list.

While we have no Big Brother organization as such, we do have a number of groups that perform the same function, and I believe—forgive me—with a bit less ostentation and possibly condescension. In these instances the overlapping and interlocking of the day-to-day lives of small community people have been worked to advantage. Civic groups and church groups have more cohesiviness and better definition of purpose in their work among young folks. Our churches particularly have worked minor miracles with teenage groups that, among us, would otherwise be hard put to find constructive use for leisure. These groups have successfully developed the fellowship end product that in large cities frequently takes a much more unsavory shape.

Having only State-employed social workers, and very few of them, and no such thing as school visitors, we have had to go directly into the schools for help along those lines. It is not at all infrequent for a school superintendent, or principal, or a teacher to accept full responsibility as a child's parole officer. It may sound strange but it is nonetheless true that our school personnel have been about our most effective custodians.

In this connection it appears that in some ways our big systems may have gone in too much for specialization, which, no matter how learnedly applied, cannot but mean—to a degree—diversity of aim. Cooperation of school people has been all that could be asked and much, much more than would be expected by those who haven't tried it. Far from being the result of a potpourri of experts, such success as we have had has been attained by placing as much of the child's life as we could over a common denominator that was more or less natural and understandable to the child.

Being a nonpopulous jurisdiction, the closer connections between the court, the parents, the schools, the law-enforcement people, the adult community and other public agencies has made possible a mutuality of responsibility and of aim with a minimum of antagonism. A few thousand people can be reached almost individually through groups, and made aware of problems—and their answers—in a manner impossible to achieve in a big city. And I am sure that I need not assess the importance to awareness and understanding.

A judge who can live with and among those within his jurisdiction has an undeniable advantage. An elected judge in a small community cannot but have the blessing of most of his people if he is of them. True, we have to use our county nurse occasionally as an investigator; but we get pertinent details in her reports that the professional snooper with a masters degree more often than not overlooks—and they are always sympathetic objective reports. True, we may have to have Mary's English teacher hold her driver's license and issue it to her only on special occasions in order to teach Mary that driving a car is an adult privilege requiring an attendant sense of responsibility. But then, Mary usually thinks her English teacher is "cool" anyway, which helps.

As long as the load permits I would much prefer to make my own decisions and dispositions in the case of every single child brought to the attention of the court. I was a pretty mean blankety-blank myself, and I think I generally have a pretty fair idea of what's going on in the brain behind that tearful, resentful, or even belligerent little face. I think I would rather have the decisions made tempered by my own apprenticeship at adulthood than strained by the cold, untrammeled professionalism of a doctor's degree.

My editor and I don't fight, because I write for his paper; my sheriff and I don't fight because we are good friends on and off duty; and our wives are socially acceptable each to the other; my county nurse (my social service in toto) and I don't fight because our offices adjoin, and she can't get along much better without me than I can without her.

Because I am a "catch-all" probate court that handles everything but bedpans, I come in official contact with most of the adults within my jurisdiction sooner or later, and because I am a "joiner," I come in unofficial contact with most of them anyway. They know me—and about me—and I know them—and about them. All of that makes for an even break at the starting gun: something neither the big city authorities nor its children often have. For a judge who knows what he is trying to do and who really wants to do it, that constitutes a large segment of sufficiency.

A Machine That Does Research

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 27, 1959

Mr. VANIK. Mr. Speaker, at the School of Library Science of Western Reserve University in Cleveland, Ohio, a center for documentation and communication research has been established to document and expedite scientific communication. This center has also pioneered in plans for the creation of a national center for the coordination of scientific and technical information.

I recommend serious consideration of the following article by Allen Kent, associate director of the center for documentation and communication research, School of Library Science, Western Reserve University, which appeared in the April issue of Harpers magazine entitled "A Machine That Does Research":

A MACHINE THAT DOES RESEARCH

(By Allen Kent)

A new kind of electronic brain, now being developed in Cleveland, can pick out a sliver of vital information from a haystack of unwanted papers—and may save millions of dollars and countless hours of labor for American scholars and businessmen.

Not long ago the director of a large engineering organization was chagrined to discover that his research staff had spent $50,000 and a year's time in repeating an unsuccessful design program for building military trucks that he himself had rejected 10 years before. For a decade the original research report had lain buried in the company library.

An official of Pan American World Airways heard about an unclassified 85-page report on air cargo that had been prepared at the Stanford Research Institute in 1956. He wrote to Stanford to get it and enclosed a Pan Am purchase order.

"Sorry, we did this for the USAFHQ, DCS/D," Stanford replied. "Why not write them?" (Stanford's reports are the property of its clients, he learned later.) He wrote again, with a new purchase order, to the Air Forces HQ, DCS/D, requesting a copy of the booklet.

"Sorry, they're all distributed; don't have any. Try ASTIA," came the reply.

He wrote a new purchase order and letter to ASTIA in Dayton.

"Sorry, you're not qualified to receive this report. Try OTS."

Another letter, another purchase order, this time to OTS, Department of Commerce in Washington. To that, he received no reply whatever.

I agree with the man who told the story that Pan Am had a need and a right to know

how to solve this problem. But whose responsibility was it to make that report available? * * *

In 1950, an article on the application of Boolean algebra to electrical circuits appeared in a journal of the Soviet Academy of Science, and though an English abstract was later published in Mathematical Reviews, it was not "discovered" until 5 years later—after several teams of mathematicians in a variety of American industrial concerns had spent more than 15 man-years in unsuccessful attempts to solve the problem. * * *

American industrial and scientific research is littered with examples of inefficiency like these because obsolete library methods can neither keep track of the mounting volume of scientific and technical research, nor make it accessible in a hurry. An executive of a large steel company has insisted that it is cheaper to repeat an experiment if the cost does not exceed $100,000 than to pay for a search to determine whether it has been done before. And Thomas Vaughan, vice president of Colgate-Palmolive, has guessed that if better library methods could cut only 1 percent of the research worker's time, they would save American industry something like $20 million a year.

This torrent of new knowledge comes from Government agencies, universities, and industries here and abroad. Internationally, there are about 50,000 journals in the natural and physical sciences. Chemical Abstracts, an American publication indexes some 100,000 articles a year, and special libraries throughout the country draw on over 300 various abstracting and indexing sources. The U.S. Patent Office admits to being almost 4 years behind in searching applications for patents.

In 1955 Vannevar Bush urged the Patent Office to explore the techniques of automation for speeding up their work.[1] In that same year, with a similar but broader objective in mind, Western Reserve University in Cleveland initiated a far-reaching program to improve library methods in its new center for documentation and communication research. Western Reserve has natural assets for the job: its school of library science, which fosters the center, is one of the oldest, best known, and most progressive in the country; and Cleveland's industrial and research facilities offer a rich source of support. The center's chief outside sponsor from the start has been the American Society for Metals, and scores of sponsors and customers for its various services now range from firms like Union Carbide Corp. and General Electric Co., to Duke University, the U.S. Army, and the U.S. Air Force.

The program began small but it has rapidly gained momentum. From the beginning it has been closely integrated with the school of library science, and the school's dean, Dr. J. H. Shera, is the center's spokesman and a national leader in the new field of documentation. But in view of the magnitude and complexity of the research needs of modern science and technology—and of the caution with which responsible government officials are obliged to come to decisions—the center's main advantage is a human quality. Its men and women—from Western Reserve's president, John S. Millis, to the part-time graduate assistant—are dedicated to the idea that a reasonable approach to the staggering problems of scientific communication can be found. Important tangible results have come much faster than we ever expected—when a few of us used to get together a short 5 years ago and talk. James W. Perry, who is now director of the center, was then a library fellow at Massachusetts Institute of Technology, and I was associated with him there.

[1] The Office now has a long-range program dealing with the use of electronic equipment in its searches. It is called "Haystaq."

But Western Reserve—and the Nation's research effort—have a long way to go; and in this field no organization can go it alone.

CAN WE SPEED UP THE LIBRARY?

The focus of the rapidly expanding program of the Center for Documentation is its electronic research machine—called the Western Reserve searching selector—designed and nurtured by J. W. Perry. The machine is now installed in the bare second-floor master bedroom of a converted brick and stucco house on fraternity row where the Center is housed, and it rattles along noisily 8 to 10 hours a day. With the assistance of human operators and a Flexowriter which is wired into it, the machine scans the encoded abstracts of scientific articles and produces in typewritten form a bibliography of existing knowledge on a given problem. It can work on 10 questions simultaneously.

Early next year, the present selector will step down to the status of student-trainer, and a new high-speed machine now being built by General Electric will take over. With transistors instead of tubes in its innards and magnetic tape instead of paper tape in its craw, the new machine will hum not rattle, and will flash the red light indicating a fruitful connection 5,000 times as often. But even this new electronic searcher will be only part of a pilot project for a greater design.

The centers' staff of about 50, many of them women, is sprinkled liberally with graduate students in a new branch of library science, working part time—for pay, for love of research, and for master's and doctors' degrees. The center's first doctor of philosophy's hope to graduate this September and will be qualified professionally as documentalists to take jobs in industry, government, and university libraries, at salaries a third higher than those of the usual doctor of library science. For the library of the future will not be a cloister, presided over by a kindly spirit withdrawn from the turmoil of the outside world, but a throbbing nerve center of commercial, scientific, and industrial research.

I am well aware that this picture may be horrifying to conservative scholars—but the historical and linguistic implications of this intellectual experiment are exciting, too. Because much of the work of any research and communications center depends on translation and language analysis, a foreign tongue and symbolic logic may be more useful tools for some specialists than electronics.

At present, the program at Western Reserve centers mainly on metallurgy. Through the cooperation of the American Society for Metals, we receive journals from all parts of the world. Graduate students, acting as subject analysts, prepare detailed abstracts of the important articles, encode them into machine language, much as a clerk codes messages for transatlantic transmission into cables. Punched into standard IBM cards, these abstracts are then automatically checked against a code dictionary, which is also on IBM cards. One of the center's tasks is to develop this dictionary of punched cards, whose terms and phrases bring in related generic concepts and broaden the reference which the research machine will produce on a given question. For example, the code for induction furnace will permit searches not only for that term, but also more generically for electrical heating equipment or electrical equipment or heating equipment or heating.

Once the dictionary meanings are transferred to the punched cards of the metallurgical abstract, the units are transferred (automatically) to punched paper tape. These rolls of tape, each covering about 50 abstracts, are stored in small paper boxes (5 by 6 by 1½ inches in size). Stacked on a table or lined up on a shelf, a hundred of these boxed rolls of tape contain the basic findings, encoded in machine language, of thousands of scientific journals. These rolls constitute the library. The WRU Center also keeps the uncoded abstracts and copies of the original articles, filed in the traditional manner and identified by the serial number of the stored code version.

HOW TO FIND THINGS OUT

When a request for a search comes in, the human operators encode the question, wire (or "program") the Searching Selector for that question, and insert the encoded "library" tape in the Flexowriter, which transfers the impulses by wire into the selector. The machine then rattles through its noisy routine of response and rejection (flashing white or red lights on its switchboard front to indicate misses or hits), and the Flexowriter (unmanned) types out on ordinary manuscript paper the serial numbers of the relevant abstracts. Obviously, the results can be sent anywhere, and the laboratory technician or inventor who asked the question can study the material at his own convenience.

During the past year—under a test sponsored by the American Society for Metals—trial customers ordered more than a hundred machine searches. Many of these would have taken a corps of librarians weeks or months to duplicate by conventional methods. For example, one company, working on a jet airplane, wanted to find a high-temperature-resistant metal possessing the optimum combinations of fabricating properties. The inquiry was expressed as a request for all the literature on "the formability of the sheet form of as many of the high-temperature alloys as have been tested." In this case, center staff clarified the question, encoded it, programed it, fed the library through the reading unit of the selector, and eventually sent the results to the customer in the form of abstracts of the relevant articles.

Since January 1 of his year, the center has been supplying a current awareness service to 10 industrial, university, and Government organizations—keeping them up to date on the current world output in metallurgy. This service not only guarantees nearly complete coverage of the field but cuts down on the time lag in library processing of journals.

The next step for Western Reserve will be to install the GE high-speed machine. Western Reserve is also looking for about $350,000 to stock the new library and train competent subject specialists. Such an investment would underwrite a model center for pilot searching operations of a convincing variety and size and would serve as a foundation for a national literature exploitation center. Small pilot projects in the main scientific fields (biology, biochemistry, chemistry, physics, mathematics) will require trainees with an undergraduate major in science, a master's degree in librarianship, and preferably some experience in the field in which they will be abstracting.

DO WE WANT A NATIONAL CENTER?

In theory, at least, automation in library procedures makes possible a national system of information facilities that will increase the efficiency of the research worker and safeguard our scientific and industrial progress. But strong disagreement exists among Government officials and professional experts in the field as to the degree of centralization that is desirable and as to the estimated cost of launching any national program. Whenever the subject comes up (as it came up in congressional hearings last spring, in a pioneering conference in Cleveland 3 years ago, in discussions—both public and private—by the National Science Foundation and the National Research Council), wild differences arise in the guesses about costs (one can't call them estimates) which are aired by the various experts talking at the moment. And as always in mat-

ters of technology and science these days, someone makes comparisons—in awe or horror—with the Soviet Union, which has a centralized research service employing 2,000 staff members.

On the question of costs, I believe that a budget of $36 million—to be expended over a period of 10 years—would suffice to create an effective national center of scientific information. (I have heard estimates that go up to $300 million.) At the end of this period, I think, these services would become financially self-supporting. In effect, the center would be handling a new form of publication—encoded on magnetic tape or other easily reproducible storage medium—and the returns would amortize the costs of machine searching among a large number of clients.

The existence of a national center would not prevent the formation of other, specialized processing centers, like many publishing houses, whose output might be purchased or rented by organizations wishing to operate their own research machines. At the present time many large industrial organizations, such as Du Pont, Union Carbide, and Smith, Kline, and French, independently process their own materials at enormous costs in duplicated effort. A well-planned network of specialized centers would make possible a blend of centralized and decentralized processing and use of research literature. At the present time, American industry and Government are paying no less than $1 billion a year (15 to 20 percent of the total national research expenditures) for the existing antiquated and uncoordinated system of information services. A few millions of dollars a year to launch an efficient national center would be modest.

It is difficult to clarify just where our responsible national authorities stand on this question. At the time of the congressional hearings in 1958, the National Research Council announced that it was going to establish an advisory board on information and documentation in science, to be aided by a small full-time professional staff. But this program has not yet been implemented. This winter, on Pearl Harbor Day, Dr. James R. Killian's Science Advisory Committee released a report on scientific information problems which proposed to expand and formalize one of the National Science Foundation functions under the name of "Science Information Service." The New York Times (one of the very few newspapers that attempted to cover this piece of nearly inscrutable news) headlined it "President Authorizes Formation of a Science Information Service." Rejecting the Russian centralized information system, Dr. Killian's release said that the new Science Information Service would assist, cooperate with, and supplement the many existing scientific information activities but would assume responsibility for none of them; it would be acting in "the best American tradition of private enterprise and Government working together for the national good."

The reluctance of the National Research Council, the National Science Foundation, and the Killian Science Advisory Committee, to act with respect to their several responsibilities in this field may result from their having been established at widely different periods of time, largely without reference to one another, and without any clear directive from Congress as to the authority of each. Be that as it may, excessive fear of centralization is as destructive as any other fear—and the chaos of our present no-system is all too real.

"REALLY SHATTERING"

With neither awe nor horror, we ought to take notice of what the Russians are doing; for—putting aside the cold war and weapons race—the problems of communication in science, technology, and other fields of knowledge are international, more today than ever before. If the Russians are finding answers where we are groping, it is compounding our stupidity to ignore them.

Last fall I spent 4 weeks in the Soviet Union (as part of a longer European trip) finding out what I could about the activities of the Soviet All-Union Institute of Scientific and Technical Information in Moscow (called VINITI). This vast enterprise, which now has a staff of 2,000 was set up in 1952 for the purpose of acquiring, analyzing, abstracting, and disseminating to scientists and engineers the world output of technical periodicals. It now receives 15,000 periodicals and processes nearly 500,000 articles a year; and it pays abstractors enough money to encourage competition for such part-time jobs. Russian abstractors get five times as much as American professionals, for whom abstracting is mostly a labor of love. By the end of 1957, a British scientist returning from a visit to the institute called its activities "really shattering * * * no other agency in the world is doing this job."

During those weeks in Moscow, I spent a good deal of time at the institute. I visited the editorial offices of the abstracting journals and expres bulletins which they put out, saw the products of their laboratory for electro modeling which is designing and building a machine to be used for storing and searching chemical information, and talked with Government planning officials and with linguists, logicions, mathematicians, chemists, and engineers. Finally, in a meeting with some 200 members of the staff, we batted the subject back and forth for 3 hours—the audience shouting the words that the interpreter and I could not get out.

Their response confirmed my impression that Russian scientists are keenly interested in the problem of creating a common "machine language" and a novel information machine for translating, searching, and correlating scientific literature by automatic means.

WHERE DO WE GO FROM HERE?

The United States has abstracting services galore—special librarians have listed 312 of them—but they are completely independent and uncoordinated in coverage, quality, and form of publication.[2] And their editors are in no mood to surrender their independence. There is considerable scattered research directed toward documentation, machine searching, and machine translating; but the programs of only 2 or 3 of the 45 organizations listed by a National Science Foundation survey show any real evidence of a coordinated atack on the problem. The Killian report mentioned above makes no clear recommendation on how a balance between centralization and decentralization services can be achieved.

The strong centralized system of the U.S.S.R.—which undoubtedly has economic advantages—is not, I believe, practical or desirable for this country; we are too far along on our own way. For us, it seems to me, the only reasonable course is the creation of a new type of library—a library of encoded information, prepared and stored on the spot, but available for searching, duplication, and distribution anywhere by machine methods. Many separately staffed abstracting services and libraries will operate; but there should be coordination on a national scale.

Internationally, a coordinated program for processing scientific literature is a technical possibility today, if technicians of the various interested countries can agree on philosophy, principles, and detailed codes. Western Reserve is planning a conference to be held in Cleveland next September which will bring together specialists in "machine documentation" from a dozen nations to work toward this kind of agreement. Scientific information processed by automation should not be any nation's monopoly.

As I see it, the plan that our Government should follow is threefold:

(1) We have to work with other nations in formulating a common machine language. (We should encourage the institute in Moscow to translate their abstract services into English and sell or exchange them in the United States simultaneously with the Russian editions.)

(2) We should develop a series of integrated national and regional information centers in the United States—to translate, encode, and make availalbe the world's scientific research reports.

(3) We should increase Government and private support of these efforts.

In any crash program, it is necessary to work simultaneously on several courses until the best one seems clear. In this program, the ultimate course will be the one that the research man—the industrial or scientific user of technical information—finds best. In the competitive American market place, the customer is right. It is an expensive way to make progress—the way of the rich—but let's get on with it.

The Russian Problem: From Ivan the Terrible to Nikita the Sanguine

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 21, 1959

Mr. O'HARA of Illinois. Mr. Speaker, history is basically a cumulative flow of events and happenings that makes the past always in some essential way present. This is true of our history as a nation. It is likewise true of Russia as an empire-building nation. History provides perspectives which are crucial to any intelligent understanding of contemporary issues and problems.

The problem of the cold war, for example, is viewed by some scholars as a permanent problem so long as the Soviet Union exists. Dr. Lev E. Dobriansky, who is a professor of Soviet economics at Georgetown University and also national chairman of the Ukrainian Congress Committee of America, shows in a recent article that the cold war phenomenon is a centuries-old Russian expansionist technique. Under the title of "The Russian Problem: From Ivan the Terrible to Nikita the Sanguine," the article develops a formula of understanding the Russian problem from the 16th century to the present.

By unanimous consent I am extending my remarks to include Dr. Lev E. Dobriansky's article from the March 1959 issue of the Ukrainian Quarterly:

THE RUSSIAN PROBLEM: FROM IVAN THE TERRIBLE TO NIKITA THE SANGUINE

(By Lev E. Dobriansky)

In the light of Russian political and diplomatic history the recent Mikoyan exhibition in the United States confirmed many established techniques of Russian empire building. Many Americans are unaware of these

traditional techniques and jump to the conclusion that Mikoyan's behavior was only a deceptive product of Communist tactics. A few even believed that the man was sincere and that the present rulers in Moscow are desirous of ending the cold war. In both cases a historical myopia prevails, along with an inordinate disdain for an institutional analysis which alone can insure some realism and maturity in our outlook toward the operations of a dedicated enemy.

Regardless of transient and momentary fluctuations in the behavior of the Kremlin, it can be reasonably argued that from the viewpoint of history alone the cold war is here to stay so long as the Russian colossus continue to breathe and unless a hot war, for one reason or another, should break out. Paradoxical as it may appear to some, the Mikoyan venture was a cold war instrument in application and its emphasis on Russian longing for peace was by no means the first of its kind in the long history of Russian empire building. It cannot be too strongly stated that in order to understand the current tactics of Khrushchev and company—the scientific feats, the economic challenge, the fictitious superiority of U.S.S.R.'s armed forces, etc.—the lessons of Russia's successful empire building in the past must be securely grasped. Pragmatic, day-to-day analysis and evaluation may make for sensational newsprint but they are no substitute for cumulative experience and secular judgment.

DOMINANT VIEWS TOWARD THE PROBLEM

Most of us realize that the world today is seriously challenged by what many regard as the challenge of communism. Some of us who are guided by the clear-cut evidences of history prefer to designate objects by their proper names, to call a thing for what it is, without fear or sentiment. Penetrating through the ideologic veneer, cold analysis will show that the challenge is one of the Russian problem. As in the past, this problem is being felt all over the world: in the Far East, in the Middle East, in Africa, in Latin America, and even here in the United States. But it is also being tragically encountered within the farflung borders of the present Russian Communist Empire.

The Russian problem is one that was born, cultivated, and shaped in a definite historical and cultural environment. It is assuredly not a problem that suddenly emerged, as many in this country suppose, in 1947, with the spurious origination of the cold war. Indeed, the problem and the cold war activity which it intrinsically engenders did not first come into existence in 1917, with the ascent of the Russian Bolsheviks. They are only creatures of the problem. If perspective and the secular institutional viewpoint are to be valued, the problem can be traced back to the very origins of the history of Russia which, more accurately, means the history of Muscovy.

How does one view the nature of the global Russian problem today? How has it come to be what it is? How does the West, and the United States in particular, understand it, its features, character, and portent? These are fundamental questions which are very infrequently raised and discussed. It is a truism that times change, but it is an attainment of truth to perceive the persistent being of things. By virtue of its technology and other assets the United States has changed radically and enormously since the beginnings of the Republic. Nevertheless, despite the manifold change, there is an institutional being in the Republic which has persistently attested to the preservation of individual liberty, relatively free economic enterprise, trial by jury, government by checks and balances, and a host of other traditional treasures of social existence. With rational and spiritual grounds of justification, it is an institutional habituation that has made it possible for us to maintain our unique cultural fabric. The same applies to other States and nations. The predominant force of tradition, especially abetted by unprecedented successes, applies also to the Russian and Muscovite segment of the Soviet Union. It is in this institutional context of being and becoming that the Russian problem is viewed here.

Before defining and analyzing this problem it would be well to consider some general views held in government and private circles with regard to the challenge facing us. One view may be called the sentimentalist view. It is based on the identity of human nature. After all, it will be argued, the Russians are a part of humanity; they are people like ourselves; consequently, they are subject to very substantial changes in habit and disposition. Those whose thnking is dominated by this view will quickly point to Russians who are highly cultured and of fine breed. The defendant of this superficial view will say, "You can't look upon these Russians as being barbaric and predatory. We should expand our cultural exchange programs in order to understand the Russians better and thus avoid a terrible world holocaust."

Doubtlessly the elements of this sentimentalist view are true, but they are misplaced. It is astounding how many of us live by short memories and, as a result, become susceptible to all sorts of passing fancies. Have we forgotten so soon that back in the twenties and thirties there were also cultured and warmly human Germans and Japanese? In fact, in the context of Western society, Germans by and large were quantitatively more cultured than can be said of the Russians. Moreover, it would be nonsensical to deny the civilization and culture of the Japanese people. Despite all of this, including the often overlooked fact that our accessibility to Germany and Japan was far greater that it is in relation to the Soviet Union, we did find ourselves in war. We traded with them, we talked, we exchanged; yet we ended in war. With a more conspiratorial and deceitful enemy, will these means perhaps work toward our own destruction, aside from having little to do with the avoidance of conflict? Be nice, understand, exchange are rather extraneous to the problem at hand.

Another prevalent and popular view concerns the conflict in ideology. This view may be properly designated as the misplaced ideologic view. According to it, we are fighting communism. This is the real enemy and threat to the United States and the entire free world. Proponents sometimes call this enemy international communism or Soviet communism or world communism, each being a vague abstraction that only befogs the issue. In comparison with other free nations, including England, the United States seems to unduly restrict the current struggle within the narrow limits of this ideologic doctrine. When we adopt this view, our approach becomes excessively rationalist and quite misleading. It is one which tends to shut off centuries of history and national experience. No room is afforded by this view for any cultural and institutional analyses which can scarcely tolerate conceptions that would have the Soviet Union emerging from some historical hiatus, without roots in history, peoples and so forth. But such is the case in our present thinking, and ultimately it will demand its price.

A fact worth considering is that countries and nations who have had long experiences with Russian diplomacy and expansionism actually scotch this superficial ideologic view of the struggle. If they were in more formidable material circumstances, they would certainly be more outspoken on this. They fully recognize the fact that this misleading ideologic viewpoint on simply fighting communism has to the largest extent worked to preclude our understanding of the real adversary. Above all, it has precluded a realistic assessment of the enemy's power and its military and economic potentials. If this is only partly correct, then it follows that we have been wastefully dispersing our forces and assets by virtue of not recognizing the ramifications of our misunderstanding or, more properly, our lack of understanding the real problem. This lack is basically at the source of our being continually on the defensive. It explains the ever present contradictions between our espousals of principles and our passive deeds, viz, between our expressed liberation policy and our containing behavior. It fundamentally accounts for our inabilities to cope with the Russian drive for extreme nationalism in the Middle East[1] to realize the potentials for freedom resident among the captive non-Russian nations within the Soviet Union itself, and to successfully combat Russian propaganda in all spheres, be it scientific, economic, military,[2] political, or cultural.

THE RUSSIAN PROBLEM DEFINED

What, then, is the nature of the Russian problem? As is necessary for the solution of all problems, the first step is to define the problem. And this foremost of problems today may be satisfactorily defined as follows: rooted in four centuries of development, the Russian problem is an institutional nexus between external imperialist, colonial predation, and internal totalitarian coercion. It is important to view the history of any phenomenon in terms of its totality, its central directions, and chief features. History does divulge its own patterns. The overall and prime feature of Russian history is external predation. If one cannot see this, then he has yet much to learn about this history down to present times. Moreover, this feature of predation supports and is supported by the equally important feature of internal totalitarian coercion.

The striking aspect of this institutional nexus is the interplay between these two phenomena. The success of the one is dependent on that of the other. Thus the problem encompasses within its own nature a vicious circle that for its existence and the glory of the Russian mission in the world must continually widen. Regardless of the ideologic guise under which it has operated—today, communism; yesterday, orthodoxy and pan-slavism—this concentric growth has brought about the subjugation of good parts of Europe and Asia. Modern technology has facilitated this growth so that now it threatens the security of our own Nation.

Another essential aspect of the nexus is the demographic one. The statistics quoted here will doubtlessly be contradicted by the results of the recent population census taken in the Soviet Union; but Western students have learned some time ago to discount Moscow's official figures in whatever vital area. There are about 90 million Russians. Against this amount stand some 110 million non-Russians in the U.S.S.R. itself and another 100 million in the external satellite area in Central Europe. Excluding the captive non-Russian populations in the Far East and in south Asia, it is evident that similar to the Turks in the Ottoman Empire, the Russians are clearly in the minority. As in the other case, the Russian empire, today under the legalistic veil of the U.S.S.R. possesses in captivity a majority of non-Russians to do its work.

Now, once one recognizes this Russian problem, he is faced by another. The question that arises in one's mind is not a new one. In fact, going back to the beginning of the 16th century, the ambassador of Emperor

[1] See article on "Guiding Impressions of the Middle East," the Ukranian Quarterly, September 1958, pp. 226–235.

[2] See "Basic Misconceptions in U.S. Military Thought on the U.S.S.R.," the Ukrainian Quarterly, December 1958, pp. 299–310.

Maximilian to Muscovy defined it well when he said, "I do not know whether it is the character of the Russian nation which has formed such autocrats or whether the autocrats themselves have given this character to the nation." Baron von Herberstein was obviously in doubt about the source of the problem, but he at least recognized the major problem itself. In terms of tyranny, state controls, censorship, pretentious military prowess, and other familiar institutional facets, the Muscovy he knew was substantially no different from the Russian-based Soviet Union we know in our day. Fluctuations in the exercise of these institutional facets, by way of relaxations, glowing promises of improvement, and changes in characters, have marked the history of the Muscovite and later Russian state from his day down to our own. Nevertheless, the nexus was maintained and the empire grew. This notable fact is particularly important for those in our day who are easily deluded by transient and incidental changes in the Soviet Union.

This institutional mirror of the political body of Russia has been shown time and time again by objective foreign observers. In the 19th century, people like de Tocqueville and de Custine vividly painted the picture of Russian society as it was and, one could say, as it is in substantial form today. It is most heartening to note that some of our leaders are beginning to realize the importance of the perspective stressed in our definition of the Russian problem. Recently, with reference to Marquis de Custine's classic, "Journey for Our Time," Senator FULBRIGHT, chairman of the Senate Foreign Relations Committee, told a witness: "I know you would be interested in it, because in its description of how the Russian people think it sounds in many cases as if it was written yesterday."[2]

In point of fact, this psychocultural analysis by de Custine is indispensable to the competent knowledge of anyone dealing with Russia. It should be donated as a charitable present to our Cyrus Eatons, Stevensons, and Ellenders who, if they would pause to think, could benefit from this classic. Few proper names need be changed in this work for it to describe the basic institutions of present-day Russia. As de Custine puts it in cultural terms, "Russian civilization is still so close to its source that it resembles barbarism * * * Russia is no more than a conquering society. Its strength is not in ideas, it is in war; that is to say, in ruse and in ferocity."[4] The existence of space satellites, rockets, missiles and other technologic novelties of our day do not diminish the pertinence of this truth to contemporary Russia in the least. Indeed, they only magnify it as they aggravate the problem itself.

The phrase about war "in ruse and in ferocity" is most significant. The techniques of deception and chicanery have long been employed in Russia's foreign affairs. What we call the cold war today is in essence an old Russian institution, well antedating the indirect aggression Mr. Dulles perceives in the Middle East or, for that matter, operational Leninism itself. What we are witnessing today, from Mikoyan's pleas for peace without justice to tune-saving babble in the United Nations and elsewhere, has numerous traditional precedents in the empire-building history of Russia. These tactics and techniques were formed and fashioned for well-nigh 400 years.

Dealing with working and fact-based concepts, it is not the aim of this article to recite all the outstanding evidence supporting our definition of the Russian problem. The sole general fact that in the span of a few centuries an unprecedented empire was created by the Russians would seem to suffice. However, it is necessary to demonstrate the striking relevance of de Custine's observations to the present by citing several prominent examples of how this was accomplished. Contrary to false popular impressions, direct Russian military aggression has always been secondary and subsidiary. It has been in the field of what is known today as cold war activity that Russia has always relied for its primary weapons to achieve predatory conquest. And such activity embraces subversion, infiltration, divide and conquer maneuvers, friendship societies, ideologic diversion, pretenses at peace promotion, diplomatic blackmail and several other deceptive devices.

In this dimension the distance between Mikoyan in the present, or a Khrushchev, to an Ivan the Terrible in the past is short, indeed. Few appreciate the fact that the first Czar of Muscovy laid the formal groundwork of the many exhibitions we are witnessing today. His crucial conquest of the Khanate of Kazan in 1552, which actually started Muscovy on a unique empire-building enterprise, was preceded by 33 years of cold war operation. He was the first to put into successful practice what Lenin, almost 400 years later, codified as neither peace nor war or what Secretary Dulles today calls indirect aggression. Ivan sponsored a competing native candidate for the throne of Kazan as early as 1519 and, through him, succeeded in weakening the Khanate to such an extent that by 1552 Muscovite troops had only to move in. The policy of Khrushchev toward Nasser and his pan-Arab plans is not much different.

Building on this and other similarly successful feats under Ivan, as, for instance, the subsequent subversion of Astrakhan, Moscovy provides many such essential cases for the following centuries. The conquest of Ukraine was begun in the 17th century with the breach of the Pereyaslav Treaty of 1654, a military pact which Muscovy distored into an integral political union of Muscovy and Ukraine. Significantly, this untruth was sounded again in the U.S.S.R. in 1954 during the so-called Pereyaslav celebrations. The full conquest of Ukraine was not achieved until Catherine's time, but the period is replete with Muscovite political preparations, subversion, and monistic orthodox ideology. Moreover, this period discloses a powerful truth which has been repeated as a cyclical pattern in our times. And that is, so long as Ukraine was free, Poland, the Caucasus, and other neighboring areas were free of Muscovite or Russian domination: once it was submerged, the others followed. This happened in the 18th century; it was repeated in this century.

Thus it was not long that the partition of Poland ensued under Catherine the Great. Here, too, the Russian Ambassadors Repnin and Stackelberg played the role which we in our time saw Vishinsky execute in Latvia—"accept this, or else." Before the second partition in 1793, renegade Poles were organized to call for the "liberation" of the people from Polish boyars and the Church. With Poland and Ukraine submerged, the Caucasus soon followed. This event was prepared decades in advance.[5] The process of weakening the area was seen even durthe Russo-Turkish War of 1768–1774. Although in a pact with Georgia, Catherine had her troops withdrawn on the eve of battle, leaving Georgia to the devastating blows of the Turks. It is evident that the Russian infamy in the Warsaw uprising of the last war is not without able precedent. The stage and characters are different, but the form and act continue to repeat themselves. If space permitted, the operations of Russian diplomacy in Persia and elsewhere during the 19th century would tell the same story.

THE INTERNAL COMPONENT OF THE PROBLEM

Our problem, then, is not the challenge of communism; it is the despotic challenge of traditional Russian institutions. In the period covered above, other ideologies prevailed as both instruments and smoke screens for totalitarian Russian expansion. Fatuous Communist doctrine does not differ in this respect from the Petrine doctrine and panslavism of the past. What is fundamentally important for the West to understand is that the imperialist and colonial objectives of Russia and its tactics and techniques have been substantially the same these past 400 years. We are deluding ourselves if we continue to believe that any enhanced output of technologic gadgets will alter the structure of the Russian institutional nexus.

Those who would seek to impute any anti-Russian bias to this realistic interpretation either do not understand the reasoning involved or are quick to shield their own biases. It is often intellectually sickening to hear that we cannot face up to the bold and stubborn facts because it would be construed as anti-Russian, i.e., against the Russian people. The forceful truth is that along with other peoples and nations, the Russian people have long been oppressed by the internal component of the institutional nexus in this Russian problem. Here, too, it is not difficult to trace the facets of this component from the time of Ivan's Oprichniks to Khrushchev's security forces, from Peter's crash economic programs to the present 7-year plan, from the Czarist mir to the present collectives. It will be readily admitted that many liberal forces were at work in the old empire and, no doubt, that such forces are latent in the present empire. But one must also be intellectually honest to admit that these forces really had little effect upon official Russian policies.

A clear analytical grasp of the Russian problem as defined here enables one to see the dual direction that a successful policy must logically take in order to solve this historic problem for all time. Present U.S. policy rests on a basic misunderstanding of the problem. In turn, this misunderstanding stymies the full use of our own traditional forces which, if unleashed, would overwhelm the enemy in the current struggle. The antidote to the external part of the Russian institutional nexus, namely predatory conquest, is our manifold support of the patriotic nationalisms of every captive non-Russian nation in the present Russian Communist empire. For obvious reasons, the emphasis of this direction should be placed on those within the Soviet Union itself. The antidote to the internal part of the nexus is our appeal to the Russian people in terms of individual liberty, improved living conditions, and democratic freedoms. By nature of the nexus that exists, the antidotes cannot but reinforce each other. We still have time to pursue these logical directions. What is necessary first is an intelligent awareness of the Russian problem.

Somewhere Beyond the Ocean Blue

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 6, 1959

Mr. CHAMBERLAIN. Mr. Speaker, as Memorial Day approaches and our thoughts naturally turn to the sacrifices

made through the years by those who believed our Nation was worth fighting for, Mr. Fred V. Hayford, of Lansing, Mich., has sent to me the following poem which he has composed as a tribute to those who have defended our country:

SOMEWHERE BEYOND THE OCEAN BLUE

(By Fred V. Hayford)

A grateful nation should always keep in mind,
Achievements, which history recorded, as being fine;
First, here at home, our forefathers made their stand,
To provide posterity a home, in a vast free land;
Again and again, when enemies tried to invade our shores,
A new generation stepped forward, to do the chores;
On land, sea, or in the air, wherever necessary to go,
Americans were on hand, as our former enemies now know.

Somewhere beyond the ocean blue.
Other grateful nations still think of you;
Your deeds of valor also saved their fair lands,
As you boys pushed forward, over their white sands;
For our cause was so fair and just,
And for freedom's sake, to win, we must:
And now, for those who lived, and those who died,
"We bow our heads in thanks" with sincere pride.

Down With Deficit Spending

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 27, 1959

Mr. SAYLOR. Mr. Speaker, earlier this month, the Tribune-Democrat, published in Johnstown, Pa., joined the Chicago Tribune and other newspapers in a unique campaign to urge Congress to eliminate unnecessary spending in the Federal Government. Since then, I have received scores of messages from readers who are deeply concerned with Federal policies and practices that are the basic reason for inflation and which will bring eventual bankruptcy to the Nation unless checked and reversed.

The newspapers and the citizens responding to this patriotic movement are to be congratulated. Since coming to Congress, I have been an incessant foe of extravagance with U.S. Treasury funds, but somehow the number of economy minded Representatives and Senators has not prevailed except for a very short period. Under the demands of an irate citizenry, I am hopeful that even Members with the most burning penchant for spending tax dollars will begin to tighten the reins on runaway inflation. The place to start is right here in Congress when the appropriation bills are under consideration; only if the Government lives within the limits of its income will our dollar retain its value.

Deficit spending, except in extreme emergencies, is immoral. It leaves to future generations the debts incurred by wastrels of preceeding eras. For a while there was no immediate visible evidence to contradict the preachments of political imposters who insisted that "it makes no difference if we have a big national debt—we owe it all to ourselves." This spurious but appealing reasoning was repeated over and over as the presses printed more and more dollars for use in any number of paternalistic ventures and for distribution to friends and enemies all over the world. U.S. Government money began to flow like water, and everyone was offered a drink.

Now, at long last, the past is catching up. The water is fast losing strength. The bureaucrats who opened the spigots have plenty of victuals for themselves, but the people who pay their way are finding that they have been sold down the river that erodes the value of their incomes. Pensioners have been cheated; men and women who saved for retirement have had their nest evaporate in an atmosphere of Federal extravagance; the average worker who has been fortunate enough to enjoy wage increases finds that he is in truth standing still economically; and those whose incomes remain the same are slipping to lower living standards.

National debt makes no difference? If there is anyone still supporting that theory, perhaps he would like to explain away the $7,600 million interest that was paid on the national debt in fiscal 1958. That money came from taxes. In the hands of the Nation's taxpayers, it could have bought upwards of half a million $15,000 homes; or 3 million automobiles selling for $2,500 each; or paid $4,570 toward college tuition and expenses of every boy and girl who will be graduated from high school this year.

Mr. Speaker, if the American public had an extra $7½ billion to spend as it chooses, there would be no need for depressed area legislation or other projects that are contemplated for reviving the economy. More new houses and new cars would put new demands on coal, steel, glass, tools, plastics, ceramics, pottery, railroads, and the many other industries that must keep running at high levels of operation if a sound economic structure is to be maintained.

We are not pointing in the direction of economic stability if deficit spending is continued. The job of the Federal Government is to return to a sound monetary basis and to start cutting down on the national debt. Inflation is deadly poisonous. The only antidote is an integrious money policy to be administered by the Federal Government.

Housing Act of 1959

SPEECH

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (S. 57) to extend and amend laws relating to the provision and improvement of housing and the renewal of urban communities, and for other purposes.

Mr. GALLAGHER. Mr. Chairman, as this Nation has prospered and expanded in the post World War II years, we have seen the greatest building boom in history. Our cities and our countryside are crowded with great and modern industrial plants. We have pushed our skyscrapers to heights never dreamed of and made of them aluminum and steel shafts of dramatic architectural design. Whole new suburban communities have come into being.

We have seen the construction of many attractive and functional new school buildings in which we educate the children who live in the lovely ramblers and ranch houses that make up our new suburbia and the fine new residential sections of our cities.

Of all this we may be proud, especially proud that so much of it was made possible with the aid of the Federal Government. The Congress at the very outset of our tremendous postwar expansion and development saw the need for programs that would satisfy the demands of our citizens for adequate housing.

There is danger that we should fail now to see these worthwhile programs through. For the task is nowhere near finished. The tragedy is that despite the Nation's great prosperity and the healthy postwar economic boom and expansion there are still hundreds of thousands of our citizenes living in substandard housing. Nearly everyone of our cities is blighted by sprawling slum areas. I am conscious, as I am sure we all are, of the great cost of programs to alleviate these conditions. But so long as hundreds of thousands of Americans live in substandard areas and are denied the privilege of adequate housing; so long as college students are forced to live in basements and firetrap garrets, we have a responsibility to do everything in our power to bring about the elimination of such conditions. Until we do this, not through an inadequate and long drawn out program, but in a speedy and efficient manner, the housing task the Government tackled some years ago is unfinished business.

In addition to meeting the required demand for housing, it will serve to promote construction and also serve to stimulate the economy in economically distressed areas.

I urge that we face up to this challenge by the final adoption of S. 57, the housing bill.

Free World Recognized Dulles

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. FULTON. Mr. Speaker, America and the peoples of the world have been

aided in their progress for peace by Secretary of State John Foster Dulles.

As a member of the House Foreign Affairs Committee, I knew his competence and complete dedication.

As a friend who has known him a long time, and who has worked with him I have admired his high principles and friendly approach.

His willingness to be helpful and his understanding replies have made him many loyal friends. As a friend, I have always enjoyed as well his good humor and gleeful chuckle.

Foster Dulles has been a product of America in her best tradition, and we are proud of him. You future generations who follow us, remember Foster Dulles as an ever active, tireless, and competent public servant of wide capacities from a lifetime of preparation, working in a troubled sea of change after World War II.

The advice and counsel of Foster Dulles are respected among the peoples of the world, and he has been a warmhearted friend of high principle.

Under leave to extend my remarks, I include the following article from the Pittsburgh Post-Gazette on Mr. Dulles:

FREE WORLD RECOGNIZED DULLES

(By David Lawrence)

GENEVA, May 26.—The air waves of Europe have been filled with tributes to John Foster Dulles. Words of praise were broadcast by the radio stations everywhere on Sunday as the sad news of the death of the former Secretary of State became known. The contrast between what is being said now and what was said a year or so ago is striking. Somehow the free world came to appreciate Mr. Dulles only when it was apparent that, being stricken with a fatal cancer, he would be lost to the councils of the Western governments.

Listening to the eloquent eulogy by Selwyn Lloyd, the British Foreign Minister, as it came over the British Broadcasting Co. on Sunday afternoon, this correspondent felt that no more fitting appraisal could have been uttered in government circles anywhere. For, as Mr. Lloyd put it, there was no inflexibility about Mr. Dulles except on matters of principle, and he had the courage to stick to moral principle even in the face of the bitterest criticism.

The position of John Foster Dulles in history is in a sense being fixed earlier than might otherwise have been the case. For he was suddenly removed from the scenes of his greatest labors at a time of crisis. His statesmanship began to be appraised in the highest terms when it was realized that he would no longer be available to guide the free world.

Mistakes there were in Mr. Dulles' handling of some of the multifarious problems that came to him for solution, but he was the first to admit them and to correct them. He was not rigid in a negotiation. Indeed, he was resourceful and never felt that the door should be slammed when there was a possibility of agreement.

He had a faith that the West could win the long battle with the Communists only by sticking to principle and refusing to compromise on fundamentals. His critics thought he was unrealistic and that he should accept the Soviet position as one not likely ever to change. Dulles realized that Americans often were too impatient and sometimes were ready to appease on the false theory that this would be of benefit in the end and bring peace. He felt just the opposite—that appeasement or surrender at the time would mean dangerous complications later on and that maybe we would not have been plunged into two world wars if firmness, instead of vacillating diplomacy, had been manifested early enough by the Western Allies.

Mr. Dulles frequently was represented as a believer in a one-man Department because he handled so many problems personally. But he did develop a fine staff, and his legacy is the great team in the Department of State today.

The picture of Mr. Dulles that unfriendly critics painted was that of a man who unduly influenced President Eisenhower. This was not true. Mr. Dulles always functioned as an adviser—as a lawyer to his client—pointing out the different courses of action and leaving it to the President to make the decision. It was this quality of deference rather than any kind of domination which endeared Mr. Dulles to the President. In fact, Mr. Eisenhower's respect and admiration for Mr. Dulles constantly grew, and a deep affection developed between the two men. When Mr. Eisenhower learned that there was no hope of a recovery and that Mr. Dulles had himself recognized the facts and submitted his resignation, the grief of the President was noticeable. The hesitation in announcing the immediate appointment of a successor was due in large part to the feeling that no news should for a day or two at least be permitted to overshadow the story of the departing statesman from the Government he had served so long and so faithfully.

Mr. Eisenhower had tears in his eyes when, at the press conference in Augusta, he announced Dulles' resignation. To Press Secretary Hagerty, who rode away from the scene with him, the President said: "It's like losing a brother."

Somehow, since a termination of service was inevitable some future day, it is a splendid thing that John Foster Dulles, lying on his hospital bed these last few weeks, lived to see his principles vindicated in the worldwide acclaim given him.

John Foster Dulles is gone. A great statesman—perhaps one of the greatest in modern times—has departed. While the free world today appreciates what he did, it is important now that his principles and the doctrines he preached shall not be forsaken by his own Government or by the governments of the free world for the preservation of whose liberties and freedoms he gave unstintingly and unselfishly all his ability.

Obscene Literature

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 27, 1959

Mr. SAYLOR. Mr. Speaker, a great many parents all over the country are grateful that the TV Academy chose Miss Loretta Young for one of its coveted awards this year. Her program of April 26, 1959, was an outstanding moral, social, and civic contribution. It portrayed vividly an alarming criminal consequence of the sale of obscene literature on newsstands; it also demonstrated the need for community wide participation in the drive to clean up the printed material available to American youth.

The general public as well as the television industry is indebted to Miss Young for her superb performance in behalf of decency. Realizing the urgent need for exposing irresponsible news dealers, producers of that show have expertly dramatized the problem a second time. Another effective use would be to make prints of the film for use at meetings of parent-teachers organizations, veterans' groups, and various civic clubs.

The story emphasized that society is to blame if news vendors flaunt the laws of decency by putting salacious literature up for sale. Every adult who has any love whatsoever for his family, his neighbor's children, his community, and his country should ponder Miss Young's observation that "we are going to pay an awful price for it" unless the situation is remedied.

Anyone who is resigned to believing that the practice cannot be stopped should become acquainted with what is taking place in my district. Individuals and organizations alike have begun to demand a cleanup of newsstands, with the result that guilty newsdealers have been notified that they must cease peddling filth or be prosecuted. Distributors serving the area have agreed to stop serving obscene material, not only to stands, but to outlets throughout the district.

The same vigilance is required to halt activities of direct mail houses that violate the sanctity of homes and solicit children. Parents who find that lewd material is coming through the mail have a duty to society as well as to their own boys and girls to report the offenses to their local postmasters, and other postal authorities.

Last year, Congress strengthened the law to simplify prosecution of traffickers of foul and filthy printed material. How communities may implement the law is being demonstrated in several areas of my district, and I take this opportunity to congratulate all participants for their forthright courage and duty.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Address by Hon. Edmund G. Muskie, of Maine, Before Tennessee Municipal League

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. KEFAUVER. Mr. President, within the past few days it was my privilege to accompany my able colleague [EDMUND S. MUSKIE], the junior Senator from Maine, to Tennessee. Mr. MUSKIE addressed the Tennessee Municipal League at Gatlinburg. His remarks before that body were most inspiring and made special mention of the Tennessee Valley Authority. His recognition and understanding of this fine demonstration of power and resources development in my State is greatly appreciated by all of us in Tennessee. I ask unanimous consent that Senator MUSKIE's speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

While I deeply appreciate the invitation of the Tennessee Municipal League, extended through Senators ESTES KEFAUVER and ALBERT GORE, I must confess feeling a little as though I were carrying coals to Newcastle. It is not that the subject of my remarks is an unworthy one—far from it—but it may seem presumptuous for a new Senator from northern New England to come into this beautiful State to discuss the role of Government in achieving full utilization of our resources.

I say this because seldom in our history has there been such a spectacular example of creative and wise use of resources, as is exemplified in the Tennessee Valley.

I was interested to read recently that the TVA continues to be one of the first things that many youthful foreign visitors ask to see when they have an opportunity to travel in the United States. The TVA is still one of the best examples available of an imaginative approach to resource development within the framework of a Federal system of government. It goes without saying that the development of our natural resources represents one of our most fruitful areas of Federal, State, and local cooperation. It is striking that in the TVA instance, the decision was made to step outside the usual framework of Government in order to achieve maximum results. This willingness to try the flexible approach undoubtedly was of crucial importance in producing the dramatic results which are today obvious to anyone who comes into this area with open eyes and an open mind. There are several important points which are underscored by the success of the TVA experiment. I should like to explore each of these points more fully.

Before I do that, I would like first to outline my general philosophical position on resource development. First, it is well to remember that the conservation movement is largerly limited to the 20th century in America. Theodore Roosevelt was the first great public figure to dramatize conservation as a live issue and to make it part of the official policy of the U.S. Government to achieve conservation of our resources. Prior to Theodore Roosevelt, we had operated on the assumption that we had resources to burn and I suppose, in one sense, we did have. In any event, the abundant resources of this great continent were gobbled up and exploited as if there were no limits. Today, this is no longer true. We are operating in a period of history when we can no longer afford to waste a single resource, material, or human.

Indeed, if we are to achieve the good life for coming generations of Americans, we are probably going to need another Theodore Roosevelt to again rekindle the issue. With a population increasing at the rate of about 3 million a year, with every decade adding another 30 million Americans, we can easily look forward to the time when there will be more than 200 million of us and this probably within the lifetime of most of us here today.

It is clear that resource development rates very high on the agenda of American democracy. We dare not do less than the maximum in view of the cold war struggle in which our Nation is engaged.

What lessons can we draw from the TVA experiment which might apply on a broader national plane? First, there is the necessity for bold creative thinking. The Tennessee Valley Authority idea was several decades in the making, as various individuals dreamed of the possibility of harnessing the water resources of the Tennessee River.

Secondly, there is the need for courageous political leadership in behalf of the idea. Who knows what the fate of the TVA idea would have been if the late Senator Norris and a few other courageous pioneers had not been prepared to do battle over a long period of time.

Thirdly, there is the need for wise and effective administration to implement legislative plans once they have been drawn. Here the lesson of the TVA is most instructive.

The many excellent cooperative efforts carried on under the authority of the TVA have shown us how successfully modern federalism can function on a day-to-day basis. The TVA partnership efforts with State departments of health, conservation and parks, with municipal power boards, with rural electric cooperatives, with State and local planning commissions, with agricultural and engineering experiment stations, with State extension services, and with many other agencies, are all examples of how successful optimum use of a comprehensive water resource development project.

The value of such a comprehensive development project is that it provides for an overall development of an area's natural resources. A multipurpose project, such as the TVA, provides optimum benefits in a host of areas wherein conservation and development are essential for the advancement and protection of the general welfare. You have shown, here in Tennessee, that flood control, irrigation, soil and forest conservation, fish and wildlife conservation, power production, navigation, and recreational facilities, can be combined fruitfully in a common program of action. In the long run, such a program benefits not only the State and the region directly involved, but also offers direct benefits to the Nation itself.

This is true, of course, because the Nation's general welfare and economic growth are hampered or retarded when separate States, or even when whole regions, fall below a national minimum standard of performance. I think it is possible to see that these stimulants to the economic growth of individual States can sometimes be acquired best through cooperative Federal action.

Most important of all, the TVA experiment reveals so clearly that creative thinking in the field of conservation given the proper legislative support, and administered with boldness and dedication, can restore the faith of the people themselves in their capacity for self-government, and equally important for economic progress.

It would certainly be a philosophy of despair if we were to conclude that we lack the capacity within our democratic system to achieve the maximum utilization of our resources.

As a matter of fact, it seems to me that we have now reached the point in our Nation's development when an equally imaginative approach is needed with respect to the development of our human resources. Perhaps the conservation movement in the last half of the 20th century ought to be devoted to the wisest possible use of our people's talents and abilities. I do not profess to know the details of all of the major instances in which we are clearly wasting human resources but here are a few examples which have come to my attention recently:

1. In the field of education, we are told that for every young American successfully engaged in the pursuit of a higher education at the college level, there is one more having essentially the same ability who is not. At the public school level, the problem is well known: A recent survey by the Office of Education reveals a continual shortage of 140,000 classrooms. The National Education Association, Research Division, estimated at the beginning of the current 1958–59 school year that 135,000 more qualified teachers were needed than were available this year.

2. When the National Manpower Council published a volume entitled "A Policy for Skilled Manpower" in 1954, they found it impossible to tell exactly how many skilled workers there were in this country. In other words, as recently as the last Federal census in 1950, the best we could do was to estimate that there were between 8 and 9 million skilled workers. The council reported no reliable basis for estimating the number of skilled workers in operative, clerical, sales, service, farm, and certain other occupations. This reminds me of my elementary course in physics in high school when I first encountered the question which I am sure is still discussed in the same classes when they study sound. When a tree crashes in the wilderness outside the range of any ear, does its fall create sound? Can there be sound when there is no one to hear it? In connection with the subject we are discussing, is anything whose existence is unknown to anyone a resource? Is it a wise national policy not to know who our skilled workers are and where they are located?

3. A subcommittee of the Senate, of which I am a member, recently had prepared a

study which reveals some rather glaring inadequacies relating to foreign language training. The study shows that only a token percentage of the members of the military, economic, and technical assistance programs abroad are capable of speaking the language of the country they serve. By way of contrast, reports indicate that the majority of high level Russian personnel assigned to embassies and economic missions in most foreign countries have a fluent proficiency in the language of the country to which they are sent.

The Russians start the teaching of foreign languages in grade school. Their policy is for each of their 15 million high school students to study a foreign language. One authoritative source estimates that 45 percent of the Russian high school generation studies English, 35 percent German, and 25 percent French. At university level, the study of foreign languages in the Soviet Union is mandatory. By way of contrast, less than 15 percent of our 8 million high school students are currently studying any foreign language. Less than 10 public high schools out of a total of 25,000 in the United States offer a Russian language course. Probably less than one one-thousandth of 1 percent of our high school students are studying Russian. About 1 American university in 10 offers a Russian course. It has been estimated that 10 million Russians have the ability to read the English language, whereas most reports indicate that only 10,000 Americans, including students, have the ability to read Russian. Of course, this effects the scientific community as well as any other. Reports indicate that half of Russia's 1 million scientists can read English, whereas not more than 1,000 of the 1 million American scientists have the ability to read Russian. That would be about one-tenth of 1 percent.

On the basis of this evidence, it seems to me that the Soviet Union is making more effective use of its human resources in this important area of activity than we are.

4. Another Senate subcommittee, of which I happen to be a member, recently held hearings on a proposal to create a Department of Science and Technology with Cabinet status in the Federal Government. These hearings revealed the absence of any overall policy with respect to science at the highest level of the Federal Government. Here again we have a tragic example of an ineffective utilization of human resources. I am sure that if one had the personal knowledge and the research facilities, this kind of analysis could be pushed into many other areas of our national life. If, for example, the statistics are correct which show that 16 million Americans are suffering from some form of mental illness, one wonders what the cost is in terms of their inability to perform adequately their individual roles in our national life. While no one knows exactly what American industry loses each year because of mental illness, a survey completed in 1954 by the Menninger Foundation suggested that the loss would run into billions of dollars annually.

I think that the time has arrived for a new conservation movement which would center its attention on the purely human aspects of resource development. It is clear that in this area of public policy, we have often lacked imaginative thinking and courageous political leadership, to say nothing of administrative competence in dealing with the problem. I am encouraged to believe that I am not exaggerating the scope of the problem when I read that the President's Science Advisory Committee has just released an 18,000-word report which concludes that a doubling of our current annual investment in education is probably a minimal rather than an extravagant goal.

What are the lessons we should learn from the TVA as they apply to the broader problems of national survival and natural growth?

First, it seems to me that we want to do more than merely survive. That is to say, that when we speak of national survival, we have in mind something more than our continued existence as an independent, geographically identifiable state. If I am not mistaken, we have a deeper desire for America to survive and to prosper as a vital, meaningful force which, by its leadership and by its example, can lift the world upward gradually to higher levels of social and economic progress for men and women everywhere. This suggests, I hope, that we are concerned with more than Maginot Line security. We are concerned with more than a retaliatory capability which can destroy our potential enemy. We are concerned with more—and I should say something far different—than political domination of other areas of the world. We are concerned with demonstrating here, at home, and to the peoples overseas that our way of life does give us strength, that it does enable us to prevail over those who would destroy us, and that it is the last best hope of ordinary people everywhere who yearn for opportunity, dignity, and freedom.

Second, I say that we are concerned with this—and I mean concern with an emotion that we have never had to feel before. Our policies and programs since our beginning have been based on the assumption that we had resources to burn, that no other nation could match them, that our way of life and our institutions had an irresistible attraction for peoples not privileged to enjoy them—the assumption of manifest superiority.

This is an assumption that is no longer valid. What we are, what we have, and what we offer, are being weighted on the balance against the supposed attractions of an alien system. We are being judged by people who are not advocates of higher democracy or communism, but who are concerned as to their own status in life and its improvement. To these peoples, we are no longer manifestly superior.

To capture their minds and hearts—and there are more than a billion of them—it is necessary that we utilize to the maximum every resource at our disposal—material, human, and ideological. We must live our national life with a fire, and enthusiasm, and a confidence in ourselves that we have always found it possible to summon in times of national crisis.

What does maximum utilization require?

It requires, first of all, that we become a progressively stronger economic force in the world, gaining strength not only for ourselves, but for peoples everywhere who seek to develop an economic climate favorable to the recognition of the dignity and worth of the individual.

It requires secondly, the establishment of a military posture which is dynamic, not static, which utilizes to the full the tools of scientific research, and which unhesitatingly and firmly seizes every advantage and makes maximum use of every new development which promises to strengthen our sinews. Such a posture is the shield behind which we can mobilize the economic and ideological strength which will give us the ultimate victory.

Thirdly, that we develop every resource here at home. Measured by the tasks to be performed, there is plenty of work for all our people and they must all be kept busy to the limit of their skills and their capacities. We do not have enough scientists. We do not have enough teachers, we do not have enough doctors, nurses, psychiatrists, technicians of all kinds. Everywhere we turn we find shortages of skills. Who says there isn't enough work to keep all Americans employed? There is work begging to be done. How do we fit the square pegs in the round holes?

One great bridge between the man and the job is the educational process. This isn't to say that with the proper schools we can train anyone to do anything. It isn't to say that the answer to current unemployment is to send everyone to school. It is to say that we have great unfilled needs in the field of human skills, that we are doing too little about it, and that we cannot retain the image of America as the strength and hope of the world unless we utilize every potential talent which we have wherever it may be found. It is time to deal with a national problem by providing a national answer to it.

We won't do it today, or tomorrow, by sitting on our hands. We will not do it today, or tomorrow, by smugly glorying in past victories. We will not do it today, or tomorrow, without thinking, without taking the people into our confidence—without asserting the creative and productive capacity which lies in the hearts and minds of a free people.

Someone once said, "the road that stretches before the feet of a man is a challenge to his heart long before it tests the strength of his legs." What he was saying is that the heart is often capable of greater decisions than the mind: The heart of America is its secret weapon.

World Refugee Year

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "World Refugee Year," published in the Christian Science Monitor of May 23, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WORLD REFUGEE YEAR

For some 15 million persons crowded into shanties or camp barracks around the world, daily life is a drab, uncertain, jobless, and sometimes mealless grind. They are Palestinian Arabs, Chinese in Hong Kong, East Europeans, and, most recently, Tibetans. They have in common their loss of homes, jobs, status, and homeland. Mostly their exile has been dictated by war.

Now, 31 members of the United Nations have agreed to launch a coordinated yearlong drive to rescue as many of these refugees as possible from idleness, hopelessness, and hunger.

World Refugee Year starts in June. Its approach is both humane and practical. Each of the participating nations is organizing its existing private and official refugee relief groups for a frontal attack on this still unsolved problem born of international unrest.

In the United States, a conference of some 160 leaders of such organizations already has been held under the auspices of the President. In Britain, the Queen is to head the refugee aid program. The Communist bloc nations, from which most of the current refugees have fled, are not participating.

With a plethora of charities knocking at his door, the average man is likely to fall back on the maxim that "charity begins at home." We hope that for World Refugee

Year, at least, citizens in the "have" nations will consider a version that reads: "Charity begins with the homeless."

Anniversary of Italian Republic

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. BEALL. Mr. President, I ask unanimous consent to have printed in the RECORD a statement which I have prepared on the friendship between the United States and Italy. This statement is prepared for the anniversary of the founding of Italy's Republic in 1946.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

On next Tuesday, June 2, 1959, Italy will celebrate its 13th anniversary as a republic. This day will recall to mind how the people of postwar Italy, who had been subjected to untold suffering and the destruction of modern warfare, called for a plebiscite and voted for a republican form of government.

The road of democracy in Italy had been difficult: Many obstacles had to be overcome. Many hardships have been suffered by Italians who have fought for liberty against oppression.

Italians remember this day 13 years ago, and outstanding is their gratitude to the statesmen who successfully established a new democratic government without bloodshed.

We Americans viewed this vote of confidence in democracy by the Italian people with understanding and admiration. Further, our foreign policy was then geared to mutual assistance with Italy, which action gave support to the new Republic's rise to maturity.

Under the leadership of the statesman Alcide de Gasperi, the infant Republic strengthened its position and became an ally of the United States in the fight against communism.

The friendship between the United States and Italy has been evidenced in many ways during the past 13 years. Italy has been an indispensable partner in the European recovery program and in the North Atlantic alliance.

Italy's identification with the aims of Western democracies has been reaffirmed by its leaders throughout this period. As recent as March 1959, its Parliament voted, by a substantial majority, to follow a policy of absolute faithfulness to the Atlantic alliance.

Soon, ballistic missiles of the United States will be placed at strategic bases on Italian territory to protect the nations of the free world from Communist aggression.

In 1952, only a short time after the birth of the new Republic, the headquarters of General Gruenther, then commander of NATO, was surprised at the achievement of Italy in supplying its full quota of 12 divisions for the North Atlantic Treaty Organization. Italy was among the first to honor its commitments.

The stalwart support of NATO by Italy was noted recently by the late John Foster Dulles. The U.S. Ambassador James David Zellerbach, in a statement printed in the Department of State bulletin of December 1958, said, among other things, the following: "Our partnership with Italy has shown itself to be firmly rooted and capable of dealing harmoniously with international issues as they arise. This is the first great fact about Italo-American relations." Ambassador Zellerbach further recalled that for a long time Italy was denied United Nations membership by the Soviet veto. However, with constant support from the United States and the free world countries, Italy finally achieved full U.N. membership. The Ambassador's appraisal of Italy's friendship was expressed in the following words: "Italy has given the United States her friendship and confidence, I think we have every reason to accord Italy an equal trust."

Today, Italy is determined to bring her full measure of strength to the solution of the free world's problems. That she is ready to do so is a tribute to the vitality of her people and the vision of her Government.

On the occasion of the visit of former Prime Minister Fanfani with President Eisenhower in July of 1958, a White House press release said: "The President and the Italian Prime Minister reaffirmed the dedication of their countries to the North Atlantic alliance and to the United Nations, established to defend the peace and protect the rights of people to live in freedom under the government of their own choosing. They reiterated their firm convictions that the combined strength and consistent action of the free and independent countries of the North Atlantic alliance are vital to the peace and security, and will remain a cornerstone of their foreign policies."

Moreover, Prime Minister Fanfani acknowledged before this honorable body, on July 29, 1958, the appreciation of Italy for the support and assistance of the United States. He further assured us of Italy's firm desire to reciprocate. He said that Italy intends to give within the limits of her power, to the end that she will do her full part in averting from other areas of the world that danger of Communist subversion which has been averted in Italy.

The Republic of Italy has been, for the past 13 years, a battleground against the spread of communism. During the nationwide elections of 1948, 1953, and 1958, the democratic forces, with the cooperation of the Holy See through its Catholic Actions Organization, have delivered repeated defeats to the Communist parties of Italy.

I should like to add that Americans, too, campaigned in Italy, especially during the crucial 1948 elections. Financial aid was increased by our Government, and a letter-writing campaign on the part of Americans with relatives in Italy was encouraged to defeat the Communist threat to Italy. These victories are important to us here because should Italy go Communist, the entire free world would be endangered and the Communist menace would be that much closer to the United States, and, furthermore, there would be a general weakening of southern European defenses.

The respect of the United States for Italy has been demonstrated during the visits of Prime Minister Alcide de Gesperi, on September 24, 1951; President Giovanni Gronchi, on February 2, 1956; and Prime Minister Amintore Fanfani, on July 29, 1958, when each was not only received by the President, but given the privilege of addressing the Houses of Congress.

I should like to discuss briefly some of Italy's gifts to our United States. Any schoolboy will tell us, of course, that Christopher Columbus discovered America, and that the very name "America" is derived from that of an Italian mapmaker and navigator, Amerigo Vespucci. In addition, there have been such men as Cabot, who laid the foundation for English settlements in this country; Verrazzano, discoverer of New York Bay; and Malespina, who explored the West. Nor can we forget that Paoli Busti founded Buffalo; Father Cataldo, Spokane; Henry DiTonti, Detroit. There are many others.

It is with pleasure that I publicly acknowledge the friendship, confidence, and mutual aims shared by the United States and Italy on the occasion of the 13th anniversary of the Republic of Italy. I am confident that this body joins with me in extending congratulations and best wishes to the Italian people and to their leaders, Giovanni Gronchi, President; Antonio Segni, Prime Minister; Giuseppe Pella, Foreign Minister; and Manlio Bronsio, Italian Ambassador to the United States.

I would like to extend my congratulations to the Italian-American organizations of Maryland, who have sponsored a celebration to honor this anniversary of the Republic of Italy.

I would like also to extend my congratulations and best wishes to the Italian consul in Baltimore, Md., Litterio Carlo, and his staff.

It is consistent with the best interests of the United States to honor a nation which since its birth 13 years ago has been a stanch ally and friend.

Address by Boyd Leedom, Chairman, National Labor Relations Board, to Florida Bar Association

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Challenge of Industrial Progress to Florida Lawyers" delivered by my good friend and fellow South Dakotan, the distinguished Chairman of the National Labor Relations Board, Boyd Leedom, before the annual meeting of the Florida Bar Association.

Boyd Leedom, who for the past 4 years has served with distinction on the NLRB, discussed with the Florida bar the problems created by employers who adamantly refuse to deal with organized labor within the context of our Federal labor-management statutes. Such employers will go out of business before allowing their employees to organize—such an attitude is neither realistic nor equitable. This hard-headed type of resistence to the desires of employees is as reprehensive as the autocratic actions of the venal labor boss, who forces employees to join unions against their will. Whether it be autocratic employer or autocratic union boss, their actions are contrary to the fundamental greatness of this Nation—that being that this is government of laws not of men. Those who refuse to abide by the statutory code enacted by their fellow men do a disservice to all, including themselves.

I hope that Boyd Leedom's speech will be distributed to the bar associations of all the States of the Union, for it deserves wide circulation and thoughtful consideration by all responsible American citizens.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF INDUSTRIAL PROGRESS TO FLORIDA LAWYERS

(Address of Boyd Leedom, Chairman, National Labor Relations Board, before the Florida bar, Miami Beach, Fla.)

I am truly honored by this opportunity to address the State bar of the State of Florida. Without intending the least bit of flattery, I say that I regard this audience one of unusual significance, for two reasons. First, there is no more important occupational group in all of American life than lawyers. Their direct contribution to the American way is, in a real sense, unsurpassed. For our system is one of government by law, which has emphasized to a marked degree the freedom of the human spirit. Indeed, the freedom to think and to act much as one pleases is at the root of Americans' famed initiative; and it is the basic ingredient of all the unusual material advantages of our free enterprise system. And you, the legal profession, have been the architects of these freedoms.

The second significant thing about this audience is that we are in Florida. No one denies that Florida is a remarkable State. For decades she has had but one competitor for the distinction of being the ideal place in which to live—sunlit, smog-free Florida. Unique among all the States, she is of the South, yet, in many respects, much like her sisters of the North. And in this singular situation, she enjoys many of the advantages of each the North and the South and escapes some of their besetting detriments. I can cinch my conviction of Florida's preeminence by saying that when as a small boy, living on the dry and treeless prairies of Dakota, I looked at the verdant palms and the plump, bright-orange oranges of this fair State, through the magic lenses of my grandmother's stereoscope, I thought for sure Florida must be out of my world, a kind of heaven on earth that I could never attain. And so to address her lawyers in their annual assembly in this truly great State is both a privilege and a responsibility.

I want to talk to you about Florida's future, and of your responsibilities as effective citizens in one of her most vital areas; that is, the relationship between management, those who own and operate her businesses and industries, on the one hand, and her labor force on the other hand; those whose toil keeps the wheels of her industry turning. I really believe that the lawyers of Florida are key people in the determination of the rate of Florida's progress in this dynamic field of labor-management relations as she moves into what can be a most remarkable industrial expansion.

Inasmuch as Florida is a kind of half-way house on the road to outer space, I hardly need point out here that industrial and scientific developments in the decade or two just ahead strain the imagination. A couple of weeks ago I heard a good speech at the annual convention of the U.S. Chamber of Commerce held in Washington. The speaker was Mr. Don G. Mitchell, president of the General Telephone & Electronics Corp. He made this interesting comment on what the future holds:

"Here are some of the developments you can expect to see over the next few years: a single communications system in your home, combining telephone, television, and radio; your television screen will be a flat panel hanging on the wall; there will be radar steering on your automobile; machines will type spoken words directly on paper, and other machines will translate foreign languages as fast as they are spoken. There will be scores of new synthetic materials, and gas turbine-powered automobiles, and the production of electricity direct from atomic energy. These are only a few high-spots because the new products of the 1960's will extend across the entire spectrum of science."

And now before I speak of your part in all of this, I want to say something about myself, not so much to gratify the desire we all have to be the center of attention, but rather to try to qualify the witness, so to speak, and to prevent the complete rejection of what I say later, on the ground, for example, that it is the biased view of a bureaucrat who seeks to nail down more tightly his own favorite brand of Government interference in your lives.

I have been in the Federal Government only 4 years. I come from a State, South Dakota, that is about as close to American tradition as a State can be, and as free of all the "isms." Union people might echo that it is an understatement to say I am not steeped in unionism. And if it is true that unions enjoyed an accelerated growth under the New Deal, I cannot claim any of that reflected credit, or blame, depending on your viewpoint, as I was never a New Dealer. My State may be industrialized as little as any of the 48 or maybe even of the 50. And I am no industrialist. Furthermore, I did not seek the job I now have, and cannot be said to have any preconceived objectives which I am striving to realize as Chairman of the National Labor Relations Board. Unless, therefore, I have prejudices on this subject, born of nothing, I can be most objective as I view the relationship of management on the one hand, and organized labor on the other, here in America.

I am truly distressed with the picture I see. While it is the official position of management to support the concept of collective bargaining by employees, great segments of employers, as evidenced by case after case coming before us involving union elections in the business and industrial plants of the country, take every legal step possible—and many employers overreach legality—to thwart their employees' efforts to organize even when the union involved is a respectable, decent union. And some employers harbor the thought, I am sure, that there is no such thing as a decent union unless it might be one dominated by their own companies.

I am troubled by the philosophy still present among some employers, in this State as well as others, of avoiding dealing with a union even at the expense of going out of business. The extent to which it has manifested itself, especially among smaller business establishment, has made me ponder this problem.

I concede that many businessmen have been sorely provoked by many unions. Threats of violence, actual violence, roofing tacks in driveways and sugar in gasoline tanks, slashed tires, and upset trucks do not exactly endear any part of unionism to the businessman who is going broke by reason of such unlawful practices, to say nothing of the corruption revealed by the McClellan committee. But today I emphasize management's responsibilities, as I am speaking, in the main, to representatives of management, assuming as I do that the number of lawyers in the Florida bar who represent unions is relatively very small. And, furthermore, I am speaking in terms of basic principles, not necessarily of unions as they are but as most might be if some of management's attitude were different. I raise the question as to whether responsible management should in good faith accept by word and deed the principle of collective bargaining and by wholehearted cooperation with employees and the representatives of their choice, take the initiative in turning the dog-eat-dog philosophy that prevails in many places between organized labor and employers, into a relationship of real teamwork.

In the very nature of things, management cannot expect to make the unions over. Management will do well to correct her own failings in this heated area. The same is of course true of the unions; but obviously if I were to talk to you today of the shortcomings of the unions I would only add fuel to a fire that seems at times now to be almost out of control. I reserve that for discussions with union groups.

I suggest to you that the basic principle of our present Federal law, which recognizes the worker's right to organize in dealing with his employer, or not to join with others so to deal, is here to stay and that it is right and just; and that the alternative would be a backward step ultimately subjecting all workers to the paternalism of their employers. It should be recalled that it was the feudalism of the Middle Ages, followed by the sweat shop conditions of more recent times and bitter industrial strife, that was the forerunner of the present law and that this law articulated that free Americans, entitled to a fair living and decent working conditions, would not be denied the right to organize and to bargain collectively with their employers. I am not suggesting that all employers should accept all unions, or any union for that matter, with open arms. It is not to be denied that some employers maintain such favorable working conditions that employees may not need or desire concerted action. Also, some unions have proven utter lack of capacity fairly and honestly to represent employees.

Few employers in this enlightened age openly admit that they would, even if they could, completely thwart unionism. Today, however, I want to look behind this facade of general acceptance of our national labor concept and to reach a behind-the-scenes, illusive, undeclared warfare that I believe involves an actual rejection by much of management of these basic principles. Since hostility is likely to beget hostility, I raise the question as to whether this attitude may in turn be at least partly responsible for union conduct that many people regard as quite unreasonable even though lawful. It is quibbling to embrace the abstract principle of collective bargaining and then fight tooth and nail to deny it to one's own employees. When our businesses and industries of common characteristics seem to find it good and necessary to join together to solve their common problems and advance their common purposes, and delegate all sorts of specialized functions to agents of their choice, it seems difficult to find a valid objection to workers' concerted action through agents of their choice.

In an effort to let you see the picture I am trying to sketch, I should say that the National Labor Relations Board was not created to assist unions in their organizational efforts. Most of you, of course, know that we act as an umpire to see that the rules are followed. But there seem to be some lawyers who do not disabuse their client's concept of the Labor Board as an integral part of a devilish scheme to put some union in charge of his business. Our main purpose, encompassed in our enforcement of all the provisions of the national Labor-Management Relations Act, is to see to it, on charges duly filed, that the heart of the act, section 7, is made effective. This section guarantees an employee the right to join or not to join a union free of coercion from both his employer and the unions. But many employers, and apparently some of their attorneys, seem to feel it is still their God-given right to determine unilaterally what is best for their particular employees, and that unions and the Board are usurpers of that right, which usurpation can be met only by keeping the union out at all costs.

This attitude within this State, I think, has been reflected in the reception our Board personnel had initially, at least, when in 1956 we established a regional office in Florida. We carefully selected a Regional Director who is a native of your State, a lawyer knowledgeable in our act and, we think, as

fair and objective as a man can be. It is his function and the function of his staff to enforce the law for, and against, unions, and for, and against, employers, with equal fairness and vigor, in the protection of the individual employee's rights. And this I can promise you is exactly what he will do if you will seek his aid and give him your cooperation.

Let me deal with just a few specifics to illustrate that cooperation with the Board has not always been forthcoming. Our jurisdictional standards require a determination of the volume of business done by the company involved to ascertain if there is sufficient impact on commerce to warrant our intervention. Generally speaking, employers furnish such information willingly. Florida became conspicuous in our agency because of the frequency of subpoena proceedings required to get such commerce data. Finally, however, Supreme Court decisions and the rule we laid down in the Tropicana case, coming from this State, have resulted in much less difficulty for us in this area. In Tropicana, the Board decided that in any case where it had legal jurisdiction and the respondent company was recalcitrant in furnishing data needed to determine if the business met the jurisdictional standards, we would assume it had sufficient business, and put the burden on the company to prove otherwise. It is somewhat ironical but Florida can thus be credited with this salutary principle.

We think that some State court judges and Federal district judges, including some in Florida, continue to exercise jurisdiction where it has been fully preempted by the Federal Government and lodged exclusively with the National Labor Relations Board. The Supreme Court, in a series of decisions extending to April of this year, when the Garmon case was decided, has drawn a fairly clear line in this area that should not be so very difficult now to follow. While the Board has not been overly jealous of its jurisdiction, only confusion results in any situation where any court seeks to function without real authority.

In dealing with Florida situations involving the National Labor Relations Board, the hotel industry and our recent decision with respect thereto cannot go unmentioned. Last week we assumed jurisdiction over all hotels doing a gross annual business of $500,000 or more. This came about through litigation arising in this State. The Supreme Court had held that the Board had not been justified in denying jurisdiction solely by reason of its long-standing policy of excluding hotels as an industry. In reaching our decision to exercise jurisdiction on the $500,000 standard, interested parties, employers and unions alike, filed briefs and we heard oral argument. The employer position in this proceeding was against extension of jurisdiction over the industry, but even as the case was being considered we were importuned to come to the relief of employer hotels in a dispute here in Florida. The case could not come before us as we had not then decided to take jurisdiction over hotels. But this illustrates that our jurisdiction is deemed good or bad depending largely on whose ox is being gored.

You may agree that I have spoken quite frankly about the shortcomings of some employers, especially in your own State, in their approach to this important economic problem of labor-management relations. I wish I could feel, in making this kind of speech, that I was actually doing some good in an area where I am sure much needs to be done. But I know my very subject matter carries its own barrier to acceptance—where management insists on its own way, and unions do the same, and the third way, along some middle ground, necessarily gets little attention. Some union leaders continue to berate management as if management were a mortal enemy. And some of management privately oppose unionism as such, and temper their public pronouncements as required to suit the public mind.

The lawyer's chance for a key role in reconciling these opposing forces stems largely from his professionalism which calls for a degree of aloofness to the money-madness that stifles our society. True, many a lawyer will operate in the little area delineated by the cone of his vision as he fixes his eyes on a fee. But even if such a lawyer makes a million "keeping the union out at all costs" he will never really be significant in the development of Florida, or of America, or in advancing or preserving our civilization. The Florida bar, I am sure, abounds in potential Thomas Jeffersons who could again give voice to other versions of Jefferson's great pronouncements. The Patrick Henrys of our profession, and there are many, are not concerned primarily about the fee but great principles founded in righteousness. This dynamic and controversial field of labor-management relations is filled with emotional and explosive clients. It needs the attention of hosts of reconciling lawyers. We need some of Abe Lincoln's ingenuity. He had an obstreperous client who insisted on replevining a trunk of little value, mostly to spite his adversary by dragging him into court. Lincoln counseled against it to no avail, and then solved the knotty problem by charging his client a fee of $15; buying the trunk for $10; and delivering it to his unyielding client. Thus lawyers on both sides of the controversy, more effectively than any other segment of society, can help produce labor leaders less inclined to get all they can get, and more inclined to give a little, and management people more concerned for their workers' welfare than they are for an ever-growing profit column.

Pictures often speak louder than words. I think the International Ladies Garment Workers Union may have had this in mind in a recent newspaper advertisement. It shows on one side of the page the hand of the Statue of Liberty holding high the flame of freedom. On the opposite side is a little child's hand holding an ice cream cone, typically American, and intended to be a symbol, as I interpret the ad, of the material advantages our industrial system has brought to all our people, including those who labor for their livehood. As I read the ad I thought of the inscription that appears on the base of the great American goddess as she stands in New York harbor. I couldn't recall it well then, but I give it to you now:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore;
Send these, the homeless, tempest-tossed, to me:
I lift my lamp beside the golden door."

I think none of us knows exactly what has made America what she is. But we do know many of the parts that make up her system. Among them are opportunity for private initiative, private ownership of property, the investment of private capital for profit, and a trade union movement, the heart of which is the right of workers to bargain collectively. No American should recklessly or surreptitiously attack any known ingredient of our system, for the part attacked may be the key to such success as we have attained.

We will all agree that the American way is under serious challenge. It will not be easy, but it is very important, that the torch of liberty keep burning brightly for all segments of our society, and that the inscription at its base remain true. Thus the hands of all our children shall remain free to grasp the ice cream cone that stands for material well being. I am persuaded that lawyers, along with the clergy, the teachers, the engineers and the scientists of America, have the opportunity for greatness, as this exciting and vital drama unfolds. You alone, of course, can determine your own part—whether it shall be an ennobling contribution or a harmful detraction. You must decide for yourself whether to join the constructive forces that serve humanity and solve problems or the deplorable forces that only add new problems to the old. What you do collectively will have a great influence on your State and could have a marked effect on America and this civilization.

Character Training—An Address by Geraldine Earlin

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. OSMERS. Mr. Speaker, my constituent, Mrs. Geraldine Earlin, of West Englewood, N.J., delivered a very fine address on character training at the education forum of the New Jersey Federation of Woman's Clubs Education and Youth Conservation Conference, held at Asbury Park, N.J., on April 7, 1959. Mrs. Earlin is widely known for her constant advocacy and devotion to the highest patriotic ideals.

In addition to speaking wisely and plainly on character training for our youth, Mrs. Earlin also makes out a good case for the passage of a resolution by Congress which would designate February as American History Month. My House Joint Resolution 120 has that as its purpose. Under leave to extend my remarks in the Appendix of the Record, I ask unanimous consent to include this fine patriotic document:

CHARACTER TRAINING

There is an extreme and urgent necessity for teaching our youth love of God, love and loyalty to family, and to our county and its Constitution as written by our Founding Fathers if we are to survive as the great nation which is by right our heritage.

To show these needs I have taken statements made by prominent people in various walks of life and the first ones are from a sermon which I was privileged to hear several Sundays ago: It is love, not the vaunting of authority, that can make a home a happy home. The happiest home is the home in which father and mother and children are one in love of God, and of one another. Riches do not make happy homes. When husband and wife truly love each other, they have treasures which no wealth can give, and no poverty can take away. Loving God, they abide by His holy will. Their home is a sanctuary built for God's glory, a haven of refuge wherein love and peace are ever found, a nursery from which good citizens are given to the state and saint to heaven.

We need homes like these for the support of honesty and decency and truth in this Nation. No country is stronger than its homes. They are the foundation upon which ultimately, under God, all hope for sound

and solid progress must rest. No nation, whatever its wealth and influence and power in the world may be, has ever been able to tear the Almighty out of the hearts and homes of its people without witnessing the foreboding of approaching disaster.

The New York State Board of Regents issued a statement, March 28, 1955, on "America's Moral and Spiritual Heritage," which will be hailed by all who believe in God, the moral law and the principles laid down by our Founding Fathers. The statement reiterates the principle that "Belief in and dependence on God is the very cornerstone upon which our Founding Fathers builded" and cites the Declaration of Independence, the pronouncements of Washington, Franklin, Lincoln, Jefferson, and Dwight Eisenhower as proofs.

The Regents call on schools to stress spiritual heritage; to have the children inspired by the example of their ancestors; to be guided by the faith and love of their parents; to be encouraged by their spiritually sensitive teachers, so that there will be renewed in their daily lives America's moral and spiritual heritage:

"Liberty under God—respect for the dignity and rights of each individual—devotion to freedom."

Throughout our entire history as a Nation, these fundamental beliefs have been our guiding star and our compass in time of storm and trouble.

In the words of the Chancellor of the Board of Regents, opening the 1955 convocation "Freedom is not free—it must constantly be defended and cared for lest we lose it. That is the price we pay for it. We must reinterpret for our children the initiative, the courage, and faith of the Founding Fathers. We must root deeply in our hearts faith in the unimpeachable dignity of the individual and in the unquenchable spirit of free man."

One of our great generals, Gen. Mark Clark, recently said that he believes most of our people would be better Americans if they were more demonstrative, more sentimental and emotional in the performance of their patriotic duties. He suggested there should be more frequent and more enthusiastic occasions for patriotic demonstrations in America to give our people higher concepts of loyalty.

The fundamentals of good Americanism, he said, are faith in our country, its Constitution, its laws and history, and its spiritual and religious dedication. Teach these fundamentals to young Americans, and they in turn and time will keep America great.

It is not old fashioned, but the duty and challenge of Americans in all generations, to give youth faith, to teach youth conviction and courage, to inspire youth with religious and moral guidance and to make youth worthy of its American heritage.

Circuit Court Judge, Jacob M. Braude, Cook County, Ill., said in a recent article (Family Weekly, Mar. 15, 1959), there are 15 factors in the pattern of delinquency besetting our young people today. He said he could think of no instance of a boy or girl in trouble in his court where one or more of these factors weren't directly responsible, and all of them can be controlled. Among others he listed improper literature, idleness, and unemployment, lack of religious training, lack of discipline in the home and the schools. He said crime prevention begins in the high chair—not the electric chair.

In the September 1956 issue of Scouting magazine, Dr. Arthur A. Schuck, chief Scout executive of the National Council, Boy Scouts of America, wrote an article entitled "Our Answer to Brainwashing," in which he was discussing the meanings of the Scouts' 4-year program, continuing through 1960, "Onward for God and My Country." In the course of his study he was also discussing how the Chinese Communists in Korea were able to break many of our American boys, taken prisoner, because in his words:

"Too many of them proved woefully lacking in basic knowledge of American history, institutions, and ideals, and quite unable to produce reasons for their belief in democracy."

In discussing the study made by the committee appointed by the Secretary of Defense, he said it found:

"There was often a failure to know about or appreciate the hardships endured by our forefathers in building a free nation, or to accept the need for similar sacrifices today to keep our Nation strong. On the other hand there were those who found that their faith in and loyalty to family, country, religion, and comrades were shallow and weak under stress.

"The committee * * * concluded that the weakness of the men who broke involved traits that cannot be imparted in a few months of military indoctrination but are the product of years of training in home, school, church, and community. Our whole system of education, formal and informal, needs to make sure that our young people are thoroughly grounded in moral and religious principles. Our children as they grow up must not merely take American values for granted. They must be so familiar with the fundamental facts of American history, American government, American economic and social life that they know why they believe in our way of life and need not be confused and embarrassed when critics challenge those beliefs. They must understand that it is a privilege and a responsibility for every citizen to be a part of the team as we plan and work together at local, State and National levels."

From an editorial in the May 20, 1956, issue of New York Journal American we read that Joseph B. Cavallaro, chairman of New York City's Board of Higher Education, suggested that American history courses should be compulsory in every tax-supported educational institution. This editorial said that from surveys made in 1950 it was learned that 76 percent of institutions of higher learning did not include American history as a required course for enrollment and 66 percent did not make American history a required course in their own classrooms. Reportedly there has been some improvement but not enough for in 1955 a specimen college inquiry in Ohio revealed that a surprising number of freshmen did not know when or how the United States began.

Mr. Cavallaro emphasized that American history must be taught rightly—that our youth must know what is meant by American heritage and American ideals.

The editorial asks: "How is any American to be a good citizen if he has little or no knowledge of the proud and aspiring origin of his country, its magnificent traditions and ideals."

Both the paper and Mr. Cavallaro are in agreement that the antidote for communism lies in the full and proper study of American history. The best way to defeat subversion is for Americans to know what the subverters are trying to subvert.

Since it seems to be agreed by divergent opinions that belief in God and belief in and loyalty to our country is the recipe for molding our children's character, I believe you will be pleased to know that there are two bills in the House of Representatives, Washington, D.C., House Joint Resolutions Nos. 120 and 132, calling upon the President of the United States to always proclaim February as American History Month.

Passage of one of these bills would most certainly be a constructive move toward strengthening the loyalty and background in basic American principles of our youth. This great need was evidenced by General Dean, upon his return as a prisoner after the Korean war. You will remember that all of the press agreed that there was something lacking in the background of those soldiers who refused to come back and in those who collaborated with their Red captors. General Dean said we had failed these soldiers.

SOME INTERESTING FACTS

Since it seems to be agreed by divergent opinions that belief in God and belief in and loyalty to our country is the recipe for molding our children's character, you will be pleased to know that our General Federation of Women's Clubs does have a resolution "U.S. History a Required Course." Unfortunately, there are but eight States in the Union that do require American history to be taught in their high schools, however, New Jersey is proud to be one of those eight States. I can think of no better project for our general federation than to see that every State passes a history bill similar to that of New Jersey.

Since much of the responsibility of the founding of our country lay on the shoulders of George Washington, the Father of our Country, and since his birthday and that of Abraham Lincoln and Thomas Edison, whose life exemplifies what can be accomplished under our free enterprise system (which is truly American) I am sure you will be pleased to know that the New Jersey Legislature adopted Senate Joint Resolution No. 1 on January 19, 1959, designating February as American History Month and called upon the Governor to always proclaim the occasion. The resolution also called upon our citizens to plan appropriate programs commemorating these three men.

You will also be pleased to know that the New Jersey State Federation of Women's Clubs is urging all clubs to support this movement. Also you might like to know that at the January meeting of the board of directors of the New Jersey State Federation of Women's Clubs they took action to call upon Governor Meyner to proclaim February American History Month this year. He has done so for the past 3 years and there have been 38 or more Governors throughout our Nation who have made such proclamations each year.

It is encouraging to know that the Wayne, N.J., public schools have implemented an Americanization program on American history through the cooperation of the American Legion Post No. 174 and school administration as reported in the January 22, 1959, North Jersey Times. They plan to have prominent military and civilian personalities come to Wayne from time to time to speak to their high school students. Their first speaker was Capt. John Bulkeley, U.S.N., World War II hero, who evacuated Gen. Douglas MacArthur from Corregidor. He told the students the surest way to combat communism was through education and pointed out that but 8 percent of the American prisoners of war in the Communist camps in Korea were able to resist the Red philosphy and these because they were educated and knew what they were fighting about. He said that 80 percent were indifferent and 12 percent succumbed to communism.

He charged that the American people have forgotten the meaning of July 4th, the Declaration of Independence, and the Constitution and predicted failure to recognize the danger and combat it would bring about the loss of all that had been accomplished for the freedom of men in 2,000 years. He called for a program for instilling knowledge and pride in young folks of the great heritage that is theirs and urged for a reevaluation of all that the United States has stood for and that only this knowledge and the determination to fight for it would halt

the advance of foreign ideologies. (From Jan. 29, 1959, North Jersey Times.)

This same school system has just approved a course for their seniors on the subjects: "What Is Communism?" and "What Is Americanism?" based on the book "Masters of Deceit," written by J. Edgar Hoover, FBI Chief. (From Feb. 19, 1959, North Jersey Times.)

Senator HUGH SCOTT, Republican, Pennsylvania, addressing a meeting of the American Bar Foundation, February 22, 1959, called for a "drastic overhaul" of American education "before patriotism goes out of style." He said, "We need unremitting emphasis on the origin of our Nation, on what made it strong and great and kept it free, and upon the fundamentals of our national purpose." He also said, "I would like our schools to stir our students to love of country, to prepare them to counter the washers of brains. If this be 'propaganda,' I would also like our Armed Forces to employ much more of it."

The Senator called the lack of patriotic indoctrination "an infinitely more dangerous gap than lack of missiles." (Feb. 23, 1959, Daily News, New York.)

In a talk before the Woman's Club of Clearwater, Fla., in January 1959, Gen. William H. Wilbur, of Highland Park, Ill., referring to the crime and corruption in this country today, said the FBI reports that of the 2½ million crimes committed, the major half was by persons under 18 years of age. He said "America has greatly changed in less than two generations," as he spoke of the permissive philosophy which abounds today.

In quoting Judge Sam Leibowitz of New York he said, "A child must be disciplined to do the things he does not want to do." And in this connection he continued by saying, he had been fortunate in reading from the handwriting of George Washington, the 110 rules of conduct which at the age of 11, he lived by. (From Clearwater Sun, Florida.)

The special commitee of Government officials and retired officers which studied the problem of American prisoners of war captured by the Communists in Korea said, "The prisoners of war who were taken in by the Communists had lost their battle before they entered the service. Good citizens—loyal Americans—the responsibility for their building lies with their home, the school, the church, the community." The committee suggested Government agencies get together with civilian educational institutions, churches and other patriotic organizations to prove better understanding of American ideals. (Millville Daily Republican, Aug. 23, 1955.)

Leap Forward, Dixie

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Ralph McGill, publisher of the Atlanta Constitution, which appeared in the Nashville Tennessean on April 23, 1959. The article is an interesting discussion of the South, its growth and expansion. Mr. McGill has a sympathetic understanding of the sociological problems it now faces and must work to overcome.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LEAP FORWARD, DIXIE

(By Ralph McGill)

WASHINGTON.—Pennsylvania Avenue is a street of beauty, memories, and legends. One of my memories of it dates to 1938. I turned in at the Pennsylvania gate and Steve Early steered me in for a brief talk with Franklin D. Roosevelt. I recall his conclusion: "The South must take a great leap forward."

He had not long before received the report of an all-but-forgotten President's Committee on the South. It had concluded, after long study by economists and sociologists, that the South was the Nation's economic problem No. 1.

It was true. Some were made merely angry. But others were stimulated to great self-examination and public debate. Forums, study groups, and ferment of talk began and have never stopped to this day.

The old agricultural South of tenants, sharecroppers, dubious paternalism, and isolation from the national mainstream was dead. A new South was in the long, hard travail of birth.

There were many exhibits of death and rebirth.

MOVING TO TOWN

There were the empty cabins in weed-grown fields. Here and there were lonely, sentinel-like chimneys where a cropper's abandoned house had burned.

And, in the towns, there were the dejected, displaced families. They were unskilled, and were offering their labor for what it would bring. They came into direct economic competition with the already depressed Negro workers. Relief offices were overburdened. I found myself thinking of these refugees from a broken economy years later when I saw the displaced persons camps in Europe. There was some of the same pathos in the faces, the hopeless, dumb questioning of the eyes.

All this comes back—walking by the White House and remembering the turning in and hearing Franklin Roosevelt say, "The South must make a great leap forward."

NOW IT IS HAPPENING

It is almost incredible that this was said so recently as 1938 because now, a mere 21 years later, the South almost literally is exploding with industrial expansion and development. It is in the midst, too, of a great sociological revolution. More and more people are leaving the land. Every year more rural counties become impoverished of population and income. The cities grow.

The great leap forward is being made—but it is by no means finished.

All the while education has been a part of the big jump. Schools and technical training—these are the jumping muscles.

In 1901, in a report published by the University of Tennessee, the average schoolhouse in the South cost $276 each and teachers averaged $25 per month. Five cents per day was the average per-pupil expenditure on those in actual attendance. And the average school year was but 87 days.

There was not much growth muscle in that.

Here, on Pennsylvania Avenue, stopping to look at the serene beauty of the White House with the green lawn before it, one feels the presence of history.

SYMBOL OF FREEDOM

This is a Nation. We are first of all Americans. Our first loyalty must be to the Nation. The White House is the symbol of the free representative system. We accept the results of elections. Once, just once, there was refusal to do so. The South dissented from Lincoln's victory. The price paid for that was a terrible one.

The Supreme Court Building and its Justices are the symbol of law. There may be those who will refuse to accept a rule of law and the orders of the courts. We may freely disagree with and criticize the courts and decisions. But if we ever defy courts and law, or cause people to doubt them, then the Nation is finished.

There can be just one victim of closed schools. That is the school child. Despite the loud and distorted clamor of defiance, the voice of the school child can be heard asking "What about me?" We tend to forget that an educated child is more important to the future than a prejudice or any man's political future.

The American way is law and justice.

The South must make a long leap forward.

Supremacy of the Law, Our Common Law Heritage

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled, "Supremacy of the Law, Our Common Law Heritage," delivered by Mr. Ross L. Malone, president of the American Bar Association.

This address was delivered on the very fitting occasion of the unveiling in Jamestown, Va., on May 17, 1959, of the plaque on Jamestown Island commemorating the advent of common law at Jamestown in the year 1607.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SUPREMACY OF THE LAW, OUR COMMON LAW HERITAGE

(Address by Ross L. Malone, president, American Bar Association, on the occasion of the unveiling of the plaque on Jamestown Island commemorating the advent of common law at Jamestown in the year 1607, Jamestown, Va., May 17, 1959)

The American Bar Association and its president are honored by the invitation to particiapte in this unique and significant occasion. While the event which we commemorate today has special significance for the State of Virginia, the common law of England has had a marked and continuing influence upon the entire Nation in many aspects of its life.

This is particularly true as to the lawyers of the United States in the day-to-day practice of their profession. The common law of England permeates their lives and their thinking. It influences their advice to their clients and forms the basis for the protection of their clients. It provides the framework for the jurisprudence of 49 of our 50 States, and at least one legal scholar has concluded that, in effect, the 50th State, Louisiana, also has adopted the common law.

To an even greater extent the judges of this country are affected by the common law in the performance of the vital function of the courts. It always guides them, and frequently it controls their decisions. The common law of England, as it has been found applicable to life in the United States, and as it has been modified by our courts and legislative bodies since the separation of the Colonies from England, is the law of the United States today.

The charter which James I issued for the Virginia Colony in 1606 was not limited to lawyers and judges in its impact upon the United States. Its provision that "all and every the persons being our subjects, which shall dwell and inhabit within * * * said several colonies and plantation * * * shall have and enjoy all liberties, franchises, and immunities, within any of our other dominions, to all intents and purposes, as if they had been abiding and born, within this our realm of England, or any other of our said dominions" has influenced the lives of all of the citizens of our country.

President Eisenhower, in proclaiming Law Day in the United States in 1959, described the place of law in our lives when he said, "A free people can assure the blessings of liberty for themselves only if they recognize the necessity that the rule of law shall be supreme and that all men shall be equal before the law," and continued, that "this Nation was conceived by our forefathers as a Nation of free men enjoying ordered liberty under law and the supremacy of the law is essential to the existence of the Nation."

The seed of the common law of England was transferred to the new world by the charter of James I. It was planted in this soil by the Advent which we today commemorate. It germinated and flourished in its new environment, and on separation of the Colonies from the mother country survived the separation from its source, and lived to provide the very foundation of the unique governmental form which the Colonies gave to the world.

The very fact of its survival testifies to the soundness of its conception, and to its vitality. When we look around the world at the countries to which the vigor and initiative of England has transplanted the common law, we conclude that the common law is indeed, as Chief Justice Harlan F. Stone described it, "the expression in legal form of the genius of the race".

At an international conference of lawyers, which I attended recently in Australia, a native lawyer of the Federation of Malaya, the newest member of the Commonwealth, rose and paid a tribute to the common law which was magnificent in its simplicity. He said, "We have had the English common law for over 100 years. It is the finest law in the world."

Chief Justice Stone, in his analysis of the common law, found that it had three distinguishing characteristics: Its use of the jury to decide issues of fact; its development of law by a system of judicial precedent; and its "all pervading doctrine of the supremacy of law".

The first characteristic, that of the use of the jury, has since become a casualty of World War II in England. It is no longer in general use in civil cases there and its use in criminal cases has been curtailed. The United States may follow the same pattern ultimately, but the day appears far distant.

The common law system of judicial precedent for the development of law, to which Chief Justice Stone referred, is the principal characteristic of the jurisprudence of this country and a major source of its strength. It is an inherent part of the system which we received from England and its development has continued in this country.

In many respects, the genius of the common law is the process by which judicial precedent is applied to the solution of controversies in the light of current conditions. Through such application our courts provide stability, yet avoid immobility, in our judicial concepts.

Overemphasis upon precedent produces immobility. Undue weight given to current conditions destroys stability. The balancing of these two factors which has occurred through the years in the courts of this country, and of England before us, has made possible the strength and longevity of the common law.

The third characteristic of the common law mentioned by Chief Justice Stone, "the all pervading doctrine of the supremacy of law," has reached its highest state of development in the United States. Our unique constitutional system, in which the separation of powers is accomplished and the rights of our individual citizens are defined, has resulted in the elevation of law to a unique position of supremacy as a component of our democracy.

The termination of "the supremacy of law" in this country is our most direct path to self-destruction. It is a path which divides very early; one fork leads to anarchy, the other to dictatorship. It is difficult to say which destination is the more lethal to a free people. The supremacy of the rule of law, and of the institutions by which law is made effective is our protective barrier against this forked path to self-destruction—a barrier the maintenance of which is dictated by our own self-interest.

Dean Roscoe Pound has pointed out that a necessary aspect of the supremacy of law, under the common law concept, is the existence of independent courts. Thus he said, "In the Roman Empire and in the tradition of the civil law the judge is a part of the administrative hierarchy. At common law he is independent. He wields the royal authority to do justice. He is not accountable to administrative superiors. In the words attributed by Coke to Bracton, he decides under God and the law. His independence is guaranteed."

Independent courts are essential to the supremacy of the law in this country. They must be equally independent of government and private influence. Only through the existence of independent courts can the rights of individual citizens be protected and the Bill of Rights be a living force in our lives.

As a corollary to the necessity for independent courts, it is important that we have good judges. It is important that we have judges who understand the reason for the independence of our courts; judges who understand the difference between independent courts and independent judges; judges who will not abuse the independence of the courts upon which they sit.

The supremacy of the law, which we inherited as a concept of the common law of England, can be maintained only so long as it is undergirded by public understanding and confidence in the courts. Every citizen has a duty to contribute to that support. The legal profession has a primary responsibility for leadership in providing it.

The common law concept of the supremacy of law, which has contributed so much to the strength of this Nation today, assumes added significance at the international level. The impact of the nuclear and space ages upon a world, torn by disagreement and threatened by a cold war, has caused people in increasing numbers to turn to the rule of law as a relatively unexplored means for accomplishing the peaceful solution of problems between nations.

We have seen an ordered society emerge on this continent when the rule of law governs relations between men. Today we look hopefully toward the time when the rule of law will supplant force in governing relations between nations.

The countries which share the heritage of the common law of England have a special obligation of leadership in seeking that objective. When realized, it will constitute the realization of the ultimate potentialities of the common law in the lives of men.

Need for Executive Leadership in Defense Decisions

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. PROXMIRE. Mr. President, if there is any area in which the President of the United States is considered supreme it is in national defense. Military command requires executive rather than legislative leadership. The Constitution makes the President the Commander in Chief of the Armed Forces. The whole background of the present President qualifies him above all for decisions in the military field.

And yet in the current Nike-Bomarc controversy, the administration has turned to the Congress to make an executive decision—to exert the necessary leadership to recommend what course is in the national interest.

Mr. President, the Milwaukee Journal perceptively discusses this issue, particularly in the light of the observations on this administration failure discussed in a recent speech of one of this body's outstanding experts on national defense, the junior Senator from Missouri [Mr. SYMINGTON]. I ask unanimous consent that this editorial from the Milwaukee Journal be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EXECUTIVE DUCKING OF DEFENSE DECISIONS CAUSES CONFUSION

The Army is protesting a recommended slash in Nike Hercules launching sites with a vehemence that borders on insubordination.

In some quarters there undoubtedly will be an inclination to brush aside this outspoken criticism of the Senate Armed Services Committee action as pique. And there may be some of that because of the committee's apparent preference for the Air Force Bomarc, which is also a nuclear tipped antiaircraft missile but with greater range than the Nike Hercules.

But back of the committee's action and the Army's reaction lies something far more serious—the failure of Secretary of Defense McElroy and President Eisenhower as commander in chief to exert the leadership expected of them.

In its news columns the New York Times reported that the committee recommended elimination of three-fourths of the Nike Hercules launching sites in order "to force the Pentagon to choose between" the two antiaircraft missile weapons.

And in his weekend speech in Milwaukee Senator SYMINGTON (Democrat, of Missouri) noted that McElroy in his appearance before the committee suggested that Congress "put the Pentagon's feet to the fire" to force defense officials to eliminate missile duplication, such as that between the Nike Hercules and the Bomarc.

For a Secretary of Defense to make such a statement is incredible. It is a confession of ineffectiveness. It is as though the president of a corporation went before his board

of directors and asked the board to force him to make up his mind whether product A or product B should be given the company's major sales push.

Congress should not have to put anyone's feet to the fire. Decision making of this type is an executive responsibility. President Eisenhower said so at his May 13 press conference. When asked about eliminating missile duplication, he said, "I believe that it really belongs in the executive department. We cannot duck our responsibility in this particular place."

But what happens when the responsibility is ducked—when the Defense Department and the President neither decide between competing missiles nor state clearly why both are needed? Then unsatisfactory competition continues, as it has in the 1,500 mile missile field between the Army's Jupiter and the Air Force's Thor.

Is the reduction in Nike Hercules launching sites proper, or is the Army right when it says it is too risky to cut back the 100 mile Nike Hercules at a time when the 400 mile Bomarc is still not operational?

We are certainly not competent to say, and we doubt if many Congressmen are. It is not their decision to make anyway. The choice should rest with the Defense Secretary, acting on advice of the Joint Chiefs of Staff, and with the backing of the President.

Address Delivered at Dedication of Kazim Temple, Roanoke, Va.

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Imperial Sir George E. Stringfellow, A.A.O.N.M.S., of East Orange, N.J., at the dedication of Kazim Temple, Roanoke, Va., April 18, 1959, together with an editorial from the Roanoke World-News entitled "In Our Own Opinion."

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

ADDRESS BY IMPERIAL SIR GEORGE E. STRINGFELLOW, A.A.O.N.M.S., EAST ORANGE, N.J., AT THE DEDICATION OF KAZIM TEMPLE, ROANOKE, VA., APRIL 18, 1959

It is always a pleasure to participate in ceremonies dedicating a new temple of the Ancient Arabic Order Nobles of the Mystic Shrine. It is particularly gratifying to me that our newest temple should be here in the Blue Ridge of my own native Virginia.

To the officers, past and present, and to all of the nobility of Kazim Temple, I bring to you the greetings and the good wishes of the imperial council and the imperial divan of our great fraternity. I congratulate you on a job well done. It is a beautiful temple that will in theory, if not in face, become in the years ahead an ever welcome oasis for the more than 830,000 nobles who travel this way.

It has been 89 years since Dr. Walter M. Fleming wrote the original ritual of the Shrine which is now on display in the Shrine Rooms of the George Washington National Masonic Memorial in Alexandria. It has been 87 years since Dr. Fleming, Billy Florence, and 11 other friends gathered in the old Masonic Hall in New York and created Mecca Temple and thus founded a new order, wherein Master Masons of the higher degree might find refreshment from their labors in the symbolic and philosophic crafts of builders.

It has been said that Dr. Fleming and his associates builded better than they knew, but those early years were indeed a struggle. As we look back on it now, it seems inconceivable that the Shrine could have existed at all. At the end of 4 years, there were hardly more than a hundred members. Only one ceremonial performance of the ritual had been achieved. The fraternity had been financed almost entirely out of the pocket of Dr. Fleming. But such was the faith and the energy of this man and a few of his friends that slowly at first, and then with a great surge, the Shrine began to grow, and now—today—it is the most glamorous of all fraternal orders. It is the same great heritage of faith, transmitted more than three-quarters of a century later, to the nobility of Kazim Temple, that has made this great new structure possible. Here in this temple, in the beautiful new Cathedral of the Scottist Rite next door, and in your blue lodges, you Shriners of Roanoke must and will carry on the great traditions that are your heritage.

Here, you Shriners of Kazim, will find the pleasure, the joy and the fun to which your merry hearts are entitled. Here, you Shriners of Kazim, will practice the charity, indulge the honor and enhance the glory your reverent minds have created in this fraternity. But there is even more than all this.

It is here—in this temple—in the cathedral and in our lodges that we Masons and Shriners must forever continue the struggle for human liberty and the freedom of the individual. The very name of our fraternity bespeaks freedom. We are Freemasons, and we must forever be free.

But liberty and freedom do not come easy. Your own great John Randolph of Roanoke knew this to be true, and he fought throughout his life that right and justice should prevail. Randolph said: "Among the strange notions which have been broached since I have been in the political theatre, there is one that has lately seized the minds of men, that all things must be done for them by the government, and that they are to do nothing for themselves."

Randolph knew this should not come to pass. It was then—and now—the purchase price of votes of power-mad individuals and groups of individuals who demanded change for the sake of change; and Randolph knew that this lust for innovation always had been the death of all republics.

Freemasonry and the Shrine, wherever their light has shown in the dark passages of controversy, have always stood for the right of freemen to seek and know the truth. Masonry and the Shrine will never ground their arms in the fight for freedom of the intellect, for liberty of conscience, and the right of all men to stand erect, unfettered and unafraid, equal before God and the law, each respecting the rights of his fellows. The demand we make is for government without tyranny and religion without superstition.

No amount of propaganda from the socialistic dreamers and the fuzzy-minds, and no amount of calumny that may be dropped on the heads of those who seek and find the truth must sway us from our Masonic mission. Even the edicts of the Supreme Court or the laws of the Congress cannot change the truth. And in the end, truth must and will prevail.

The world is now engaged in a struggle to determine whether all men shall be free, or whether they shall become the puppets—or worse, the slaves—of a comparatively few men who seem to wield a devilish power over the multitudes, who either cannot or will not seek the truth. In Russia, in Asia, in Africa, and in the islands of the ocean, there is a constant clamor designed to bring all men under the yoke of some kind of socialism. There is a demand for the levelling of all men—but those who preach this Godless philosophy know full well that the level to be attained will be slavery to the many.

Masonry and the Shrine will have no part of it. That is why during my year that it has been my privilege to serve as the imperial potentate of the Shriners of North America, I have constantly urged that every Shriner participate more fully in his blue lodge, for it is there at the altar that we learn the lessons of friendship and love and honor. It is there that we find the light that will guide us to the truth. And it is the truth that shall keep us freemen in this world of confusion.

In the future, this new temple will ring with the joy that is the Shrine. The bands, the marching units that have paraded the Shrine into a glory all its own, the clowns, the dances, the fellowship and the communion of men, must and will bring a great new spirit to Kazim. And it follows that this great new spirit of Kazim will bring a greater and better life for the people of Roanoke.

And in the future, this great new temple will help to reveal the great love of Shriners everywhere for those little children who are our guests in the mansions of mercy we call the Shriners' Hospitals for Crippled Children. No greater evidence of true love ever graced America. Here were kids without a chance, until Freeland Kendrick and Forrest Adair combined to lead the Shriners of North America into what has been called the world's greatest philanthropy. This great work is now being expanded under the inspiring leadership of Hon. Galloway Calhoun, 33 degree, past grand master of the Grand Lodge of Free and Accepted Masons of Texas, past imperial potentate, A.A.O.N.M.S., and president and chairman of the board of trustees, Shriners Hospitals, Tyler, Tex. We do not seek Government support. In the tradition of Masonry, we do it for ourselves. Charity is the expression of love. For our little guests, our gifts are presented in the spirit of the teachings of the craft, not as a publicity medium for the selfish.

The hope of the world lies in the teachings of Masonry and the Shrine. Though Masonry is not a religion, it is nevertheless religious. It expresses and teaches man's reverence for the Supreme Architect of the Universe, who has builded here on earth his temple of humanity.

To the joys and pleasures of tomorrow; to the love of one man for another; to the freedom of thought and the liberty from tyranny; to the Great God of mankind, we humbly dedicate this temple of Kazim.

[From the Roanoke World-News, Apr. 18, 1959]

IN OUR OWN OPINION

TWO NEW MASONIC TEMPLES OPENED

Members of Kazim Temple of the Shrine and members of the Scottish Rite bodies have just cause for pride in their beautiful new temples which are being dedicated this weekend.

The adjoining modernistic structures, located just west of Calvary Baptist Church on Campbell Avenue, provide southwest Virginia Masons with some of the finest facilities to be found anywhere in the country.

Formal occupation of the temples marks the realization of a long-held dream. For years they owned the big tract of land at Grandin and Brandon Roads SW., which became known as Shrine Hill although no structure ever was erected.

Eventually, leaders became convinced that less pretentious temples on a site nearer the center of the city would be preferable. At the same time the city school board was in the market for the site of a future high school, possibly an educational center.

Shrine and Scottish Rite officials got together with city council and the school board to effect a trade for the old Andrews property. Both have been well satisfied with the deal.

The corridor-connected temples have been erected and furnished at total cost of around $1 million. They stand as a tribute to the vision and determination of the two fraternal groups and as a credit to the city.

Presence of George E. Stringfellow, native Virginian and imperial potentate of the Shrine, adds particular joy to the 2-day program of dedication.

The World-News extends a welcome to him and salutes the two temples for this expression of their fine citizenship.

Our Unknown Planet

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an excellent article by James B. Kelley reviewing the accomplishments of the recently completed International Geophysical Year, which was published in the May issue of Commonweal magazine, be printed in the Appendix of the RECORD.

In this article, Mr. Kelley tells not only of the many successes of IGY, but also of the problems which arose in this international undertaking.

I invite attention to the concluding paragraph which affirms my own thinking on the beneficial results which can come from such international endeavors:

The net results of the International Geophysical Year seem to show that in those fields of human activity where men of good will are gathered for a worthy purpose, it can be assumed that the usual tensions and struggles associated with international politics can be submerged. This is a real step forward.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR UNKNOWN PLANET
(By James B. Kelley)

The primary objective of the recently completed International Geophysical Year—July 1, 1957, to December 31, 1958—was "the acquisition of data taken simultaneously at various points on the earth in order to give a planetary view of phenomena and events in most of the major fields of geophysics."

Any geophysical investigation, is of course, intensely difficult. For when the scientist undertakes to study the earth of which he is an integral part, he is in somewhat the same position as a man who might be dropped blindfolded into the middle of a dense forest and then told to describe this forest—its length, breadth, width, age, geographical location, topography and everything else about it—with only one assistance: he would be allowed to remove the blindfold, but he would not be allowed to move from the spot where he was standing.

Obviously, then, if the geophysicist or geodetist is to study the earth—and this means its internal composition, its topography, the floors of its oceans, the heights of its mountains, the composition of its atmosphere, everything about it—he must not be alone. He needs the coordinated assistance of every available hand and mind. Thousands of observations must be taken simultaneously, they must be taken at all seasons of the year; they must be repeated during some of those seasons to be certain that special conditions did not exist. In other words, the study of the earth is not a one-man or a one-nation job. For worthwhile results the study must involve people of many lands acquainted with many local phenomena.

Thus it was that while statesmen were walking a tightwire across a caldron of thermonuclear war threats, more than 50,000 men and women (and some children, too) from 66 countries of the world were cooperating in a massive effort to gather information about our planet and the universe in which it spins. Both sides of the Iron Curtain were represented, the only notable exception being Communist China, which refused to enter because of Nationalist China's participation.

From three world data centers—one in the United States, one in the U.S.S.R., and a third broken up into subcenters in Australia, Japan, and several sections of Western Europe—the information gathered was relayed and then farmed out according to its classification (solar activity, cosmic rays, seismology, meteorology, etc.) to the various subcenters under the direction of the main center. It is noteworthy that during the IGY the small nations of the world had an equal opportunity to show their strength and ability, this being one occasion where sheer weight of numbers or force of arms did not determine the importance of a national voice.

The background for the IGY is interesting. The idea started with Chevalier de Lamarck, a Frenchman, who early in the 19th century suggested and then began the first international collection of weather reports. In 1829, Alexander von Humboldt, the famous German physicist, set up a chain of magnetic observation stations which ranged across Europe to Peiping and on to Sitka, Alaska. Von Humboldt brought both the United States and Great Britain into the effort, and he was followed some years later by an Austrian naval officer, Lt. Karl Wyprecht, an Arctic explorer who proposed that a series of data stations be erected in various parts of the world for the purpose of gathering weather, geomagnetic, atmospheric, and geological information. As a result of this proposal, the Polar Year of 1882–83 was established. Fifty years later, in 1932, the Second Polar Year was organized, and more than a hundred data stations were set up in the polar regions.

The IGY which entered the planning stage in the spring of 1953 saw the greatest collection of scientific talent gathered for a single project in the history of the modern scientific world. And this IGY brought perhaps the most startling and impressive events to occur in our lifetimes—the successful launching from the earth of a number of artificial satellites.

As everyone knows, these launchings took on immense political significance. Since the U.S.S.R. was ahead of the United States by about 4 months, and in fact had two satellites in orbit before the United States had launched its first one successfully, many of the more important and basic studies of the IGY were lost in a welter of propaganda, claims, counterclaims and general excitement. To the scientist, of course, concerned as he was with no more than upper atmospheric studies, weather charts, space forces, space radiation, and scores of other atmospheric and space problems, the satellite was only an extremely important and valuable device for obtaining information which could be had no other way. Therefore, any successful satellite was to him an accomplishment to be welcomed. Things did not turn out that way, as we know, and since the world is the way it is geopolitically, the situation had to be tolerated geophysically.

But toward the end of the IGY the various satellites launched from the earth began to assume their proper significance in the press and in the public mind. Vanguard I, the American satellite launched in March 1959, is still giving invaluable information to the mapmakers of the world. And important as this contribution is, even more important, is the information it has supplied to geodetists on the shape and structure of the earth. Explorer I and later Pioneer I gave the world a picture of the spatial radiation distribution which was previously either unknown or inaccurately known.

All the satellites together, including the unsuccessful one, and the rockets which were sent aloft have permitted Dr. James A. Van Allen and his colleagues to plot the probable distribution of radiation up to a distance of 30,000 miles from the earth. The picture of this distribution changed several times as more information came back from space and at one point it looked as though manned space travel might be impossible because of the intense radiation at moderate distances—say, 10,000 to 20,000 miles—from the earth. Even after the IGY ended last December 31, the exploration continued, and a weather satellite is now circling the earth across the poles.

The full impact of the information which the rockets and satellites returned to the data centers on earth may not be known for several years, but even now, as the data continues to be processed and assimilated, is it clear that this new knowledge will have many and important uses. If from no other standpoint, the IGY would have to be counted a success in the extraordinary advances it brought in the field of rocketry. Concerning this point, few people seem to realize that a total of seven nations—Australia, Canada, Great Britain, France and Japan, as well as the United States and U.S.S.R.—launched 400 rockets and satellites during the IGY. Each of these rockets contributed a share in the year's total achievement.

While these 400 rockets searched space, and a half dozen others either went into orbit or probed reaches hitherto unknown by man, 20 countries sent 80 ships over the oceans of the earth in an effort to "place international oceanography on a firm footing." Among the notable oceanographic findings were indications that warm climates are moving north. And rivers were discovered in the oceans which behave much as rivers on land. They flow quite independently of the oceans, with the effect of delivering billions of gallons of water every second across thousands of miles of ocean. The discovery of these rivers, some of which flow from two hundred to a thousand feet below the surface of the sea, causes questions to be raised concerning the advisability of dumping large quantities of radioactive wastes into the oceans. Wastes dumped in a "safe" area of the ocean might possibly be carried thousands of miles by these rivers to other—not so safe—parts of the world.

The drifting and drift paths of ice—the iceberg is still a menace to shipping as events of this past winter proved—were also traced and charted anew during the International Geophysical Year. The coordination of the data gathered by the countries engaged in this phase of the study for the IGY is probably an outstanding example of the necessity of nations working in concert toward a single goal. Floating ice is a menace to all

shipping; the iceberg knows nothing of politics or philosophy, and appears to be fairly impervious to even the best detection methods. If the world's shipping was to be protected, information and data had to be brought together and examined not within national boundaries but within the chart rooms of the entire world.

It would not be honest to leave the impression that everything ran smoothly during the IGY, that there were no international differences. The struggle between the East and the West in Europe and throughout the rest of the world showed up more than once in the course of the year. Australia was not enthusiastic about having a permanent Soviet team in the Antarctic; these was some fear voiced that physical scientists might be replaced by military scientists at points a little too close to home. There was also some misgiving on the part of smaller nations that the great powers might decide to retain data which had possible military significance for fear of its falling into unfriendly hands. And Communist China's attitude was unfortunate, although this situation eased when Peiping later showed considerable interest in the IGY and in having the program continued for another full year.

Perhaps the biggest division between the East and West was raised at the Moscow Conference on the IGY held during the first 10 days of August 1958. The USSR backed by China, Poland, and East Germany, wanted to extend the IGY for another year. The United States felt it should be terminated. The case for both sides was good. The Soviet Union pointed out, with logic, that much work was yet to be done and hence the year should be continued. The United States said its Government had been committed for the 18-month period and was not prepared to carry on further with the same kind of effort. It maintained that there was much work to be done but that before this work could be undertaken intelligently an examination of what had been accomplished and what needed to be accomplished should be made.

The conference adjourned on the note that cooperation would continue in those areas where it seemed the most valuable results could be obtained. Provisions would be made for an exchange of data still to be gathered and, of course, the data already gathered would be published for the benefit of all. This was a compromise that seemed, to all concerned, eminently reasonable.

All in all, it can be recorded that the scientists of the world—and this includes the backyard observers as well as those in the great laboratories—were able to work together to increase their knowledge. They had their troubles, but it is important to remember that these troubles came not simply because they were Russians or Germans or Frenchmen or Americans or whatever, but because they were intelligent men who had real and legitimate differences of opinion. If they had not had such differences, this would have been not only unique in the annals of scientific investigation but downright suspicious. And if some people thought data were being suppressed, this would not be the first time this thought has occurred even among members of the same laboratory team.

The net results of the international geophysical year seem to show that in those fields of human activity where men of goodwill are gathered for a worthy purpose, it can be assumed that the usual tensions and struggles associated with international politics can be submerged. This is a real step forward.

Distressed Areas Still on Increase

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. FLOOD. Mr. Speaker, under leave to exend my remarks in the RECORD, I include the following fact sheet compiled by the Area Employment Expansion Committee in New York which sets forth the major chronically distressed labor market areas as of April of this year; an editorial entitled "Too Many Out of Work," from Life magazine of April 13, 1959; a press release from the Area Employment Expansion Committee, dated May 18, 1959; and, finally, a news article from the New York Times of May 25, 1959:

Area Employment Expansion Committee, New York, N. Y., Fact Sheet No. 37—Unemployment and labor force in major chronically distressed labor market areas, April 1959 [1]

Labor market area	Period of chronic distress		January 1959			March 1959		
	Start of labor surplus [2]	Number of months	Civilian labor force	Unemployment	Percent	Civilian labor force	Unemployment	Percent
Total			5,747,925	708,800	12.3	5,682,990	646,770	11.4

A PLEA FOR ACTION ON AREA REDEVELOPMENT LEGISLATION—TOO MANY OUT OF WORK

[From Life, April 13, 1959]

The paradox shown on the preceding pages—unemployment in the midst of plenty—is darkening the otherwise sunny slopes of a broad and growing recovery.

As Secretary of Labor Mitchell points out, unemployment may be expected to diminish soon and steadily. With industrial production close to its 1956 all-time peak, employers have just about reached the limit of stretching the work week of employed workers, and will soon have to start hiring others in order to keep pace with the recovery. Mitchell may be overoptimistic in predicting a drop to as low as 3 million (or about 4 percent, the 1955 level when the auto industry turned out a record 9 million units), but if 4 percent could be achieved that would be tolerable in a country this huge—provided the unemployment is chiefly frictional (men moving, or changing jobs) rather than chronic, like the permanent disemployment of the mountain miners.

Walter Reuther, as might be expected, overstates the case for big spending remedies, just as Industrialist Sligh may be underrating the case for Government concern. Promoting full employment is the official policy of the U.S. Government, and has been since the Full Employment Act of 1946 created a standing committee of Congress to help effectuate it. It is the Government's proper role to do whatever it can to keep the economy expanding and fully employed.

There is certainly room for debate on what measures are needed. Since the recovery is already strong, no pump-priming public works seem called for, save the new schools, hospitals, and urban renewal which are justified on grounds of social neglect. Since the chronic unemployment is so pinpointed, equally pinpointed measures are called for to attack it. The shifting of Government contracts and extension of unemployment assistance will help. But to a large extent many of the unemployed have lost their jobs forever, don't have the skills now needed to change, and often can't afford to move. Moreover, it would be a social waste to make ghost towns out of existing communities with their established schools, plants, roads, and other facilities. The real answer is to get new industries into these communities, and to retrain their unemployed workers in skills that are needed.

Such a program is the objective of two bills (by Democrat DOUGLAS, and Republican DIRKSEN) now before Congress, which differ principally as to the amounts to be spent and to the extent of Federal participation with State and local area development programs.

Although this type of program should have had top priority when the recession was at its worst, it was aborted last year because the Democratic Congress authorized more than President Eisenhower was willing to allocate to it, so he vetoed the measure. Since action is needed, and pronto, the President ought to exercise his own leadership on the No. 1 domestic problem confronting him, and make good his 1952 promise in New England that any threat of major unemployment would be met by "the full power of Government * * * instantly marshalled, instantly concentrated and localized." Let him get the opposing sides together to work out some compromise that he would be willing to sign if passed. Much can be accomplished by such programs, as trailblazing efforts by groups like the New England council have already proved, and could be greatly increased by the availability of assistance-loans for new development.

[Press release of Area Employment Expansion Committee, New York, N.Y., May 18, 1959]

NEW YORK, May 18.—While rising national employment has reduced total unemployment, the number of hard core, chronically distressed major labor markets has actually increased from 23 in January 1959 to 32 in April, declared Solomon Barkin, secretary-treasurer of the Area Employment Expansion Committee. With an average unemployment rate of 11.4 percent in March 1959, the latest date for which data have been compiled, the 32 major distressed areas have a civilian labor force of 5.8 million or about 9 percent of the Nation's working population. The 647,000 unemployed workers in these areas comprise 15 percent of total unemployment in the United States, Barkin pointed out. Additional areas will be added during the next few months with little likelihood of more than a few being removed.

The causes of chronic unemployment in these labor markets are the contraction or closing of the traditional, basic industries which constituted the economic backbone of these communities, he said. The shrinkage of employment in the coal mining, textiles, metal manufacturing, automobile, and durable goods manufacturing industries have left great gaps in the economic structure of these communities.

"April 1959 unemployment figures show that unemployment in the mining industry was 9.2 percent; construction, 11.3 percent; automobile manufacturing, 8.6 percent; and electrical machinery, 6.6 percent," he declared. "The high rates of unemployment in these industries, and in the textile industry, are basic to the continuing distress in these areas. They explain the persistently high number of persons, 1.4 million, who have been unemployed for 15 weeks or more."

The new major labor markets added to the list of chronically distressed communities as defined in the area redevelopment bill recommended by the Housing Banking and Currency Committee includes Connecticut: Bridgeport, Waterbury; Kentucky: Louisville; Michigan: Flint; Ohio: Lorain-Elyria; Pennsylvania: Pittsburgh, Reading, York; West Virginia: Wheeling-Steubenville.

The unemployment rates in the chronically distressed major labor markets have risen to unusually high rates, Barkin said. Scranton, Pa., has the highest rate with 16 percent unemployment.

"Unemployment has been persistent in these communities. In 12 of these labor markets, a substantial labor surplus has persisted for 3 or more years and in 7 markets there has been a surplus for more than 7 years. In none of these areas has there been less than 18 months of substantial labor surplus," Barkin declared.

The area redevelopment bill passed by the Senate earlier this year, and adopted by the House Banking and Currency Committee is designed to help these communities redevelop their economies, he concluded. This bill is now before the House Rules Committee.

(A subsequent release will provide similar data for the smaller labor markets throughout the United States.)

[From the New York Times, May 25, 1959]

DISTRESSED AREAS STILL ON INCREASE—MAJOR JOBLESS MARKETS RISE TO 32 IN 4 MONTHS—STATE'S PICTURE BETTER

Despite a drop in unemployment, the number of major labor market areas classified as chronically distressed is still on the rise.

This finding was made public yesterday by Solomon Barkin, secretary-treasurer of the Area Employment Expansion Committee and a labor economist. He found that from January, when the total stood at 23, to last month the number of hard-core distressed areas increased to 32.

Meanwhile, the State industrial commissioner, M. P. Catherwood, reported increased employment in three major cities. He noted that as a result Syracuse, Binghamton, and Buffalo had received lower ratings on the Federal list of areas receiving priority in the awarding of Government contracts because of unemployment. In the State as a whole, he said, the employment picture is brightening.

The 32 major distressed areas in the Nation have a civilian labor force of 5,800,000, or about 9 percent of the Nation's working population. In these areas about 647,000 workers are unemployed, about 15 percent of the country's total joblessness.

Mr. Barkin attributed chronic unemployment in the areas to contraction or closing of traditional or basic industries and the shrinkage of employment in coal mining, textiles, metal manufacturing, automobile and durable goods industries.

Among the new distressed areas are Bridgeport and Waterbury, Conn.; Louisville, Ky.; Flint, Mich.; Lorain and Elyria, Ohio; Pittsburgh, Reading, and York, Pa., and Wheeling and Steubenville, W. Va.

"Unemployment has been persistent in these comunities," Mr. Barkin said. "In 12 of these labor markets a substantial labor surplus has persisted for 3 or more years and in 7 markets there has been a surplus for more than 7 years. In none of these areas has there been less than 18 months of substantial labor surplus."

The Area Employment Expansion Committee, with offices at 99 University Place, was organized to press for legislation to aid distressed areas.

World Communications Center

EXTENSION OF REMARKS

OF

HON. A. S. MIKE MONRONEY

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD articles from the Washington Post of May 26, and the Washington Star of the same date, reporting on the agreement between Mr. William Zeckendorf and the newspaperwomen of Washington for the construction of a world communications center.

May I offer my congratulations to the women of the press who originated the idea in 1955 and to Mr. Zeckendorf for his desire to develop it.

As I understand it, the press community of Washington, which includes newspapers, radio, and TV, has quadrupled since the National Press Building was built 40 years ago.

Obviously there is need for a second press building—a modern building to house these farflung facilities. It speaks well for the newspaperwomen that since the idea for a new center was originated they have made it clear that the building should serve the best interests of all the press community, women and men alike.

Under the plans, I believe, the ladies would run the top penthouse floor as a dining room with guest cards for newsmakers and those covering the news.

The newswomen have long had a gifted hand in gathering such an assemblage together with glamorous and newsmaking results. The Nation's Capital has much to look forward to when the center is built.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post, May 26, 1959]

PRESS-RADIO AREA PLANNED IN SOUTHWEST

(By Elsie Carper)

A multistoried world communications center to house offices for the expanding press, radio, and TV industry is planned for the southwest redevelopment area by builder William Zeckendorf, president of Webb & Knapp.

The center will be a central feature of Webb & Knapp's design for the plaza, a 20-acre enclosed park area of office buildings, a hotel and theater, bordering the proposed 10th Street mall.

Two national press organizations ratified an agreement yesterday with Webb & Knapp to occupy the top floor of the building. The Women's National Press Club approved the memorandum of understanding at a noon meeting and the American Newspaper Women's Club at a meeting held last night.

Zeckendorf is to submit his plans for the plaza to the Redevelopment Land Agency on June 2. RLA, which holds title to the land, has an agreement with Webb & Knapp giving the firm first priority in the redevelopment of the plaza and other parts of southwest area C.

The center has been a project of the two clubs for the past 4 years.

In a joint statement, Lee Walsh, president of the Women's National Press Club, and Alice T. Curran, president of the American Newspaper Women's Club, said that the center, located close to the Capitol and White House, "should meet the up-to-date needs of national and international correspondents and news-gathering agencies."

Plans for the center include a press conference floor, specially designed and equipped radio and TV offices and studios, and a penthouse restaurant and bar with a panoramic view of the Washington skyline.

[From the Washington Evening Star, May 26, 1959]

NEWSWOMEN OK PLAN FOR CLUBHOUSE

The two Washington women's press clubs have ratified a memorandum of understanding with William Zeckendorf under which the New York real estate tycoon proposes to provide clubhouse space for the women in a world communications center in southwest Washington.

Parties to the agreement are the Women's National Press Club and the American Newspaper Women's Club.

The American Newspaper Women's Club, headed by Mrs. Alice T. Curran, met last night and ratified the agreement.

Mrs. Lee Walsh, president of the Women's National Press Club, said her group ratified the agreement at a Hotel Statler business meeting at noon.

The memorandum already has been signed by Mr. Zeckendorf, Mrs. Walsh, and Mrs. Curran.

Basically, it describes Mr. Zeckendorf's plan to build a 250,000-square-foot world communication center in the so-called plaza section of the southwest redevelopment area. The huge office building would be located between 11th Street and the proposed South (10th Street) Mall, extending from D Street SW. to the new southwest (F Street) freeway.

Mr. Zeckendorf's firm, Webb & Knapp, will present a plan for developing the larger plaza area, of which the communications center is a part, to the District Redevelopment Land Agency at a meeting June 2.

It was understood that Webb & Knapp officials also have sounded out the National Press Club—the newspaper men's club which excludes women—about participating in the proposed southwest project. The New Yorkers reportedly have offered to buy the National Press Club building at 14th and F Streets NW. Webb & Knapp officials, however, refused to discuss details of the talks.

Statistics Show Armed Forces Veterans Make Good Students—GI Bill Needed

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. YARBOROUGH. Mr. President, the veterans of this Nation's Armed Forces have distinguished themselves not only on the battlefield, but in the classroom as well.

During the hearings before the Senate Veterans' Affairs Subcommittee, which have just concluded, on the proposal to extend the benefits of the Korean conflict GI bill, a number of educators testified as to the emotional stability and general good conduct of veterans who attended classes on their campuses. Their work was more current and better prepared, these educators said, and veterans provided fewer disciplinary problems on the campus than nonveterans.

In addition, George E. Emery, veterans' coordinator at the University of Massachusetts, has released some figures showing the veterans' outstanding scholastic performance. I ask unanimous consent to have printed in the Appendix of the RECORD a news release from the University of Massachusetts for June 25, 1958, at the close of the last school year, giving statistics on the scholastic standings of veterans.

There being no objection, the news release was ordered to be printed in the RECORD, as follows:

AMHERST, MASS., June 25, 1958.—Veterans continue to show a high degree of scholastic achievement in the University of Massachusetts, a survey by George E. Emery, veterans' coordinator, shows.

With veterans accounting for 38 percent of the men graduating, 63 percent of honor graduates were veterans.

All three men receiving B.A. degrees magna cum laude in the College of Arts and Sciences were veterans. Of the nine men graduating cum laude, six were veterans. In the same college, of the four men receiving B.S. degrees, magna cum laude, one was a veteran. Of the four men graduating cum laude, three were veterans.

Two veterans received the highest honors granted in the College of Agriculture, both magna cum laude. Of the three men receiving cum laudes, one was a veteran.

Veterans took three of the six cum laude degrees granted to men in the School of Business Administration.

In the School of Engineering, a veteran earned the only cum laude degree in chemical engineering; all three magna cum laude electrical engineering degrees were earned by veterans and of the nine cum laude degrees granted in electrical engineering, six were earned by veterans. In mechanical engineering, the three magna cum laude degrees were earned by veterans and of the four cum laudes, three were veterans.

In the division of physical education, the two cum laude degrees were earned by veterans.

Of the 32 undergraduate men elected to the honor society, Phi Kappa Phi, 21 were veterans. Of the 11 men elected to Sigma Xi, honorary scientific society, seven were veterans.

Departmental honors were awarded to 14 men; of these 6 were veterans.

Somebody Needs To Care

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an address which I delivered at the annual convention of the National Farmers Union in Springfield, Ill., on March 17 of this year, entitled "Somebody Needs To Care" be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOMEBODY NEEDS TO CARE

(Address by Senator HUBERT H. HUMPHREY, Democrat of Minnesota, at annual convention of the National Farmers Union, Springfield, Ill., March 17, 1959)

It is an honor and a pleasure to be here in the Midwest today with you Farmers Union folk. I think that you all know that I consider the family farmers as the very bedrock of American democracy.

It is a special honor and pleasure to be on the platform with your president, Jim Patton. From where I sit in Washington, I have had ample opportunity to judge the effectiveness, or lack of effectiveness, of spokesmen for American agriculture. And I want you all to know that no witness who has appeared before us carries more weight and influence or has earned more respect than your Jim Patton.

Whether they agree or disagree with his views, no one in or out of Congress can successfully challenge the sincerity of Jim Patton's convictions, nor his dedication to his purpose of serving you and other family farmers of America. And, furthermore, his guidance and counsel have made a tremendous contribution toward sound liberal progress in our democracy.

And I could not pass this opportunity, today, to pay a deserved tribute to your Johnny Baker, your Washington "hired hand." Many of us on Capitol Hill depend upon John's wide range of knowledge and his sagacity. We know we can always depend upon his ready, willing, and able assistance when the need arises.

You do not need me to describe for you the tragedy that has fallen upon agriculture in these recent years. No one in all the world knows better than you do.

You have been there, where it happened.

No one foresaw more clearly and more sharply than you in the Farmers Union the consequences which have followed from the errors of the past 6 years.

You saw it coming. You saw it come. You have suffered under its blows.

You know more certainly than anyone else in the world that the farmers' incomes have eroded away steadily and dangerously, while the farmers' costs have climbed.

You know more surely than anyone that our farm programs have been wrecked, piece by piece, during these 6 years, until now the very concept of a national farm program has been made almost disreputable in the public mind.

The principle of a national farm program has been crushed under a burden of sense-

less, purposeless costs, by a record of clumsy, wrongminded administration. Because you have so nobly understood the purposes of the farm programs of the New Deal, you have been hurt more cruelly than anyone to see them wrecked—you have been hurt in your hearts, as well as in the material way that all farmers have been hurt.

You know also the bitter, shameful waste of our Nation's great opportunity to use its food for building peace which these past 6 years have brought. You have suffered in your souls to hear the denunciation of "burdensome surpluses;" it is an affront to the justified pride you take in the noble work of producing food. It is an affront to the compassion that decent people must feel for the hunger of millions and millions of human beings who do not have enough; it is a cruel rebuke to the dream you have, that you share with all men of good will on earth, that our generation might leave to our children a world of peace and progress and prosperity.

Why, we have not even had the imagination and compassion needed to feed our own hungry neighbors, right here in the richest country in all history.

There are little children so hungry they cannot keep up with their schoolwork literally within a stone's throw of the offices of the U.S. Department of Agriculture in Washington, where Ezra Taft Benson sits on top of a $9 billion mountain of surpluses. There are hundreds of children in the District of Columbia who suffer from a disease that the medical men call malnutrition, who cannot learn, who cannot grow properly, who cannot fight off the attacks of other diseases, because they do not get enough to eat.

You know, better than any expert in agricultural statistics can ever know, the dark despair of young couples on the farm who are laboring under the heavy burden of debt that beginning farmers so often face, as their incomes sink lower and lower and their costs rise up and up.

You know at firsthand how the farmer committee system has been demoralized and shattered.

You know that the Secretary of Agriculture has become the czar over the Rural Electrification Administration, that he has seized the authority of the Administrator of that program and invested it in an appointee who sits under his eyes and under his thumb.

I have reintroduced a bill that would give back to the administrator of REA the full authority and loanmaking powers he is supposed to have, and always did have before this administration took over. And, I promise you today, we are going to put the Humphrey-Price bill into law.

You know the wrongness and the injustice of the latest attack that has been leveled against the farmers' REA co-ops, in the form of a demand that they pay higher interest rates.

You may not fully realize how shockingly unjust and selfish it is, because the facts do not receive much publicity.

You may not know, for example, that since this tight-money high-interest-rate administration took power, its policies have resulted in a 62-percent gain in annual income for the people who receive interest. This is far, far greater than any gain in income received by any other group in our economy. It is a revealing contrast to what has happened to farmers' incomes.

The administration now says that the farmers should pay higher interest rates on their REA loans to help the Government carry the mounting costs of carrying the Government debt. They leave unsaid the fact that it is this administration's support for the moneylenders that is primarily responsible for boosting the cost of interest on the debt, until it has become the biggest single item in the Federal budget aside from defense. About 11 cents of every tax dollar now goes for interest.

Here is the full story of how much the American taxpayers have been burdened by the high-interest, tight-money policy of supporting the collectors of interest in our economy. In 1952, the interest on the Federal debt was only $5.8 billion. In the budget now before Congress it is $8.1 billion—and that probably will not be enough.

This is an increase of $2.3 billion in interest costs that the taxpayers must pay every year. Do you know how much $2.3 billion is? Well, here is one way of putting it: It is just about as much, every year, as the grand total that all the REA co-ops in the country have borrowed from the Government in all the 24 years since REA was created in 1935.

Now the White House is trying to put the bite on the farmers' co-ops to help balance its budget. After wrecking the Government farm programs, they want to handicap the farmers' self-help associations by making co-ops pay taxes on the refunds that they give to their patrons.

At least, we should not be surprised by this latest attack on the co-ops. The country had full advance warning when the Washington lobbyist for the co-op-hating NTEA was given a job on the President's White House staff. Yes, we saw it coming, and come it did.

If the administration were really sincere about wanting to balance the budget, it might take a look at some of the really big loopholes in the corporation tax laws instead of picking on the farmers.

An investment adviser told the Senate Antitrust and Monopoly Subcommittee last week that Uncle Sam has lost $46 billion in tax revenue in the past 7 years through loopholes in the corporation tax laws. Most of those loopholes were put there by the Republican 83d Congress, at the specific request of the Eisenhower administration. And they would have been even wider, if we had not fought to squeeze them shut in Congress, against fervent administration pressure.

Yes, you in the Farmers Union know about these things. You know the full measure of the injustice to farm families, the senseless waste of wealth and national opportunity, that the past 6 years have brought.

And it was very substantially because you know these things so well, you Democrats and Republicans alike in the Farmers Union, that my party received such an overwhelming mandate from the Farm Belt States in the congressional and senatorial elections last fall. I give a big share of the credit for the Democratic election victory to the leadership and the brilliant educational work of the Farmers Union in the farm communities of the West and Midwest.

The Democratic Party has received a powerful mandate from the farm people of America to oppose the tragic wrongs that have been done to American agriculture under the Eisenhower administration.

We must honor that mandate from farm people. We are determined to develop a new and better farm bill. We will need, and welcome, your help. We believe we can pass it and make it stick, veto or no veto. If we cannot make it stick the first time, we will pass another, and we will keep on until we do make it stick.

But it is only fair to warn you that the Democratic Congress is working under extremely serious and inescapable limitations. We cannot do everything you would wish we would do. We cannot do everything we want to do.

First, we are working under the limits imposed by the President's veto power. I think it is only fair and accurate to expect that the President will veto any bill we might pass which will do anything substantial to raise farm prices.

This means that Congress is limited in what it can do for farmers to what can be passed by a two-thirds vote, over a Presidential veto.

Secondly, Congress is limited in what it can do for farmers by the veto power by administration which is held by the Secretary of Agriculture.

You have seen how good farm programs can be ruined by unsympathetic administration. The power of the Secretary of Agriculture to negate the intent and spirit of Congress is great.

The Secretary's power to veto by administrative action limits the good that Congress can do for farmers to those things that are so simple, so direct, that the results can come through to the farm in spite of all the negativism, foot dragging and hostility that it will encounter as it passes through the Department of Agriculture's hands.

Despite these terribly severe handicaps, at least some of us in the Democratic Congress are determined to pass a bill that will help the farmers of America.

And you can mark it down as absolutely certain that the Democratic Congress will not let the administration pull down the temple of agricultural programs completely in its final hours, as it has proposed and wishes to do.

The Democratic Congress will never, never, never give Ezra Taft Benson the zero-parity floor he has asked for. We will not give him the marketplace no-parity gimmick he has asked for either.

The Democratic Congress will not yield even the next step of another 15 point cut in support floors, from 75 percent of parity down to 60 percent, that the Eisenhower administration has requested as its second-best objective.

The Democratic Congress will not allow the administration to get away with putting a penalty tax on the refunds that your cooperatives pay to their patrons.

The Democratic Congress will not let the administration jack up REA interest rates, nor throw the REA co-ops to the wolves of Wall Street.

You can count on that. You can bank on it. You can bet your economic lives on it—and that is exactly what the stakes are in agricultural policy today. For while the administration has a powerful veto weapon to use against Congress when it tries to help the farmer, we have a veto power of our own when it comes to acting on the administration's plans to harm the farmers. And we will use it. We will not give up a single inch.

This tragic era for agriculture—the dark era of Ezra—has had a good and constructive result along with all the misery and waste. So it seems to me, at any rate.

It has made us grow up and come of age in our thinking about farm policy.

We now realize that the real argument in farm policy should not be over methods and details. The real argument is over basic objectives.

Are you for a program to help the family farm? Or are you against the family farm? That, my friends, is the real issue, the real dividing line, in farm policy debate today.

Almost any farmer in America can think up the general outline of a farm plan that will work—if there is a will to make it work.

Methods are important. Details are important. Some will work better than others. Some well-intentioned ideas might not work at all. We need highly skilled technical experts and conscientious administration to carry out our farm programs. But our trouble is not for lack of ideas and conscientious, skilled people to put them into effect. The Department of Agriculture is

overflowing with fine, dedicated public servants—who could make a farm program work and work well, if they were given a chance.

What we lack in Washington today is a positive will to help the farmers.

There was a time not so long ago when we took it for franted that one of the bedrock principles of American life was the rightness of cooperation by the public to protect and improve farmers' incomes. Unhappily, this is not so today.

The most damaging product of the age of Ezra is the dangerous erosion of America's will to do justice for her farm people.

For the first time in the history of our Nation, a cancer of doubt has arisen in the public consciousness as to the merit of our family farming system.

The swift rise of vertical integration provides the mechanism whereby big concentrated business and financial interests can extend their domination over agriculture. This mechanism will leave the farm family on the farm. But it will take away its economic independence. The farmer will be told what to grow and where to sell, and the vertical integrator will control what the farmer gets for his efforts.

Let me read to you what the Department of Agriculture's experts foresee in this emerging new system of agricultural domination. This is from a report published recently by the Department:

"Vertical integration may vitally affect the role of the farmers. * * * Contract arrangements may leave producers with little more than general land management and caretaker functions. * * * Livestock production contracts vary from arrangements involving control of only a few decisions to contracts virtually relegating the producer to a piece-worker role."

This ominous forecast for American agriculture holds a powerful, fascinating allure for all too many people in our country today. Its allure has been heightened immeasurably by the discouraging, demoralizing shambles that the Eisenhower administration has made of our farm programs. There is a growing sentiment in our country for just giving up on the farm problem.

This sentiment is strong among those who do not understand the tremendous values and strengths in our family farming system, nor the unusual problems which farm families must face. There are millions and millions of citizens in our population who are far removed from the soil. Their number is increasing year by year. Domination of agriculture by centralized corporate power appeals to many of them as an easy way out of the farm problem.

And it appeals even more strongly to those who simply do not care about what happens to farm people.

The most serious problem farmers face is the growing strength of the public sentiment that either does not know, or does not care, about the value to our national life of preserving the independently owned, owner operated, family sized farm system of agriculture.

I would be less than honest with you if I did not admit that even in the Democratic Party, there are some who do not appreciate the value of preserving our family farm pattern against the growing domination of centralized economic interests.

The persistent discrediting of farm programs that has gone on during the past 6 years has resulted in some degree in discrediting farmers themselves by implication. Remember, farmers have had no one in the President's Cabinet to plead their case to the public. With no national voice to speak out in their behalf, it is becoming harder and harder to maintain a sympathetic understanding of the farmers' unusual economic problems among the increasing urban majority of our people.

There is no single thing more critically important to the future of the family farm than having a national spokesman in the national administration who can and will stick up for the farmers and explain their problems to the people.

Until 6 years ago, farmers had an understanding and loyal champion right in the White House. The world's most famous "retired farmer" of Independence, Mo., was then on the job. There is no better place to have a friend who understands your problems than right in the White House.

Not only farmers, but the entire Nation, need a man in the White House who has understanding of and sympathy for farmers.

The vast majority of people in the other countries of the world are farmers, and their problems, while different from ours, are important to all of us who look forward to a time of true peace in the world.

Today we realize more keenly than ever the need to find peaceful ways of reaching into the lives of other people.

I want to talk to you about the international situation as well as the domestic situation, for we face a grave challenge which can not be ignored.

That challenge can best be met by proving we really care about people, at home or abroad, and care about progress—and most of all about peace with justice.

Whenever we neglect our own people, we have little to offer to the rest of the world in asking vast millions to rally to our banner of freedom and democracy.

We must prove we care at home—and then prove we care also about our fellow human beings everywhere.

Last night, the President of the United States talked to his countrymen and to the world of this latest Soviet-precipitated crisis over Berlin. Even as we demonstrate to the world that we are utterly determined to resist Communist aggression, we must be alert to the opportunities to wage peace—consistently, vigorously, and dramatically.

We must constantly seek to express the American dedication to people, peace, and progress throughout the world—not only in the words of peace, but in the very deeds and works of peace.

You people here, and others like you throughout the country, are producers of what can be one of the greatest assets our country has in its all-out competition with Soviet Russia—a force for freedom and peace more far-reaching than any military weapon.

Food is the common denominator of international life. Man must eat to survive. It may well be that bread, not guns, will decide mankind's future destiny.

In areas of Africa and Asia, as well as other parts of the world, food means far more to vast millions of people today than anything else.

A breakthrough in the conquest of hunger could be more significant in the cold war than the conquest of outer space.

Thanks to you farm people, and others like you, the United States is today in a far better position than Russia to lead the world toward the conquest of hunger and want.

Our much-abused abundance is a tremendously vital asset to our international relations, if we have the vision and determination to use it wisely for humanity.

For years, as you know, I have been seeking to have America capitalize on what I regard as one of the most significant laws currently on our statute books.

I refer to the Agricultural Trade Development and Assistance Act—Public Law 480. Under this law, from the sale of American crops there becomes available to us for use in foreign countries for reloan and reinvestment hundreds of millions of dollars in the form of foreign counterpart currencies.

These currencies represent one of the great assets of the free world. No other nation has such a rich resource—well over $2½ billion of idle funds.

It is an asset which should be put to work, instead of lying fallow in State central banks.

It is an asset which should be used today—now—for investment and research instead of allowing inflation gradually to erode its purchasing power.

Out of my recent trip to Western Europe, I have developed a series of recommendations for expanding the specific use of such funds. My goal is to use food for peace, food to nourish, to link nations in friendship, food to fulfill the Biblical mandate, "to feed the hungry and heal the sick."

This leads me to my principal recommendation of this afternoon. Within a very brief time, I shall introduce in the U.S. Senate a Food for Peace Act. This act has already gained the support of other Democratic Senators who are in total agreement with me that our agricultural abundance should be used as a more effective arm of our international relations.

The Food for Peace Act will redirect the emphasis of Public Law 480 more toward foreign policy objectives which serve the interests of the entire Nation, rather than its present handling as a temporary farm surplus disposal program.

This will be a blueprint for a long-term food policy, to be substituted for our present year-to-year thinking and inadequate planning. By this act we shall announce boldly to the developing areas of the world that we are going to use food as a positive force in building a peaceful world.

Regrettably, the American people have been led to think our abundance and ability to produce in abundance is some shameful millstone around our necks—instead of perhaps one of the greatest advantages we hold on the world scene.

From the President on down, no one high in our Government has seemed to realize what a potential force for freedom we have in the very thing many have complained so loudly about—our food abundance.

Every move to make greater use of food and fiber to bolster ties with underdeveloped areas of the world has had to be forced upon this administration.

They are too timid, and too unimaginative. They are hesitant when they should be bold. They have once again sent recommendations to the Congress that are either impossible or almost intangible.

The Food for Peace Act will call for the creation of a special agency attached to the White House, headed by a Peace Food Administrator appointed by the President and confirmed by the Senate.

During the war, we created a new post of War Food Administrator, entirely independent of the Secretary of Agriculture, because we fully recognized the importance of food to victory. In our current struggle for a secure peace in the world, it it no less important to have in our Government a top-level official whose full responsibility shall be the more effective use of our abundance of food and fiber, in the Nation's interests, as a vital arm of our foreign policy.

The Peace Food Administrator should be someone with a vision of what our food can mean to the world, and someone with the ability and boldness to end buck-passing and conflict between the many agencies of Government involved one way or another in food use abroad.

We shall transfer the administration of Public Law 480 out of the Department of Agriculture and the administration of the appropriate part of the Mutual Security Act out of the State Department and place them under the new Peace Food Administrator, along with existing units in the departments working in this field.

A Peace Food Policy Committee whose members are high-level representatives of all the departments concerned shall advise and consult with the Peace Food Administrator.

In addition, the Administrator will have the benefit of the counsel of a special advisory committee made up of representatives of the major farm organizations, food and fiber exporters, representatives of the voluntary agencies such as CARE and church groups, and representatives of voluntary health groups.

Public Law 480 will be extended for 5 years, with an authorized program level of $10 billion for the 5-year period.

We shall tell the new nations that we are going to "back stop" them in their plans to industrialize, and to improve their economies by way of long-term loans for purchase of U.S. abundant foods. We are not going to stand idly by and watch them tighten their already pinched belts by cutting down on food imports at the time when they need still larger imports. We know that they are trying to conserve their limited amounts of capital in order to wisely and prudently expand their productive base.

We shall through the Peace Food Administration cooperate with other member-nations of the United Nations to establish national food reserves in food deficit areas, contributing specified amounts of existing CCC holdings.

Because most of the people of the world are hungry for fats, we will channel edible oils by donation into any of the international programs such as national food reserve, the United Nations Development Fund, or our own bilateral relief feeding programs.

We shall see that the foreign currencies resulting from title I sales shall be used to promote both vocational and general education in the countries concerned.

We shall see that such funds are used upon request to pay for increased FAO technical assistance in conducting nutrition research and surveys, and carrying on programs that feed the hungry, and in training local people needed to manage these programs.

Through the Peace Food Administration we can work out plans to support the FAO's projected Free the World From Hunger Campaign; to find the means to aid in overseas school lunch campaigns, summer camp programs, and milk feeding programs.

Through the Peace Food Administration we can move swiftly when famine or disaster strike, bringing aid to those sorely in need.

Through this projected agency, we can sit down together with representatives of other exporting nations and make sure that we are working toward the common good. We can work with representatives of those countries whose people are in need, and plan the best ways of supplying the need. If we can write mutual defense agreements with some 45 nations of the world to check military aggression, surely we can write mutual food agreements designed to check hunger and malnutrition.

I firmly believe that a Peace Food Administration operating for these purposes and along these general lines, would open new doors of opportunity for our own hard pressed farm people, and new doors of opportunity toward building a peaceful world.

It offers us a dramatic way to show the world we care more about people living, than people dying.

We need far less talk that portrays us as a bellicose and belligerent people, and much more emphasis on the works of peace—emphasis on programs and policies that are aimed at better living for people everywhere.

The world is weary of war, and threats of war.

The people of this world want someone to help them on the path of helping themselves, rather than someone to frighten them.

What the world needs is hope and promise, not fear and tragedy.

What the world needs is more leaders who really care about people.

Old Fighter Planes or Food?

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. PROXMIRE. Mr. President, the essence of the current foreign aid dispute between military aid and economic aid was brilliantly distilled recently by an editorial in the Milwaukee Journal entitled "Old Fighter Planes or Food?" I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OLD FIGHTER PLANES OR FOOD?

Haiti has been recently plagued by starvation. Inflation has all but wrecked its economy. Yet, according to Marquis Childs, when a recent visitor called on President Francois Duvalier to talk over the nation's problems he was greeted with the astonishing statement that the urgent need was for some modern fighter planes.

A nation deep in poverty and needing no more arms than necessary for internal security demanding modern fighter planes.

Yet this is an all too typical picture in many Latin American countries. Representative CHESTER BOWLES (Democrat, Conn.) has been making this point in a powerful series of speeches in Congress. He is arguing for an end to much military aid and a bolstering up of meaningful economic aid.

Military equipment, most of it obsolete to our own forces, is sent to many a country which can't afford to keep it in operation. Money is wasted that is badly needed to overcome poverty and bring economic development. The military equipment is in every way a burden on the people—and often a means of keeping them enslaved or threatening them with entanglement in war.

Haiti spends 20 percent of its budget on military and constabulary forces—much of it keeping up equipment we give to no real purpose. Brazil spends 29 percent; Chile, 24 percent; Paraguay, 28 percent; Peru, 20 percent; Colombia, 21 percent; Honduras, 18 percent.

The United States, of course, spends 50 percent of its budget on Defense Department military functions—57 percent if one includes atomic energy, defense stockpiling and military assistance. Under President Eisenhower's proposed budget for 1960, national security costs would take 59 percent of the budget.

The United States, however, is a rich nation. There is reason to believe that its deterrent force has, at least, helped keep the world from major war. Our Armed Forces have strength and purpose. Those of most small countries do not. And our forces, the UN and the Organization of American States (OAS) protect the Latin American nations from aggression.

The money used for unneeded military forces by Latin American nations, put into economic development and programs to feed and educate people, would go a long way toward making these nations modern and self-sufficient. Our military aid program invites them to saddle their people with wasteful and unneeded military burdens.

It ought to be reduced in most and cut out in many instances.

Atlantic City, the Gay Dowager

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. CASE of New Jersey. Mr. President, a few days ago Atlantic City, one of the finest resort communities in the Nation, prepared a special supplement for the New York Times outlining the many advantages and facilities of that great city.

I ask unanimous consent to have printed in the Appendix of the RECORD the lead article from this supplement, written by John T. Cunningham, of the staff of the Newark Evening News. This material is a chapter from Mr. Cunningham's book "The New Jersey Shore," recently published by Rutgers University Press.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GAY DOWAGER

(By John T. Cunningham)

(The following is a condensation of the chapter on Atlantic City from Mr. Cunningham's comprehensive and appealing book, "The New Jersey Shore," recently published by Rutgers University Press, New Brunswick, N.J. Mr. Cunningham, a native Jerseyite, is also author of a number of equally interesting and authoritative subjects on New Jersey.)

Imagine a city on a sandbar 4 miles at sea, where nothing can be grown and no fresh water is naturally available. Imagine skyscraper hotels built on sand, amusement piers jutting into the ocean nearly a half mile, boards spread over a million square feet to keep restless feet out of the sand—and all of these where there is no steel, no lumber, no clay. Imagine a city with 60,000 year-round residents in the most unlikely spot possible for a city.

That's Atlantic City.

Take this unlikely city and make it so elastic that it must absorb as many as a half million people every weekend in July or August—people who come or go unpredictably, and usually without advance notice, lured by hot sun or repelled by cool rain. The city must be prepared to feed, house, amuse, doctor and pamper these people on cue. Visitors expect sanitary and healthful beaches, so the waste of a half-million humans must be disposed of.

Enough of logic or illogic. Atlantic City for 75 years has been America's best-known resort. Today its millions of annual visitors come from far and wide; it is safe to say that practically everyone in the country has been in Atlantic City or knows personally someone who has been there.

Atlantic City's shimmering glory reaches its peak in July and August, as is the case with all resort towns, but its strength has been the ability to keep people coming around the calendar. A recent study by

the Federal Reserve Bank of Philadelphia disclosed a startling fact: 75 percent of Atlantic City's estimated annual $700 million to $800 million business is transacted in the off months, from September to June. That's contrary to all resort rules.

Atlantic City's off-season success lies largely in its ability to cater to the American propensity for birds of like feather to convention together. Sooner or later every organization chooses Atlantic City for its convention—one out of every five conventions held in America gathers on the Boardwalk.

Week in and week out they convene—doctors, lawyers, bankers, teachers, plumbers, industrialists, labor leaders, morticians, and a thousand and one other varieties of men and women who meet to exchange ideas and to hear of new developments. They come because the city's 300 to 400 hotels and motels can house them, because the city's 500 restaurants can feed them, and because the gigantic convention hall can accommodate more people than live permanently in Asbury Park and Long Branch put together.

Atlantic City supplies amusement to meet virtually any tourist or convention demand, tailored to fit virtually any wallet. A writer for the American Guide Series once summed it up about as well as can be done:

"Atlantic City is an amusement factory, operated on the straight line, mass production pattern. The belt is the Boardwalk along which each specialist adds his bit to assemble the finished product—the departing visitor—sated, tanned, and bedecked with souvenirs."

Two things—transportation and promotion—transformed Atlantic City from a barren island wasteland to what she is today.

First and foremost came transportation. A small band of enthusiasts built the first link, over the rivers and through the woods and across the bay, and on July 1, 1854, a Camden & Atlantic Railroad train rolled across the south Jersey flatland from Camden to Atlantic City in 2½ hours. Aboard rode 600 dignitaries, and, of course, the press. Never has the press been very far from Atlantic City's heart or mind.

Railroads brought weekending millions to Atlantic City faster than many of them could get to their jobs during the week. The city, led by its hotelkeepers, firmly decided that prosperity lay in spreading the magic name throughout the land—throughout the world, in case any Hindus or Egyptians or Mongols might be planning a world tour.

Promotion reached high peaks in Atlantic City long before the grandfathers of today's Madison Avenue hucksters even discovered the word "colossal." One bit of promotion caught hold and became a major tradition. Word of the centennial exposition in Philadelphia in 1876 caused some hustlers in Atlantic City to suggest an Easter parade in the resort town on Easter Sunday.

Not many arrived on the 1876 Easter special trains, but in 1896 nearly 40,000 folks strolled the Boardwalk to show their finery on a cool Easter Sunday. By leaving off their coats, though, "bright and chipper Easter girls and many fashionably attired young men * * * made themselves believe it was a balmy day." That could have been written about this year, or any of the years since 1896. The Easter parade, widely imitated, has never ceased to be an Atlantic City institution.

Atlantic City made the beautiful girl its symbol, and with its mimeograph machines created the legend that every American female is shaped in a mold marked 36-24-36, give or take a bit. Promoters have put as many young women as possible into bathing suits and paraded them before judges to prove the figures.

Miss America rules supreme as the queen of American beauty, just as she has ever since the first of her royal family was discovered in Atlantic City in 1921. She also rules supreme as the top American promotional device; she has been imitated everywhere. Today, of course, Miss America is chosen merely to prove that talent is not dead. The fact that the hotels and the boardwalk get an extra week's business is merely a pleasant coincidence.

Atlantic City has been called many things (with views of visiting journalists sometimes disagreeing with typewriters in the city's publicity office). However, ever since the old resort paused in 1954 to celebrate its hundredth anniversary, the term Gay Dowager creeps into an occasional official press release.

Gay Dowager—that's good. That's a way to say that practically nothing under the Atlantic City sun is new—but that an annual spring beauty treatment hides the wrinkles and the gray hair and makes the old girl as chipper as a youngster.

What really is new at Atlantic City?

The boardwalk? Not a bit of it—the present boardwalk dates from 1896, allowing for a widening to 60 feet in 1902 and for the annual $100,000 refurbishing. The present boardwalk is old, but at that is only the fifth in a line dating from 1870.

Atlantic City's rise dates from the first boardwalk, and to this day Atlantic City's charm centers around that wooden pathway. There is nothing like it on the face of the earth, and—even though shops may be featuring the latest fads and boardwalk theaters may be showing the latest Hollywood smashes—the boardwalk's appeals are old, old stuff.

The amusement piers have stretched out over the Atlantic Ocean since 1882; the newest of the lot came into being in 1913. None is as much a magnet as the Steel Pier, with its incredible variety of amusement, but that dates all the way back to 1898. Possibly no single amusement enterprise in any corner of the globe has been as widely advertised as the Steel Pier, probably no other single spot has featured as many different stars of show business.

For all the hotels and amusements and promotion, Atlantic City's real attraction is its beach which in its organization and its safety is one of the wonders of the modern resort world.

Each year as many as 10 million people go down to the sea at Atlantic City. Often 200,000 people—half the population of Newark—swim on a Saturday or a Sunday. Just the immensity of these masses would make it seem inevitable that a few would be lost, stomped down to the ocean's bottom to perish. That makes the record of the Atlantic City Beach Patrol far more than laudable; it's fantastic.

Records carefully kept by the Beach Patrol starting in 1913 show some astounding facts. Since 1913 the patrol has rescued nearly 65,000 persons, with an average of well under a single drowning per year—less than 1 drowning a year, out of 10 million people who enter the ocean.

No one knows for sure how many people have ridden out to Atlantic City by train or by wagon or by automobile since 1854. Surely the number from the time Absecon Boulevard was finished in 1919 approaches the half-billion mark. Probably a billion people is not too high a guess at the total of visitors over a full century of time.

Most would agree that these days Atlantic City is handsome and affable and charming—the year round. In November 20,000 to 30,000 New Jersey teachers crowd its hotels for their convention. In December the city and its neighbors sparkle with a splendorous Christmas glow. The New Year holiday attracts 50,000 or more people—a good mid-July crowd for most resorts. Huge crowds jam the Boardwalk when Washington's Birthday falls on a weekend. Easter Sunday finds the planks echoing to the tap of new high heels. Summer weekends bring pleasure-bent crowds.

All year long the show goes on—for conventions, for reunions, for holidays. Atlantic City stays alive. Regardless of varying opinions about the queen, she is remarkable. She loves people, she lives to welcome them, to entertain them, to send them home eager to return.

Atlantic City is exciting and warmhearted. She makes a man spend a bankroll without a murmur. She is nice to children, hints at excitement for their parents. She sparkles, she fascinates, she warms. You've got to like the "Gay Dowager"; she gives you a run for your money.

Cal Farley's Boys Ranch Has Helped Many Homeless Youngsters

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. YARBOROUGH. Mr. President, more than 1,500 homeless boys have found shelter and, more important, love and a sense of responsibility and belonging, at Cal Farley's Boys Ranch near Amarillo, Tex.

Mr. Farley has operated the Boys Ranch for 20 years and has helped a great many young men on their way to happy, productive lives. In a Nation with growing juvenile delinquency problems, Cal Farley's Ranch shows one way delinquency can be prevented.

Mr. President, the State of Texas and this Nation are much better places because of men like Cal Farley. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Delta Democrat-Times, as reprinted by the Amarillo (Tex.) Globe-Times for Thursday, April 16, 1959, under the heading "Cal Farley's Rule."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CAL FARLEY'S RULE

Cal Farley has operated a boys ranch at Amarillo, Tex., for 20 years. More than 1,500 homeless boys have found a home there and grown to manhood. So when Farley passes on some rules for rearing men, dads with just one or two boys might do well to pay attention. Farley says the rules are deceptively simple and therefore easy to overlook. He lists them as follows:

Teach the boy to obey. A boy's own rules turn out to be no rules at all. Take time to be a boy's companion. Be specific with the boy. Uncertainty in youth leaves the door open for lifelong doubt and conflict. Give the boy responsibility. Let him learn early how to be part of a team. Love the boy. Show him that love is a kind of mutual respect, reflecting itself in one's conduct. (The Delta Democrat-Times.)

The Negro and Desegregation

EXTENSION OF REMARKS
OF
HON. ALLEN J. ELLENDER
OF LOUISIANA
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. ELLENDER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Negro and Desegregation," published in the Anderson (S.C.) Herald of January 18, 1959. The Herald is South Carolina's leading Negro newspaper.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE NEGRO AND DESEGREGATION

The desegregation movement has shifted to Atlanta, Ga. This writer predicted in an editorial in the Telegram a year ago that the battle for integration for the rest of the South would be won or lost at Atlanta.

This Atlanta movement is not completely understandable to a Negro who thinks, and who wants to see his race advance on all fronts. Atlanta is the Negro capital of the world. There is no city anywhere in the world where Negroes own as much as those in Atlanta.

It is the Negro business, educational, and cultural center of the world. There is no other city that has six Negro colleges and universities. There are 228 Negro college instructors and professors employed by these 6 institutions.

It appears that the Negro leaders are a little off in their thinking. The State of Georgia would give those six schools of higher learning what ever millions they needed to make them second to none, and it appears to me that any sensible Negro would rather attend a school operated by his own race than he would one operated by others.

What will happen to these six colleges and universities if Negroes are admitted to the white colleges of the State? What will happen to these 238 instructors and professors under integration? What will happen to the other four Negro colleges in the State?

Someone has definitely sold the Negro leaders a bill of goods on integration to the extent that they are willing to sacrifice economic advantages for the mere privilege of associating with others on an equal basis. The unfortunate thing about this whole issue is that the masses of Negroes have had no opportunity to be heard. This integration movement is carried on by the so-called uppercrust Negro, the fortunate few, and they do not have the welfare of the masses of Negroes at heart.

These leaders who are fighting for desegregation, practice more segregation against their own people than they themselves are victims of at the hands of others. Not only are the unfortunate members of our race segregated by the so-called uppercrust Negro, but these well situated advocates of integration will not help the masses of our race although they are able to do so.

Ted Lewis is one of Atlanta's leading Negro businessmen. Some time ago he was having financial difficulty. He went to some of the city's leading Negro businessmen, including the bankers, and tried to borrow $2,500. They turned him down flat. He went to the small-loan department of the C and S Bank. One of the officials went over his plans with him, and then recommended that he borrow $5,000 instead of $2,500. The bank let him have the money without question. As the result he is a success today, a credit to Georgia and his race.

These big Negroes who are running roughshod over everyone in their fight for integration, won't help deserving members of their own race, and they are creating so much bitterness, hatred and prejudice, that before long these little Negroes won't be able to get the help in the future from white people that they have gotten in the past.

These advocates of desegregation want to force white people to desegregate, but they haven't desegregated within our race. In some sections of South Carolina the yellow Negroes won't have anything to do with the dark Negroes. I know Negroes in Charleston who will not speak to other Negroes because they are of different stations in life.

In some sections the yellow and mulatto Negroes have churches that dark Negroes cannot attend. Out from Bridgeton, New Jersey is a community known as Gouldtown. They are all white-looking Negroes, and will not accept a pastor sent by the Bishop unless he is near white.

The educated Negro shuns the uneducated of his race. The professional members of our race will rob and exploit the unfortunate members of our race. But they refuse to associate with them on an equal social basis.

When you know the facts about the so-called big Negroes, this fight for integration becomes a huge joke. At the rate that they are going, in a few years there will not be a Negro race. You can hardly conceive of sensible leaders advocating a movement that is going to do away with our race. But that is what they are doing.

There are no people who should be prouder of their race, and their heritage, than us. We should not suffer from a persecution or inferiority complex to the extent that we will go to court to convince others that we are their equal. You should feel that you are the equal of any man and demonstrate if by your character and deportment, and you will win the respect and admiration of others to the extent that you will not be regarded as a Negro, but as a man, an American.

I spent this weekend in Atlanta to get a firsthand report on reaction to recent Federal court decisions on buses and schools.

One Negro leader explained their fight for integration in the colleges in this manner. "If our youngsters go to their schools they will form friendships that will pay off in the future. When that white boy gets at the top in the business world," he said, "and an opening comes, he will reach back for his colored classmate. Many positions will be filled by Negroes because of the ties formed in college. These opportunities would come through no other manner," he concluded.

In other words, we want to ride to the top on the other fellow's coattail. We should seek job opportunity and advance on merit, ability and qualifications, and not because of our friendship with someone else. Be prepared and seek job opportunities on your own. Integration is not going to make up for the lack of preparation. Integration is not a cureall for our many problems.

Proposed Repeal of the Loyalty Oath

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent that there be printed in the Appendix an editorial from the St. Louis (Mo.) Post-Dispatch commenting upon the bill introduced by Senator CLARK and me to repeal the special oath and affidavit required under the National Defense Education Act.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR KENNEDY'S GOOD EXAMPLE

Senator KENNEDY of Massachusetts has declared himself in favor of repealing the special loyalty oath required of students who receive loans under the Defense Education Act. He has done so in recognition of the fact that there is a growing list of colleges that have declined to take funds under a law whose disclaimer affidavit amounts to a reflection on the patriotism of loyal students. We trust that Senators HENNINGS and SYMINGTON of Missouri both are opposed to the oath requirement and are sure that Senator DOUGLAS is also opposed. If enough Congressmen will declare themselves, the repeal of this offensive as well as ineffective throwback to the McCarthy era will take place almost automatically.

Inflation: What Businessmen Can Do About It

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Inflation: What Businessmen Can Do About It," delivered by Mr. James F. Oates, Jr., president of the Equitable Life Assurance Society of the United States.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INFLATION: WHAT BUSINESSMEN CAN DO ABOUT IT

(By James F. Oates, Jr.)

Next July the Equitable Life Assurance Society of the United States will celebrate its 100th anniversary, which qualifies it as a venerable institution. In comparison with the New York Chamber of Commerce, however, the Equitable appears as an upstart. The chamber had been functioning for 91 years when the Equitable was founded. Think of it.

The Equitable has long been a supporter of the chamber. Mr. Thomas I. Parkinson, whose portrait hangs on the front wall of this room was president of the Equitable for 26 years, from 1927 to 1953. He was very active in chamber affairs throughout most of that period, and from May 1934 to May 1936 served as president of both the chamber and the Equitable. Many of you will remember him as a pioneer and fearless crusader against inflationary policies when the Nation first started down that dangerous and uncharted road. I understand he does you and me the honor of being here today.

Today the Equitable has 18 officers who carry membership in the New York chamber. I am told that this exceeds the number of members affiliated with any other corporation in the city. Four Equitable officers have important assignments on working committees of the New York chamber, and three sit on committees of the national chamber.

Today all business and community leaders as well as all business associations face together a critical challenge to close ranks in the battle against inflation, to close ranks behind capable organizations like the New York chamber and the national chamber, which are in the forefront of the anti-inflation fight.

ILLUSIONS ABOUT INFLATION MUST BE CORRECTED

By and large the public knows little or nothing about the causes of inflation and too many of them think the consequences are desirable. Even among some businessmen and professional people, there exists an alarming state of ignorance and apathy as to its consequences and yet a rather fatalistic acceptance that continuing inflation is inevitable. As I see it, the battle against inflation must be waged on the educational front. We shall win the battle only when the mass of our voters come to understand at least the fundamentals of the causes and consequences of inflation.

The fear of inflation is an important factor behind the drop in the past few months in Government security prices and the subsequent record high levels in stock market prices. Recent stock market behavior points the wholesome lesson that prices will not inevitably and continuously rise. In recent weeks, however, price earnings ratios for common stocks have reached historic highs and prices of long-term U.S. Governments were near historic lows. This led one reputable financial newsletter to observe, after serious and deliberate reflection, that either we were in a new era and ought to recast our thinking accordingly, or we were not in a new era and should ponder more carefully the ominous significance of these historical facts and relationships.

FACT FINDING COMES FIRST

Obviously a great need exists for ascertaining, analyzing and interpreting the facts bearing on inflation. We in the business community have a great responsibility to the Nation at large to present and analyze these facts for the general public. This is, as I am sure you realize, easier said then done. Inflation is a mysterious phenomenon, both in its nature and in its source. The experts violently disagree. We must try to isolate and focus attention on the fundamentals.

We have a responsibility to clear up the misunderstanding which exists regarding the nature and extent of our recent price advances. We have a responsibility to give proper perspective to this price experience for purposes of assessing the current economic situation. We have a responsibility in educating the public to recognize the degree to which current inflationary pressures are within man's control. And we have a responsibility and opportunity to lead others to proceed vigorously toward removing those inflationary pressures that continue to plague us.

THE CONSUMER GOES ON A SPENDING SPREE

Let us look for a moment at the Consumer Price Index—the most comprehensive measure of goods and services that individuals buy. In the 1945–48 period, associated primarily with the immediate aftermath of war, and in 1950–52, a period that embraced a war, the Consumer Price Index rose by 5 percent or better per year. Since 1952, however, and despite a substantial price increase in the past 2 years, the price rise has averaged only one and one-half percent per year.

The price rise in the immediate postwar period, 1945–48, is, of course, explainable largely by the fact that the huge reserve of buying power built up during the war by business, banks and consumers was unleashed during a competitive scramble to acquire the still limited quantity of available civilian goods. This great demand for goods was intensified by the enormous pentup desires of the public—desires which were denied during 3½ years of war and the initial years of peace following the war. The price rise in the 1950–52 period is similarly attributable first to the buying spree at the start of the Korean war induced by memories of shortages and second to the subsequent large-scale increase in military spending.

The only other postwar period in which prices rose sharply was in 1955–58 when the Consumer Price Index registered a 3 percent per year increase. In 1955 we had the fantastic boom in consumer spending on housing and automobiles that was financed in part by a previously scheduled $5 billion tax cut and by an unprecedented expansion in consumer credit. In 1956 and 1957 record high investments in new plant and equipment were incurred as manufacturers strove to increase capacity to fulfill their revised estimates of current and future demand.

ADDITIONAL PRESSURES ON PRICES

In the past 12 months, a period first of sharply declining business activity and, later, of recent partial recovery, prices continued to rise. One of the principal reasons for such increase was the wage increases granted under new labor contracts or automatically under contracts negotiated in previous years. The impact of such long-term contracts can be sizable. Dr. Yale Brozen, University of Chicago economist, estimates "that 4.5 million workers will receive such wage increases in 1958; and many of them * * * in industries which at the time were facing severe unemployment—such as steel and railroads."

The Federal Reserve's reversal, in the autumn of 1957, of its tight money policy in order to increase the amount of credit available was another important factor in supporting prices. The impact of its various operations can best be measured by the change in the loan and investment accounts of the commercial banks and by the change in the free reserve position of the System's member banks. From the end of November 1957 to the end of July 1958, the loan and investment portfolios of commercial banks increased by $10 billion; during the same 8 months, member banks' free reserves (i.e., their excess reserves less borrowings) grew by almost a billion dollars and in the process changed from a net debt position to a status of substantial surplus.

INFLATIONARY BIAS ALLOWED TO CREEP IN

While the factors above-enumerated were of special import in explaining price changes in specific periods since World War II, other factors were imparting an inflationary bias to our economy throughout the entire postwar period.

First is the inflationary bias resulting from interpretation of the Employment Act of 1946 to mean that policies favoring maximum employment and production are to be given priority over price stability. I use the term "interpretation" advisedly because the wording in the act states clearly that, "It is the continuing policy and responsibility of the Federal Government to use all practicable means * * * to promote maximum employment, production, and purchasing power." This statutory language certainly implies that the maintenance of maximum purchasing power (i.e., price stability) is equal and coordinate in status with the other goals of maximum employment and production.

Dr. Edwin G. Nourse, former Chairman, Council of Economic Advisers, under the Truman administration, has publicly voiced the same viewpoint. He recently stated that: "The greatest threat to the accomplishments of the objectives of the Employment Act is to be found in the inflationary bias that we have allowed to creep in." Notice the use of the phrase "allowed to creep in." There is nothing in the act itself that requires or authorizes the Government to subordinate the objectives of maintaining price stability to the objective of maintaining "full" or "maximum employment." By permitting the currency to depreciate, the other objectives of the Employment Act are imperiled. If a proper and sustainable economic growth is to be attained, no single one of the triumvirate of objectives can be ignored or given less favored treatment.

The second major factor tending to give an inflationary bias in recent years is our entire political and economic environment. It is an environment which permits, indeed encourages, labor to seek wage increases in excess of productivity gains. It is an environment which acquiesces in the absorption by business of wage increases as added costs and their transference to the consuming public in the form of higher prices.

Finally, another very important inflationary force is the new peacetime high Federal spending program for fiscal year 1959 and its associated record peacetime Federal deficit. As you know, official Budget Bureau estimates place that deficit at slightly over $12 billion.

Because of present bond market conditions, current expectations seem to be that the bulk of that deficit will be financed by the sale of short-term Government securities. To the extent that such Treasury financing is done, not with the savings of nonbank investors, but with borrowings from the commercial banks, to that extent inflation will be encouraged.

SUBSTANTIAL INFLATION UNLIKELY—MILD INFLATION A POSSIBILITY

Now, in the light of these circumstances, what can we say about our past inflation? It is submitted that certain of the important inflationary pressures and conditions that have existed in the immediate past either do not exist at present or do not carry the same impact. For an obvious example, we do not now face an enormous pentup postwar demand for housing, automobiles and other consumer durables. These past demands have been satisfied. Current demands for such items are of much less size and intensity. The huge reserve of buying power built up during the war has been greatly reduced. Our tremendous output of goods and services during recent years has seen to that. The capacity presently available to meet an increased demand is also substantial. This is true, not only in terms of idle plant and equipment, but also in terms of idle manpower and idle natural resources.

With these specific inflationary pressures now removed or dampened considerably, sharp price rises of, say, 4 or 5 percent or more per year are most improbable. If people fear a sever inflation of this degree, their fears are groundless. There is nothing to suggest that we place a high degree of probability on such a rise occurring. It will not occur unless war comes again.

Let us consider the period since 1952. The easy consumer credit which figured importantly in the recent boom can hardly, at the present time, be made any easier. Further impact along these lines is bound to be much less in the future than in the past. Both widespread industry cost-cutting and large-scale business expenditures for modernizing plant and equipment have helped in recent months to increase productivity sharply and to enhance appreciably the economy's ability to supply in increasing amounts the goods and services the consumer will demand, as recovery moves ahead. Furthermore, the Federal Reserve has now abandoned its easy money policy and is more watchfully concerned with a policy of comfortable restraint towards the inflationary pressures that may develop.

With the upswing in the economy, the clamor for tax cuts has disappeared—despite earnest predictions made last spring and winter by many prominent persons that unless tax cuts were forthcoming quickly and in sizable amounts, the economy would rapidly go to pot. Well, the economy didn't go to pot and instead is displaying renewed vigor. The business recovery, now underway, will raise corporate profits and personal incomes. These will automatically increase tax contributions to the Treasury and thereby reduce the Federal deficit for fiscal 1959 by a few billions of dollars. Secretary of Treasury Anderson said recently that the recovery will not only replenish our revenues but will help us to reduce Government expenditures in some areas. The President's recent emphasis on economy measures is most significant and heartening.

Results of recent Treasury financing programs are, in some important respects, encouraging and may augur well for the future. Because of realistic pricing, nonbank subscribers are figuring more importantly than originally expected. This may then be evidence that satisfactory rates will increase substantially nonbank purchases of Treasury securities and will help to reduce the inflationary potential inherent in financing the Federal deficit through the commercial banks.

In the light of all these considerations the average price increase in the years immediately ahead is not likely to differ significantly from the 1½ percent per year experience recorded since 1952. I must say that within the present framework of fiscal responsibility and political-economic conditions such an average price rise is quite possible. Therefore, I repeat that future price increases of 4 or 5 percent per year are most unlikely while increases of 2 percent per year or less are a possibility.

INFLATION NEITHER DESIRABLE NOR ACCEPTABLE

Is such a so-called mild inflation desirable and therefore acceptable? Some people think so. They think that it is good or even essential for economic growth. These people overlook our historical record which indicates we have had economic growth when price levels were stable or falling.

Some like it for its exhilarating effects. In its early stages inflation produces, like an opiate, a sense of well-being and prosperity. They forget that, like an opiate, it requires increasingly large dosages to produce the same stimulation and after continued usage produces moral decay, social injustices, and eventually economic stagnation. Consequently, mild inflations are neither desirable nor acceptable as a way of life. When businessmen assume inflation in their planning they necessarily help to create it.

REJECTS IDEA OF INEVITABILITY

Others avoid the issue of desirability and acceptability and instead cry out, "What are we to do? Inflation is inevitable." I not only reject the assumption of desirability and acceptability, but also reject categorically the assumption of inevitability. I reject it on the grounds of general economic facts which indicate otherwise, and I also reject it on the grounds that much of our political-economic environment is capable of change and that we can change it. Many Americans were highly pleased to note that Mr. Julian Baird, Under Secretary of the Treasury, recently stated that inflation was not inevitable; that it was man-made and could be man-controlled.

Dr. Per Jacobsson, managing director of the International Monetary Fund, in a recent speech before the American Finance Association in New York, reported that in his travels throughout Europe he is repeatedly confronted with the question: "Will inflation be checked in America?" His reply is always "Yes," based upon his analysis of the economic facts and his interpretation of the Federal Reserve's willingness to fight inflation vigorously and early.

Dr. Jacobson gives the following reasons why he believes inflation will be checked in America:

1. American labor is tending to price itself out of both the domestic and world markets. This is reflected domestically by widespread installation of new labor-saving equipment and abroad by loss of export markets for many products. Nearly 4 million workers are still unemployed and the labor force increases by 800,000 annually.

2. There exists much excess idle plant capacity.

3. Many raw material substitutes are now available which compete with rubber, wool and cotton. Aluminum, for which we have great capacity, is replacing steel for many structural uses and is substituting for copper in parts of the electrical industry.

4. Amazing worldwide technological progress in agriculture confronts the United States with a long-term problem of surplus agricultural commodities. Europe now is practically self-sufficient in most agricultural products and, hence, U.S. export markets for agricultural commodities will be greatly impaired.

5. Industrial technology has progressed rapidly in Europe. Europeans have adopted American methods and with modern plants are now obtaining high productivity from their labor. This offers increasing competition in world markets for American manufactured goods.

6. Courageous action in early stages of the present recovery in the United States indicates the Federal Reserve's determination to keep inflation under control in this country.

In conclusion he said, "Let's hope that developments from here forward in America demonstrate that I have given my friends good advice."

I agree with Per Jacobsson that favorable conditions now exist for stalling or slowing down the price rise of recent years and I also agree that with wise and courageous action we can check inflation in America. The acceptance of the inevitability of a continued price rise is not an acknowledgment of economic determinism but merely a political judgment that the will to control it has disappeared.

NOW IS TIME TO STRIKE EFFECTIVELY AGAINST INFLATION

Now is the time to face up to the very essence of our democracy and to show the world that we do have the courage to govern ourselves wisely; that we do have a proper sense of values and are ready to decide what needs we shall give up to make other needs more secure; that we do possess capable reasoning powers and have the wit to think our problems through to an effective solution; and that we do have the self-discipline, ability, and courage to stand by our values and see our policies through whatever the personal cost.

Now is the time to destroy some of the illusions we have acquired, to destroy the belief that easy money which encourages excessive debt is sound, to destroy the illusion "that we can get more out of our economy than we put in." Instead we must develop higher levels of economic citizenship and still higher levels of public and private responsibility. We must display the moral stamina necessary to place long-run interests of our Nation ahead of individual personal desires.

Our Government sets the economic tone and climate for the country, and since the Federal deficit is the harbinger of an increased money supply and later inflationary pressure, the crux of the anti-inflation fight must be waged first at the Government level. Federal expenditures must be brought into an early balance with the level dictated by Federal receipts.

CONGRESS HAS POWER TO CONTROL INFLATION

Inflation control is within the power of the Congress and many of its Members know it. Congressman JOHN BYRNES, of Wisconsin, for example, told his fellow legislators not so long ago, "The situation we are facing today and the cause of it is no secret. A majority of the Congress has gone wild in authorizing and appropriating for new and increased expenditures. It is going to do you no good to blame the executive or anyone else. The executive cannot spend 1 cent that this Congress does not authorize and appropriate."

A few months ago, Representative CLARENCE CANNON, of Missouri, chairman, House Appropriations Committee, also in the same vein told his colleagues, "When you go home at the close of this session and your people complain about the high cost of living, do not pass the buck. Tell them the facts. Tell them the national debt is higher because you voted to make it higher. Tell them the dollar has gone down and the cost of groceries has gone up because you voted to depreciate the dollar and voted to raise prices."

We need, I insist, to recognize that the success of our efforts will depend primarily upon our success in convincing the Congress to set the proper tone and climate for the Nation's activities. We need to persuade the Congress to act so as to encourage respect for monetary stability. Such respect for the value of the dollar can best be encouraged, on the one hand, by a demonstration of fiscal integrity with either a check on Federal spending or increased taxation so as to achieve early restoration of a balanced budget and, on the other hand, by a national declaration of purpose with regard to the level of prices that could achieve a moral force equal and coordinate to that already attained with respect to the levels of production and employment. It is high time that we stop fencing with windmills and concentrate our attention on the political scene where the malignancy of inflation originates.

BUSINESSMEN SHOULD HELP CONGRESS

Let us, however, be fair enough to realize that Congress is subjected to a constant variety of pressures advanced by groups of citizens seeking to advance their own respective self-interests. I have often thought that the role of a Member of Congress is far from enviable. He is placed under continuous exhortation by articulate constituents and held accountable for Jovian wisdom on imponderable issues of the greatest complexity. Many of the issues respecting inflatfon and the causes are intricate, technical, and highly controversial. A Congressman cannot be expected to be expert in all fields. He needs help in understanding the issues. Can he be blamed for voting inflationary policies if all he hears week in and week out is special pleading by representatives of labor, agriculture, and yes, business?

I submit that criticism can fairly be leveled at business leaders who are informed of the facts but who have failed to exhaust all efforts to develop a general public understanding of the issues. We need to correct the faulty impression of some members of our society regarding the assumed inevitability, desirability, and acceptability of inflation.

NEED IS TO ORGANIZE ANTI-INFLATION FORCES

We need to formulate a national policy against inflation and to band together for concerted action. We need to line up solidly behind capable organizations such as the local and national chambers of commerce which are already active in the fight against inflation. Such organizations are well organ-

ized to lead the fight. Since they are already in existence nationally and locally in communities across the Nation, they are well suited to be one of the main rallying points for local, regional, and national forces interested in stemming inflation.

If we can all recognize even mild inflation for what it is—a symptom of failure—failure on our part to govern ourselves wisely, if we can all recognize that for the community as a whole there is no hedge against inflation, and, finally, if we can all recognize the price paid to avoid any inflation is much less than the price exacted by further inflation—then, and only then, shall we have laid the groundwork for a successful anti-inflation campaign.

To do this, we in industry, must give our chambers of commerce our fullest financial support. We need to develop our techniques for participating actively on both an individual and corporate basis and on all levels and in all phases of the anti-inflation fight. We need to organize to share our experiences in this matter and to discuss the best ways and means to carry the fight forward.

We in the Equitable are sincerely interested in pursuing this matter further. We are ready to cooperate, to our fullest extent, with the New York and national chambers in implementing and invigorating the anti-inflation forces of our country. May I hope that all of you will share these views and join hands in this great effort, upon the success of which the future of our Nation and the freedom of the Western World are so largely dependent.

The Life and Career of John Foster Dulles

EXTENSION OF REMARKS
OF
HON. PRESCOTT BUSH
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD sundry editorials from four Connecticut newspapers regarding the life and career of John Foster Dulles.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New Haven (Conn.) Register, May 25, 1959]

JOHN FOSTER DULLES

History and the passage of time will, of course, have to measure fully the contributions of our former Secretary of State John Foster Dulles.

Thus will be assessed, in the ultimate, the degree of his success or failure, and the degree of international greatness to be accorded him in years to come.

However, there is one thing which can be said of John Foster Dulles right now without fear of argument or contradiction.

If courage, and fortitude, ability to rise above the ills of the body, loyalty, patriotism, and persistence in the face of adversity are the ingredients which go into the making of a great man;

Then—John Foster Dulles is assured of recognition as a great man, both now and for all time.

John Foster Dulles served the United States as its Secretary of State in a time of ever-deepening crisis.

He faced each successive crisis, too, with a will to compromise, if fair compromise could be reached, yet never with a will to appease, backtrack, or surrender.

It was this facet of his character which earned him world respect, and free world recognition as the strongest bastion in its diplomatic defensive ring.

And because of this it is now being said, and will be said for some time, that to find a replacement of equal worth will be hard indeed.

In international diplomatic circles John Foster Dulles was not a man who was universally loved, or even universally admired.

He was too firm, too dedicated for that. A position built upon moral rectitude is not easy to combat—nor, in the case of allies, is it sometimes easy with which to work. But complete respect was always commanded by John Foster Dulles, whether from friends or from foes.

And despite the slanderous attacks of Communists in recent years and the at-home cries of "brinkmanship" there was never any question of his true generosity of view. The Japanese peace treaty, which was so personal an achievement for him, is a model of constructive aid to a one-time enemy. His grasp of a democratic Germany's needs was as sympathetic as his rejection of any totalitarian taint in German postwar attitudes. Wherever there was trouble during his stewardship, he represented the United States first but provided, secondly, a sensitive concern for the requirements of nations and peoples who were our allies.

John Foster Dulles has left us all an ineradicable memory of personal gallantry in his last illness—a heritage of unimpeachable faith in his conduct of American foreign affairs. He stood foursquare on that which he believed represented the right and the just.

The American people, we feel, will recognize in this memory and in this heritage a foundation upon which can be built for John Foster Dulles a monument as firm as his own granite spirit.

[From the Hartford (Conn.) Courant, May 25, 1959]

JOHN FOSTER DULLES

It was only a little more than a month ago, on April 15, that illness forced the indestructible John Foster Dulles to retire. Today he is dead. There can be but few on this side of the Iron Curtain who do not feel sorrow, an almost personal sense of loss, at his going.

One still sees him as a tall, ruddy-complexioned man with downturned corners of a mouth ever ready to smile, as sharp eyes peered through big, round glasses. It is ironical that he should die just now. His colleagues, the Foreign Ministers of East and West, are face to face in a meeting at Geneva he did much to prepare. With no discredit to the able Mr. Herter, who is only beginning to write his own record, the allies at Geneva seem almost rudderless without the veteran we instinctively think of still as Secretary of State.

It is curious, moreover, that a free world that not long ago disagreed violently with Mr. Dulles should now look upon him with warmth and affection. Something more than the tragedy of illness and death accounts for this. Is it because we have lost a towering figure in a confused and troubled world that often seems to be led by little men?

It is no exaggeration to say that, rightly or wrongly, Mr. Dulles incarnated the unpopularity that was often the lot of the United States during his 6 years in office. The Paris taxi driver, the German newspaperman, the British professor were as one in berating him. They saw him as the man most responsible for transforming a once-idealistic United States into an atom-happy colossus that counted its strength in destructive power alone, and was all but deaf and blind to the hopes and fears of new nations of wretched peoples struggling to be free. Indeed much of the non-Communist world saw in him the source of the bitter things revealed in "The Ugly American." Typical was the Indian diplomat who said, in that musically mispronounced English of his kind, "Thees Mr. Dulles of yours is the only bull I know who brings his own china shop weeth heem."

How accurate was this view of Mr. Dulles? For the truth we shall have to await another day. But it does little good now for those of us who feel we have lost a friend and champion to gloss over the criticisms only recently hurled at him.

There is in the record, for example, his famous statement endorsing the Portuguese claim to Goa in India. NATO bases or not, this as much as anything else burned into the soul of the Far East the certainty that we are now the imperialists to be hated. Before that there was the gospel of liberation, in origin largely a domestic political attack on the policy of containment. It came to an empty end when Hungary revolted, and we could not help. Then, through all the years, there ran the doctrine of massive retaliation. It was a threat that we would drop H-bombs on Moscow if the Communists launched another brushfire war anywhere. This was at the time a necessary warning. But it was also a threat that we would start World War III over some Quemoy.

Yes, these things are in the record. But let us not forget that there are also in the record such facts as that Mr. Dulles first came to Washington at the request of former Governor Dewey in 1944. His mission was to keep the Republican Party from killing the United Nations as it had killed the League of Nations in 1920. He succeeded.

Here indeed was a man whose life, apart from an often active private career in law, had been devoted to the growth of international law. As a young man he had assisted Woodrow Wilson at Versailles. Lately, under a Democratic as under a Republican administration, he worked, often through the churches, toward peace by means of international justice. Nor let us forget that it was his insight and moral toughness that put us unerringly on the side of right in the sudden shock of the Suez war of 1956.

Most of all Mr. Dulles will be remembered, no doubt, for what was attacked as brinksmanship. This was based on his startling words in an article about him in Life in January, 1956:

"Some say that we were brought to the verge of war. Of course we were brought to the verge of war. The ability to get to the verge without getting into the war is the necessary art. If you cannot master it, you inevitably get into war. If you try to run away from it, if you are scared to go to the brink, you are lost. We've had to look it square in the face—on the question of enlarging the Korean war, on the question of getting into the Indochina war, on the question of Formosa. We walked to the brink and we looked it in the face. We took strong action."

This was the heart of the Dulles foreign policy. The thesis was not diplomatically phrased. And, on the face of it, it does look like the policy of a warmonger. Did not Mr. Dulles in fact make military pacts with any and all who announced themselves as being against communism? Did he not do so even at a cost of propping up feudal regimes whose hungry, miserable, diseased, and ignorant people were in revolt against them? He did.

To see only this, though, is to miss the point. What Mr. Dulles meant by what was damned as brinksmanship was something far different. It was the passionate determination that neither we nor the world should

be condemned once more, through the tragedy of miscalculation by an aggressor, to suffer world war. John Foster Dulles knew well that World War I, which set the course for this whole unhappy century to date, was begun because Kaiser Wilhelm didn't even know whether Great Britan would come in against him once he started to march, let alone the United States. Mr. Dulles knew, too, that tragedy had followed tragedy, until it happened all over again in World War II. By 1939 Adolf Hitler, the megalomaniac, had written off not only France but also Britain. He was also sure that a fat United States was too selfishly materialistic to lift a finger to halt the triumph of the Nazi master race and its friends. So again the same fundamental misconception brought the world to Armageddon.

This was what John Foster Dulles was passionately determined to prevent, now that he was a chief actor on the stage. And it was given to him to act a larger role than is usual for a Secretary of State. By saying one should not be afraid to go to the brink he meant that we should make it clear beyond all doubt to the postwar dictator, whether named Stalin or Khrushchev, that we would fight again if the life of freedom were again challenged. This was the direct opposite of taking foolhardy risks of war. It was the voice of an insight sharp enough, and a resolution strong enough, to keep the peace.

It would be good if this voice might be heard again today, in Geneva and in the Kremlin, warning that if need be we would fight for freedom once again. Now that cannot be. But it might be that this fundamental Dulles' thesis, as put into effect day in and day out in those incredible years of flying trips around the world, is a vital element in the free world's strength still. Whatever the future may bring, in his lifetime it did keep the peace. Let that be his monument.

[From the Naugatuck (Conn.) Daily News, May 25, 1959]

JOHN FOSTER DULLES

We cannot here and now write the verdict of history on John Foster Dulles as Secretary of State.

But in our own time, with only the short perspective of his final tragic illness, we can recognize him as a valiant, dedicated, selfless diplomatic soldier who may literally have given his life in the service of his country.

He was a soldier who did not serve in vain. He personally, as perhaps no other single Secretary of State in history, gave free men a rocklike defense against the aggressive force of totalitarian tyranny.

In his 6 crowded years as President Eisenhower's foreign affairs chief, Dulles traveled a fantastic 560,000 miles, visiting again and again every sensitive corner of the globe. He elevated face-to-face diplomacy to levels never before imagined.

The President gave him an amazingly free hand in setting the course of American policy. He was the boss of the State Department, and in effect he took it with him wherever he went.

Dulles believed that to assert the free world's strength effectively against encroaching communism, it was necessary not only to hold a tight line but to take risks. By his own word, he did.

He was a tough negotiator, a fit adversary for the stubborn Russians and Red Chinese. He was willing to move to the edge of conflict to force his opponents to back down.

These tactics kept the Red tide in check. But they did not break the stalemate. And in consequence of that, Dulles was assailed in some quarters as too rigid, too unimaginative to lead the free nations to a lasting peace, free of cold war tensions.

Some of the militant phrases he used, like "massive retaliation," were criticized as either provocative or empty of meaning.

Yet the real meaning of Dulles was not what he said but what he did. Free men everywhere saw this the instant he was stricken and could no longer serve.

Many once skeptical Asians are glad today that Dulles held firm against Peiping when it pushed against the tiny but symbolic offshore Chinese islands of Quemoy and Matsu. They are coming to see the face of communism as he saw it.

The Europeans, who many times felt him inflexible in cold war dealings, were stunned when he was no longer there to stand firm. They were grateful for his sturdiness in Berlin, in the Lebanon-Jordan Middle East crisis, in the Trieste settlement that removed a sore spot for free Italy.

His 6 years at the core of trouble in one of the world's most troubled times were the crown of a life devoted to diplomacy and pointed toward the post of Secretary of State.

While 19 and still a junior at Princeton, Dulles went to his first world conference for Theodore Roosevelt. Diplomatic assignments came often thereafter. The greatest before the Eisenhower era was his brilliant supervising of the post-World War II Japanese peace treaty.

Historians will decide whether any man could have gone beyond holding the line and led us closer to lasting peace in this tense age. Whatever their judgment of this man, it will surely be said that he tried—tried to the limits of his ability and energy. The free world honors him in death (with new and greater appreciation of his sacrifices) for his tireless efforts to keep free men free and make them secure.

[From the Bridgeport (Conn.) Post, May 25, 1959]

A DEDICATED FIGHTER FOR PEACE

John Foster Dulles was a man of tremendous, dynamic energy, a person of positive action. In one of his addresses he wrote:

"Those who love and want peace must recognize that unless they exert themselves as vigorously for peace as they do for victory, and as vigorously for justice as they do for peace, they are not apt to have either peace or justice."

In his 6 years as Secretary of State he never failed to strive for such a great goal. He did not seek the impossible and he had always before him a cold, practical policy in dealing with the international intrigue of Communist politicians. More than any other leader of the free West, he knew the full scope of the imperialistic aims of the Kremlin, the brutal stubbornness of Russian leaders, and the deadlines of Communist power.

Throughout his service, dedicated to peace and justice, in what John Adams once called our country's most important post, Mr. Dulles demonstrated his insatiable zeal, tenacious courage, and firmness in all his defensive maneuvers, in the manner of his most illustrious predecessors.

It was because of the results he accomplished, and his unwavering dedication to fighting from strength, without concession or appeasement, that President Eisenhower repeatedly referred to the late Secretary as the greatest the Nation ever had. He had no magic formula, but as a great international lawyer, better equipped for the top diplomatic post than the majority of his predecessors, he was never unrealistic in the execution of U.S. policy.

His triumphs were notable, but he had alined against him many political foes, and it was only when cancer struck him that these political leaders had a good word to say for him. And when they realized that even while ill, or recovering from surgery, Mr. Dulles was working tirelessly for his country's interests, even his most severe critics rallied to him. While in the hospital, they have prayed for his recovery, recognizing at last that his service, his patriotism, and his knowledge of the tactics of the intransigent Communists were invaluable.

Historians will, of course, assess his record in what has been called the most difficult job in the world, and his charting of the course followed by the United States and our allies through one of the most hazardous periods in modern times.

How great a champion he was to our cause in this turbulent period may never be fully known. But one thing will always stand out in the years to come. He fought valiantly for peace virtually to the day of his death and he was in a large way responsible for what peace we are enjoying today.

Oregon's Scenic Seacoast and the Town of Yachats

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. NEUBERGER. Mr. President, this is the centennial year of Oregon's statehood, so all of us from Oregon are profoundly conscious of the scenic and historical legacy which our great State enjoys.

The June 1959 issue of the Ford Times has published an excellent article describing the history and attractions of the Oregon seacoast community of Yachats, in Lincoln County.

Author of the article is Comdr. Nelson H. Randall, USNR, retired, who presently lives in the Willamette Valley city of Corvallis, site of Oregon State College. The article is illustrated with vivid and striking color paintings of Yachats and the Oregon coast by Nelson Sandgren, likewise a resident of Corvallis, Oreg.

I am pleased that the Ford Times and other national periodicals are featuring the Oregon shoreline, Mr. President, because it is one of the loveliest seacoasts in the world. A photographer for Life magazine once told me that he had photographed every shoreline on earth, from the Antarctic all the way to the Northwest Passage, but that none had the variety and exquisite beauty of the seacoast of Oregon.

Mr. Nelson Sandgren, with his pictures, and Comdr. Nelson H. Randall, with his article, have done justice to a portion of that seacoast, and I ask unanimous consent that the article from the Ford Times for June, by Commander Randall, be printed in the Appendix of the RECORD. The title of the article is "No Yachts in Yachats." Ford Times is published by the Ford Motor Co.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NO YACHTS IN YACHATS

(By Nelson H. Randall)

On the Oregon coast there is a town named Yachats. That name aroused my in-

terest, conjuring up yachts with white sails dotting a harbor, similar to those I have seen on war-time weekends at Marblehead, Massachusetts, and I felt a nostalgic urge to find out what Yachats looked like.

Driving north from Florence along U.S. Highway 101, which climbs far up on the almost vertical cliffs, I was afforded a panorama of rolling surf on a long stretch of beach; the breakers spread out like white ruffles on a petticoat. Occasionally I could see whales spouting, many of them so close to shore it was possible to distinguish their arched backs as they sounded; and at one famous spot there were hundreds of sea lions crowding the rocks.

On rounding a curve about 3 miles south of Yachats my view was suddenly blocked by the steep and rocky side of Cape Perpetua, a historic landmark which was discovered by Captain James Cook in 1778. According to his journal, he so named it because it was sighted on St. Perpetua's Day, March 7. With its jagged rocks and twisted trees, Cape Perpetua has apparently taken a perpetual beating from storms and winds, but as I saw it in the bright sunlight, looming sharp against the sky, it appeared as a symbol of perpetuity and seemed well-named.

The highway skirts the base of the cape, and the town of Yachats, when first sighted about 2 miles farther on, appears as a cluster of low, light-colored buildings on a narrow stretch of flat land squeezed between mountains and ocean. Passing an intriguing log hotel at the mouth of the Yachats River, I followed the road signs to a State park perched on a rocky point.

A friendly fisherman genially answered some questions regarding the town. Yachats is probably one of the most universally mispronounced names. In the early records it was spelled "Ya-huts," the name of a small tribe of Alsea Indians. The present pronunciation is Yah'hots. It has been said that it means "at the foot of the mountain."

My friend hauled in his line from which dangled two fat sea perch, or pink tails, as he called them. Kelp fish, rock cod, and salmon are also caught from the rocks, and, except for the salmon, no license is required to fish here. In the sandy coves nearby there are frequent runs of sea smelt, which are caught by wading waist deep into the surf with large nets. "The smelt are running" is a signal for most of the population to start running also, with their smelt nets.

When the glowing disk of the sun dropped toward the horizon, I returned to the log hotel I had noticed as I came into town, and, with the rhythmic roll of the surf in the background, was soon lulled to sleep. Next morning everybody in Yachats seemed to be out digging for razor clams.

The razor clam is unique, because it has a digging device of its own at the end of the shell opposite the neck, and once it starts going down in the soft sand it takes some fast digging to catch it. The popularity of the sport was attested by the crowd on the beach that morning, armed with clam guns, as their special shovels are called, digging hurriedly where a clam sign appeared, or lying prone with one arm down a hole, trying to outrace the bivalve.

The best clamming is at low tide, preferably a minus one, when vast expanses of nearly level beach are exposed. This also makes it easy to walk around the outcroppings of rocks, highlighted by little sequin-like pools left in the hollows by the receding tide. In these pools I found light green sea anemones, which close over and swallow whatever falls into their maws, and many other forms of multicolored sea life. Clinging to the rocky sides of these marine gardens were masses of starfish, from the tiny baby ones to big fat grandparents, sea urchins covered with purple spines, and large clusters of mussels which the early Indians used for their main item of food. On the beach I found many perfect sand dollars, and a number of agates and jaspers. This area, I learned, is a mecca for agate hunters, although the best finds are made after a storm has washed away the sand from the pebble beds.

I left Yachats reluctantly, wondering where else I could find so many interesting features per square mile. On my way out of town I paused for a last look at the fishing fleet still hovering offshore. After all, those trollers were the nearest things to yachts that I had seen around Yachats.

New Novel by Gene Hendryx, of Alpine, Tex., Relating to Marines in Wartime

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. YARBOROUGH. Mr. President, when Gene Hendryx, of Alpine, Tex., writes about the U.S. Marine Corps, the writing has a ring of authenticity. Mr. Hendryx served as a marine in World War II, in campaigns such as the Solomon slands, Guam, and Iwo Jima. He was discharged with a total disability from diseases contracted in the Pacific. He disciplined himself for recovery. He is a fighter of peace now; a fighter for good government side by side with us in Texas.

Although busily engaged as general manager of radio station KVLF in Alpine, Gene Hendryx still found time to put his memories of marines in action into a novel entitled 'Semper Fi", which is soon to be published.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the San Angelo (Tex.) Standard-Times for Sunday, March 29, 1959, entitled "Gene Hendryx Novel Slated To Go to Press in Summer."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GENE HENDRYX NOVEL SLATED TO GO TO PRESS IN SUMMER

Gene Hendryx, prominent West Texas radio station owner and ex-Marine, joined the ranks of the Nation's novelists this week with announcement by Pageant Press of New York of a summer publication date for his first book, "Semper Fi!"

Hendryx's souvenirs from World War II campaigns in the Solomon Islands, Guam, and Iwo Jima included yellow jaundice, malaria, dengue fever and just about everything else the Pacific had to offer. He also brought back enough poignant memories to fill a book.

"Semper Fi!" is dedicated to men who died while serving with the Ninth Marines. The fictional character at the story's center is Ray Lang, a young football player from Hondo whose experiences in the Marine Corps roughly parallel Hendryx's own.

UVALDE NATIVE

Hendryx was reared in Uvalde, played football for the Uvalde Coyotes, and cut high school short to join the Marines. At war's end he was discharged with a total disability from diseases contracted in the Pacific.

After a long period of hospitalization he was able to finish high school at Uvalde and continue his convalescence while a student at Sul Ross State College in Alpine. He took a B.S. degree there in economics and an M.A. in Government.

While a student he also became interested in radio and held a part time job with the Alpine radio station. After graduation he became commercial manager of KIUN at Pecos and in 1954 became one of three founders and owners of KCMR at McCamey.

PUBLIC FIGURE

Hendryx had become general manager of KVLF in Alpine in 1950 and is now president, having bought controlling interest in 1956 after sale of the McCamey station.

Energetic in public affairs, Hendryx is president of Sul Ross Ex-Student Association, director of the Texas Association of Broadcasters, a former county chairman of the Democratic Party and a past president of the Alpine Chamber of Commerce. He is also Most Excellent High Priest of Royal Arch Masons, a Rotarian, Knight Templar and Shriner.

The father of sons aged 5 and 2, Hendryx is married to the former Lucille Kempen of Alpine.

"Semper Fi!" was written in spare hours, Hendryx says. "I've got a couple more novels I've been kicking around in my mind," he adds, "but I will probably never write them unless this first effort meets with some chance of success."

He says the book is written in rough and tumble Marine Corps language, pulling no punches. "However," he notes, "it is one of the few war books ever written that is not dominated by sex."

Judiciary Subcommittee Hearings on Insurance—The Insurance Editor of the U.S. Investor Comments Upon Current Hearings by Senate Subcommittee on Antitrust and Monopoly

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. O'MAHONEY. Mr. President, in the current issue of the U.S. Investor appeared an important article, written by Mr. Roger Kenney, insurance editor of that periodical. The comments upon the problem now under study are of such importance that I feel they should be incorporated in the RECORD, and I ask unanimous consent that the article be printed in the Appendix.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LESSONS FROM THAT SENATE SUBCOMMITTEE WARMUP SESSION ON RATES—INDUSTRY SHOULD NOT BE MISLED BY VAGUENESS OF DEPARTMENT OF JUSTICE TESTIMONY—SUBCOMMITTEE IS LAYING GROUNDWORK FOR BIGGER THINGS TO COME

(By Roger Kenney)

The shape of things to come on this question of rates, ratemaking, rate deviations, etc., was pretty well marked out in Washington on May 12 when the Senate Antitrust

Subcommittee, under the chairmanship of Senator O'MAHONEY, took it upon itself to secure the views of the Justice Department on what should be done to preserve competition and the public interest in this important sphere of property and casualty company operations. The witness on that occasion was Robert A. Bicks, Acting Assistant Attorney General in charge of the Antitrust Division, who very early in his testimony made the bold statement that a regular pattern of control has been established in nearly all the States with respect to both fire and casualty rates. With this as a precept, he suggested that the Senate subcommittee would do well to start with an inquiry into the functions of the rating bureaus for the purpose of ascertaining the extent of freedom to cut rates and alter coverage presently accorded fire and casualty insurers.

Keeping in mind that he was making this suggestion on the basis of investigations already made—and probably currently going on—by the Justice Department, it is rather significant that he pointed his remarks at the strict rating laws passed by so many States in the late 1940's. "The model bill," said he, "requires that every member or subscriber to a rating organization shall adhere to the filings made on its behalf by such organization, except that any such insurer may make written application to the commissioner for permission to file a deviation." Indicating that up to this point, the model law seemed to meet the requirements of Public Law 15 which stipulates that reasonable and fair competition shall be encouraged by the State laws and regulatory practices, he went on, however, to call attention to the fact that the would-be deviator must notify the rating organization, and the latter organization, in turn (with all the power that lies behind members acting in concert), is entitled to a hearing on the question whether the deviation shall be allowed. Not only that, but if the would-be deviator is fortunate enough to survive this ordeal, he receives approval of his proposed rate or deviation only for 1 year. Whereupon he must go through the entire process again, with all that implies in the way of a heavy time and expense-consuming process. As Mr. Bicks put it: "The upshot is that any insurer who wishes to compete ratewise may face real practical difficulties. Activities by insurers pressuring uniform rates could reach the point where they might constitute an act of boycott, coercion, or intimidation which are specifically prohibited under the McCarran Act (Public Law 15) and thus come directly within the realm of Federal jurisdiction."

"TOO VAGUE," WE DON'T THINK SO

The immediate reaction in the industry to Mr. Bicks' testimony was that it was "too vague"—that he was "content to talk in generalities on a subject which calls for specific treatment." For our own part, after carefully observing the operations of the Justice Department through the years, we are not ready to subscribe to this view. What you must remember is that the very nature of this Department's work calls for a closed-mouth attitude—even on the witness stand—so much so that we are surprised that under the relentless questioning of Donald P. McHugh, counsel for the Senate subcommittee, Mr. Bicks admitted that the Justice Department is reviewing the alleged harassing tactics which have been directed against the Insurance Company of North America to determine whether such actions constitute "boycott, coercion or intimidation" within the meaning of the McCarran Act.

JUSTICE DEPARTMENT VERY MUCH IN THE PICTURE

Taking this statement in connection with his previous remarks to the effect that the Justice Department's investigation had revealed that a "regular pattern of control (of rating bureaus) has been established in nearly all States," you have a strong hint that the Senate subcommittee is to have a good deal of support from the Justice Department in its investiagtion of what "makes" and "goes" in rating procedure in the fire and casualty field. And this is not necessarily a bad thing for the industry, since a whole lot needs to be done to clear the air on just how easy or how difficult it should be for independent companies to deviate or make independent filings.

INDEPENDENTS ARE WELL ORGANIZED

On this score, it is well to keep in mind that no longer are the independents in the fire and casualty industry a group of mavericks choosing to go their own way in a highly individual manner, but rather a well-organized and closely knit group under the forceful leadership of Vestal Lemon, general manager of the National Association of Independent Insurers. Lest you forget, it was the same Mr. Lemon who, during the meeting of his organization last November just prior to the convention of the National Association of Insurance Commissioners at New Orleans, enumerated certain developments and matters which call for sober reflection and critical analysis by those who, like his organization, stand unalterably for continued State regulation.

First and foremost on his list was the alleged attempt by powerful segments of the industry—aided and abetted in certain instances by regulatory authorities—to enact legislation which would force all independent companies into rating bureaus and at the same time bring about conditions making deviations and independent filings well nigh impossible. We dare say that Mr. Lemon will be called upon to expound before the Senate subcommittee on this very serious charge—and it certainly will make interesting listening not only for the subcommittee but the Justice Department as well.

The point to remember is that Mr. Lemon has placed certain State regulatory authorities in the same category with certain powerful segments of the industry and has thus laid the groundwork for the very kind of suit which Mr. Bicks seemed to be considering when, during his testimony of the past week, he remarked that State laws making bureau membership mandatory, like that of Texas, go a long way to prevent deviation and have the effect of discouraging deviation. Whether Mr. Lemon's testimony before the Senate subcommittee will trigger a suit by the Justice Department on the constitutionality of such laws is at least an interesting speculation.

Of course, the fact that even at this early date the name of the North America Companies has come in for special mention in connection with its difficulties in getting and holding deviations means that this situation is due for some very special attention by the Senate subcommittee. Indeed, we would not be at all surprised if there was some wholesale subpenaing of the files pertaining to the famous NYFIRO case in New York as well as other equally hard-fought legal battles between the bureau interests on the one side and the North America on the other in different parts of the country. And this could lead to quite a show—what with subpenas going out for the dominant figures on each side—a situation which should be welcomed by all concerned. At least, meeting before the Senate subcommittee isn't as expensive as meeting in court, as both adversaries will agree after what they have been through in the past few years. Not only that, but if anyone is looking for a forum to discuss what's right and what's wrong about rating procedures and practice, rating bureaus, etc., there is no better place than these Senate subcommittee hearings where not a word is dropped without its significance being carefully weighed in the light of possible revision of the McCarran Act.

M'HUGH'S VIEWS ON RATEMAKING

And don't think for a moment that the hearings in Washington will be confined to the question of the right to deviate—all-important though it be. If your memory is good, you will recall that in an address made recently by Donald P. McHugh, counsel for the Senate subcommittee, before zone 2 of the National Association of Insurance Commissioners at White Sulphur Springs, he gave ample evidence of having made a very thorough study of the entire rating machinery in the fire and casualty field, implying that not only had the industry become weighted down with bureaus and pools but the bureaus in turn had become so imbued with their own importance that they were making a needlessly complex task out of their allotted role in ratemaking. In fact, he went so far as to raise the question whether the bureau shouldn't be limited to gathering statistics on pure loss costs. To repeat his words:

"The argument that a bureau-made rate must embrace all components of the premium to deceptive. Stripped of this camouflage, the operations of the bureaus can be critically examined by the subcommittee on their merits. The basic issue is whether or not the type of open price competition commanded by the Sherman Act is suited to insurance in view of the possible effects, such as endangering solvency and driving the small companies out of business.

"The legislative history of Public Law 15 sheds little light upon the type of State rate regulation Congress deemed desirable. The House report decried compulsory bureau membership, urged independence of action, and proclaimed the congressional belief that competitive rates on a sound financial basis are in the public interest. But little can be gleaned of the congressional attitude toward the techniques of bureau ratemaking.

"If the rating bureaus are unable to justify the broad grant of power over rates they now possess, the subcommittee may wish to consider whether the public interest would be better served by a different system. Among the suggested possibilities is the system whereby each insurer sets its own rates but where all companies would belong to a statistical bureau. This agency would develop pure premium upon the combined loss experience of all carriers since practice has demonstrated that sound actuarial principles requires the pooling of experience. No company would be permitted to charge a rate less than this pure premium. Final rates would be calculated by each insurer loading the pure premium with the amount being necessary for overhead, including acquisition costs and profits. This would allow for competition on each element of the premium dollar except the amount allotted for losses.

"Many technical difficulties would still have to be solved under this proposed system. Some precedent already exists in the life insurance field for this approach to rate determination and regulation. In its brief in the SEUA case, the Department of Justice advanced this concept of ratemaking."

A CENSUS WILL BE TAKEN

You don't have to be much of a student of human nature to appreciate that with Mr. McHugh entertaining such thoughts as these, a census is likely to be taken of the bureaus, pools, associations, and the functions they perform for the industry and the public. If that happens, then indeed will some very revealing facts be produced. For instance, back in July 1956, the Casualty & Surety Journal (published by the Association of Casualty and Surety Com-

panies) devoted its entire issue to information about the major associations in the insurance industry—and in that issue it listed some 61 organizations with wide and varied functions, some important and some not so important. And be it noted that the editors made no pretense that the list was in any way complete, simply stating during the course of their introductory remarks: "There is confusion, even in well-informed insurance circles, about the objectives and responsibilities of the industry's multiplicity of organizations."

ONE HUNDRED AND THIRTY-THREE BUREAUS AND POOLS COSTING $72 MILLION

That, dear readers, is the understatement of our time. One of the great weaknesses of the fire and casualty industry has been that when a new problem arises seemingly demanding joint (we were going to say concerted but that is a bad word in Washington) action, a new organization or association has been formed. But no one in authority within the industry has ever taken unto himself the responsibility of weeding out those organizations which have outgrown their usefulness. As a consequence, the industry is weighted down today with bureaus, pools, and associations which, of course, must be supported, and thus, in some measure at least, are a burden upon the policy-buying public, to say nothing about the all-too-often forgotten men of the industry, the dear old stockholders.

It will come as a surprise to our readers to learn that only recently one of the top associations in the industry took upon itself the task of compiling an up-to-date list of bureaus, pools, etc., and their annual cost to the industry—coming up with the astounding information that there are now 133 bureaus, organizations, etc., costing about $72 million to support. Of this amount, $58 million went to support fire organizations and $14 million went for casualty organizations.

In any man's language, that's quite a load for the industry to carry in these days of streamlined competition in the mass market lines. And our guess is that before the Senate subcommittee hearings on rates are completed, much attention will be given to the question as to why this "New England attic" of the fire and casualty business hasn't been cleaned out—long since.

Legislation for the Refugee Year

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD a letter I have received from Clarence A. Leslie, secretary of the New York Conference of the Augustana Lutheran Church, commending the enactment of legislation establishing the Refugee Year.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NEW YORK CONFERENCE,
AUGUSTANA LUTHERAN CHURCH,
Clifton, N.J., May 6, 1959.

Senator WILLIAM LANGER,
Chairman, Committee on Immigration,
U.S. Senate, Washington, D.C.

HONORABLE SIR: At the convention of the New York Conference of the Augustana Evangelical Lutheran Church held in Jersey City, N.J., April 21–24, 1959, the following resolution was unanimously adopted:

"*Resolved*, That conference urge the President and Congress of the United States to support the Refugee Year—June 1959 to June 1960—by enacting permanent legislation granting permission for resettlement, and copies of this resolution to be forwarded to the appropriate Congressmen and congressional committee."

We are confident that this will receive your earnest consideration.

Sincerely yours,

CLARENCE A. LESLIE,
Secretary.

European Opposition to U.S. Merchant Marine Policies

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. MAGNUSON. Mr. President, as Senators may recall, certain European maritime nations are sending representatives here on June 8, to offer formal protests to our country's maritime policies in aid of the U.S. merchant marine.

We have been assured by the State Department, which is arranging the meeting, that it will be simply an official presentation of views on the part of the eight countries to be represented.

Apparently, this view of the purpose of the meeting is not shared by some of the visitors, if we may credit the news story which appeared on May 25 in the Baltimore Sun, under a London dateline, headed "British Minister Will Head Maritime Assault on District of Columbia." The article indicates that the formal exchange of views may be something other than formal.

So that there may be no misconception of what our European maritime friends have in mind for their coming visit, I ask unanimous consent that the article published in the Baltimore Sun be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BRITISH MINISTER WILL LEAD MARITIME ASSAULT ON DISTRICT OF COLUMBIA

(By Joseph R. L. Sterne)

LONDON, May 24.—Britain is sending a cabinet minister to Washington June 8 at the head of a delegation which will protest vehemently against American merchant shipping policies.

He is Harold Wilkinson, Minister of Transport and Civil Aviation, whose department has jurisdiction over maritime matters.

The decision to place the British delegation under a cabinet member underscores the importance Britain is attaching to the 10-nation conference.

WILL HIT EVIL POLICIES

Along with other traditional maritime powers, the British will seek to swing world opinion against the evils of American shipping policies.

In particular the attack will be launched against:

1. American encouragement of so-called flags of convenience or necessity fleets which have been built up in recent years by shipowners, mostly Americans and Greeks, who want to avoid high taxes.

2. American flag discrimination practices which direct that 50 percent of Government-owned and financed goods must be carried by American flag ships.

3. American subsidy policies which, in the British view, are going far beyond the point of equaling ship construction and operating cost in comparison with other established maritime nations.

NATIONS LISTED

Protests will be lodged by Britain, Belgium, Denmark, France, West Germany, Italy, the Netherlands, Norway and Sweden during the talks in Washington.

In the opinion of the British shipping industry, these policies could destroy the merchant fleets and hence a good part of the military and economic effectiveness of the major NATO countries.

Of the most immediate concern here is the rise of huge merchant fleets under the flags of Honduras, Panama, Liberia and a few other nations that offer tax advantages to shipowners.

Sir Nicholas Cayzer, president of the United Kingdom Chamber of Shipping, recently pointed out that in 1958 Liberia jumped ahead of the United States and Norway to take second place behind Britain in world listings of active merchant fleets.

He referred contempuously to Liberia as a nation which 10 years ago had on register only one ship of 1,000 tons.

British spokesmen concede that American shipowners have such high costs that resort to registration under such flags may, in fact, be a necessity as well as a convenience.

IDEA REPELLENT

But in the British view the idea of having shipowners register under the flag of another nation to avoid taxes is repellent.

British shippers would rather have the United States offer big tax allowances than engage in and encourage what is regarded as fraudulent subterfuge.

Second big target at the Washington conference will be the American 50 percent cargo rule.

Not only does this give American shipowners the right to carry one half of all Government owned and financed cargoes at rates well above those being charged on the world shipping markets, the British contend. It also gives the Americans leeway to undercut their competitors by offering extremely low rates on return journeys to the United States.

CONTRADICTORY OPINION

On the third point British opinion is somewhat contradictory.

Rather than have flags of convenience or necessity fleets and cargo discrimination, the British shipping industry would prefer the American Government to offer outright subsidies to its merchant marine.

New Bedford's Fishing Industry

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a series of articles by Mr. Brad Hathaway, of the New Bedford Standard-Times, concerning New Bedford's fishing industry. New Bedford is one of the Nation's old-

est seaports and it has long been a center of domestic fishing activity. It today ranks as one of the leading ports of the country. Both the city and the industry deserve our praise for the fine work which they have done. The industry today is one of the most important influences upon our economy in southeastern Massachusetts. Mr. Hathaway and the New Bedford Standard-Times have done a public service in bringing to the attention of the public these articles which describe the achievements of the New Bedford fishing fleet.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the New Bedford (Mass.) Standard-Times, May 19, 1959]

FISH FLEET MUST HAVE DOCK SPACE

(By Brad Hathaway)

New Bedford's multimillion-dollar fishing industry has outgrown its whaling era facilities here and is looking everywhere for help—before it is too late. Biggest problem facing the 180-vessel fleet is docking space, a problem that skippers and boat owners have become increasingly aware of over the years. Increased facilities must be provided soon or the brakes will be applied to the city's fastest growing industry. The New Bedford fishing industry and its allied industries employ more than 3,000 persons.

Value of seafood brought into this port alone last year was nearly $14 million.

MANY OTHER ASSETS

Add the market value of vessels in the fleet, value of machinery, equipment and trucks used in 18 fillet plants, unloading plants and trucking firms, the salaries and wages of those connected with the industry, the cost of fuel, food, and supplies necessary when each vessel makes a trip; the equipment in marine railway yards and in machine shops, and the figure climbs conservatively to more than $100 million.

U.S. Fish and Wildlife Service statistics show that just 26 years ago, in all of Bristol County, fish landings amounted to 17,152,311 pounds, valued at $591,561.

The statistics, hard to believe but a matter of record, show there were only 31 fishing vessels of over 5 net tons and two mackerel seiners working out of ports in this country. That was in 1933.

Ten years later, landings at New Bedford had risen to 62,163,708 pounds, valued at $5,979,888.

In 1958, there were 111,350,000 pounds of fish, sea scallops and industrial fish worth $13,790,500 landed here. And the number of vessels working out of this port is approximately 180.

LACK OF DOCKING FACILITIES

For the 180 vessels in the fleet which average about 70 feet in length, there are only 728 feet of public wharf in the city devoted exclusively to docking facilities. That is pier 3.

The rest of the vessels tie up alongside other city-owned piers used mainly for unloading purposes or at privately-owned wharves here and in Fairhaven.

The city owns Pier 4 and Homers Wharf. Fish unloading operations are conducted at these wharves. None of the city-owned piers have ever undergone major extensions to create additional facilities, although discussion along this line has been frequent.

Most of the time, two-thirds of the fleet is out fishing or undergoing repair at Fairhaven yards. The lack of docking facilities isn't felt as keenly then as it is when storms force the vessels into port and holidays mean homecoming.

AT MERCY OF WIND, WAVES

After gale warnings are hoisted, it isn't unusual to see seven or more vessels tied abreast to a wharf here to wait out the storm.

Then they're subject to wind and waves. More than once a boat has been torn away from the others, to go aground or smash against the Fairhaven-New Bedford Bridge. The loss sustained while the vessel is laid up to undergo repairs is enormous.

Docking congestion also poses a potential danger from fire and explosions.

Congestion means difficulties in icing down vessels and loading provisions aboard. A dragger or scalloper has to be shunted from dockside to another site so another vessel can tie up alongside a pier to take on supplies.

Most people don't know just how much one fishing vessel is worth to the city and allied industries.

BREAKDOWN OF EARNINGS

Look what happened to the $141,000 gross stock of a typical New Bedford scalloper last year. It was divided as follows: Wages $78,764, food $7,091, fuel $8,987, gear and supplies $4,822, ice $1,766, repairs $15,900, insurance $6,751, mortgage interest $2,900, provisions for Federal and State income taxes $2,112, scallop bags $812, water $105, Social Security taxes $2,418 and other miscellaneous items. Remember: There are 180 vessels in the fleet.

Fishermen say the port must have more unloading facilities to handle the fleet more efficiently.

They say this would attract new buyers and that more competition would help raise the prices they get for fish.

Some dealers and other waterfront personnel reply that unloading facilities are now taxed only when an abnormal number of vessels dock here with large catches.

They point to the many days when the catches of fewer than 10 vessels are sold in the auction room to the city's 5 buyers.

Many more vessels would have to work out of this port or a lot more fish would have to be caught to necessitate the construction of additional unloading facilities here, the dealers say.

That the need for more docking space is of primary and immediate importance is denied by few.

"Something should be done before it is too late," says S. P. Jason, secretary-treasurer and business agent of local 59, Teamsters' Union.

Mr. Jason is a longtime advocate of expanded waterfront facilities here. Truckers in his union transport the city's fish products all along the east coast.

City Councilor Joseph P. Boldiga, an official in the Ronny and Dannie Corp., fishbuying firm on Homers Wharf, says "The vessels need the space and need it bad."

"LOT OF WASTED SHORE SPACE"

"There is a lot of dissatisfaction with the present docking situation," reports John F. Linehan, general manager of New Bedford Seafood Producers Association, "and there is a lot of wasted shore space."

The need for additional facilities here has been outlined over the years by officials in the old Atlantic Fishermen's Union and the present 1,500-member New Bedford Fishermen's Association.

Waterfront interests say concerted effort and organization by all concerned are necessary to solve the problems.

"Come up with a united effort and half the battle's won," they say. "New Bedford (now ranked third in value of fish landings in the Nation) could be the top fishing port in the country."

[From New Bedford (Mass.) Standard-Times, May 20, 1959]

CITY WATERFRONT 50 YEARS BEHIND—POSSIBILITIES FOR EXPANDING FISHERIES DOCKS SUMMARIZED

(By Brad Hathaway)

In the face of New Bedford's shoreline is changed by construction of additional facilities here for the 180-vessel fishing fleet, it will be the first time in more than a half-century. The need for more docking space for the fleet is evident, but just where the space should be provided is undecided.

Foremost in the minds of many waterfront observers is the extension of city-owned Homers Wharf and the purchase and extension of a wharf owned by New Bedford Gas and Edison Light Co., now occupied by Acushnet Fish Corp.

This, they say, should be the first step in an overall program designed to make both sides of New Bedford Harbor a mecca for the growing fishing fleet, rather than a port of congestion.

Ideas of solving the problem come from fishermen, vessel captains and businessmen. Some ideas are old; some are new.

They involve the Fairhaven waterfront, Fish Island, Popes Island, property of the New Bedford, Woods Hole, Martha's Vineyard and Nantucket Steamship Authority, the State Pier, city-owned piers, land north of the Maritime Terminal and south of Greene and Wood Pier.

In the 1930s, piers 3 and 4 were extended to the west edge of the harbor channel in Public Works Administration projects. But the extensions amounted to only a few feet. No major pier facilities have been constructed here since the turn of the century.

Studies show that Homers Wharf can be extended 175 feet and that the gas company wharf could be lengthened 165 feet. The extensions would provide nearly 700 feet of additional docking space.

Mentioned in passing as docking and unloading site possibilities are the north side of Popes Island and the State pier.

The State pier also houses the U.S. Naval Reserve facility, which some feel could become a centralized housing unit for waterfront unions, the Seafood Producers Association, boat settlement houses, and others.

The U.S. Naval Reserve moves out late in June to new headquarters at Fort Rodman. The pier building, occuying 14,000 square feet and comprising some 23 rooms, will then be available for lease from the State.

Height of the State pier, however, has been termed a hindrance to the fleet and the conversion of the pier into a fishing fleet facility would mean the end of foreign and coastwise shipping into New Bedford.

There are some, including at least two members of the advisory committee to the New Bedford Harbor Development Commission who feel the city would have more to gain than to lose if the steamship authority took the island boat line out of New Bedford.

They say the waterfront space occupied by the authority could be put to more profitable use for the community by the fishing industry.

As for Fish Island, Mayor Lawler still has plans for its development as a Coast Guard base.

"I'm going to make a concerted effort to get a commitment from the Coast Guard on whether it would like to make use of Fish Island," the mayor said last week.

"The answer will let us know if Fish Island will be developed as a Coast Guard base or whether we should turn another way and see if it is feasible to convert it into use by the fishing industry."

Fairhaven's waterfront, from the site of Mullins Freezer, north to the Fairhaven-New Bedford Bridge, also has been pointed out

as a possible area of development for fishing vessel berthing sites.

Some have suggested that a bulkhead causeway be constructed from Marine Park to Crow Island, with possible finger piers jutting toward the Fairhaven shore.

WOULD USE FILL

A project north of the city's maritime terminal whereby fill from dredging could be used to extend the shoreline, providing land for unloading sites in the future, also is suggested by some fishing industry personnel.

One drawback to this location north of Fairhaven-New Bedford Bridge is that every time a vessel heads north, the bridge span must be opened.

Some say that hours for the opening of the span could be set up so the inconvenience to motorists would be minor. Others point out that Route 95E crossing the river farther to the north, will funnel off a lot of traffic which now moves on Route 6.

Another site location proposed by fishing industry leaders is south of Greene and Wood Pier, occupied by Ell Vee Dee, Inc.

However, extensive and expensive dredging operations would have to be conducted here for suitable depth.

FIND ROCKBOTTOM

In May 1944, probings made by Army engineers of the U.S. Engineers Office in Providence showed that the harbor bottom off the Blackmer Street area is of solid rock, with varying degrees of mud and gravel atop the rock bed.

At one spot there was only 6.6 feet of mud and water to the rock at mean low tide.

At that time Army engineers said they believed the rock bed would interfere with a proposal to construct a 500-foot long, 150-foot wide pier for the fishing industry. The proposal was dropped and nothing new was done.

[From New Bedford (Mass.) Standard-Times, May 21, 1959]

DRIVE FOR FISH FACILITIES IS GAINING

(By Brad Hathaway)

The drive to increase facilities here for the fishing fleet is gaining momentum. Various study groups and committees are giving serious consideration to solutions. "We've needed additional docking facilities here for a long, long time," said Mayor Lawler. "And any project undertaken is going to cost man-sized money." Just how much it will cost to extend facilities here is not known: Hundreds of thousands of dollars, perhaps millions.

Plans to extend Homers Wharf, with the State sharing 50 percent of the cost, already are being drawn. Mayor Lawler, going ahead with a suggestion by the Harbor Development Commission, is also having a marine engineer survey the entire harbor.

URGES LONG-RANGE PLANS

John F. Linehan, general manager of New Bedford Seafood Producers Association, says, "I believe a long-range program encompassing the entire harbor should be drawn up.

"Such an expansion program could be in the form of a 20-year plan. Any work done is going to be expensive. But, there are some things which could be done immediately to fit into the overall plan—such as the proposed extension of Homers Wharf."

Continuing with his discussion of industry needs, Mr. Linehan said, "The Coast Guard should very definitely be a part of this overall picture.

"We owe it to the Coast Guard to provide its vessels with good docking and operational facilities here. The value of the Coast Guard to Greater New Bedford is no less than the value of any industry or business bringing money and people into the area from outside the State."

The group that has been working the longest on docking problems is the Fairhaven Planning Board.

Although its present plans deal only with the Fairhaven shoreline, the board has said it would like to confer with the New Bedford Harbor Development Commission and to have the town included in any overall harbor program.

COMMISSION AT WORK

The Waterfront Development Commission of the Fairhaven board, under Chairman Earl Holden, has been working for several months on proposed improvements to the Fairhaven side of the harbor.

Its plans include the widening and extension of piers in the town and the dredging and developing of the shore in an area from about the foot of Union Street to the bridge.

Preliminary plans call for a harbor of refuge some 15 feet deep between Crow Island, Marine Park and the Fairhaven shore. New shoreline facilities would add a mile of berthing space to the present docking space in town.

Town businessmen are now being queried on their ideas for expansion.

A New Bedford fisherman who has devoted much of his time in the last few months to studying the needs of the industry and possibilities for expansion feels that a fish pier, similar to those in Boston and Gloucester, is an answer to the problem.

SPOKESMAN FOR INDUSTRY

He is Ralph P. M. Raabe of 252 Shaw Street, a member of the New Bedford Fishermen's Association and designated a spokesman for the union in discussing fishing industry needs.

Study committees have been set up by the Industrial Foundation and the Seafood Producers Association. The advisory board of the HDC is also vitally interested in the needs of the industry and has called a meeting with waterfront personnel for 7:30 tonight in city hall to become better acquainted with the situation.

The most important body studying the problem is the Harbor Development Commission. It will be that group which will finally decide when, where, and what will be constructed here to serve the industry better.

The commission already has recommended the harbor survey.

Some waterfront personnel feel the commission has been slow to act on many problems facing the fishing industry, despite the recommendation.

They feel the commission membership is inadequate and is not working in the best interests of the industry. They said some of the men are not familiar enough with the fishing industry to know what is going on.

"The commission is a new organization and still feeling its way around," said Mr. Linehan. "Eventually, members will pave the way to a solution to the problems. Just give them a chance."

Attorney Louis Stone, chairman of the commission, said this week, "We are exploring other means to acquire additional docking space here. This is still in the embryonic stage and can't be made public at the present time.

"We know that added facilities here are needed immediately. We are continually working on the problem."

The extension of Homers Wharf is being sought by Mayor Lawler through the State Department of Public Works.

"This will be just a start," the mayor said. "Now we hope to get an overall plan and then will do what we can to implement the plan over a period of time.

"I hope the State sees eye to eye with us and will participate in the program."

COMMON EFFORT NEEDED

The need for the various study committees to joint together in a common effort, to pool resources and to advance their ideas based on knowledge of fishing industry needs, is of primary importance now, and for at least three good reasons:

Dollars and jobs are being lost to the community because of a lack of facilities to handle fishing vessels which would otherwise operate out of this port.

Competitive ports, eager to attract some of the business New Bedford now has, are spending more time and money to improve their facilities.

By neglecting port improvement, New Bedford jeopardizes its chances of getting a fair share of future business which may develop within the fishing industry or affiliated industries on the northeast coast.

Whatever is going to be done—and something must be, if the industry is to remain economically healthy—will take time, and it should be started without further delay.

Hot Rod Club: Antidote to Delinquency

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. WILEY. Mr. President, the Nation today is faced with a serious problem of delinquency among our youth.

Daily, the newspapers carry stories of the activities of young folks, for a variety of motives, which are outside the accepted modes of conduct in our society and which, regrettably, sometimes involve not only delinquency but crime.

I am, therefore, always particularly pleased to find constructive efforts in communities to provide leadership, guidance, and counseling—and above all understanding—of the problems of youth, coupled with realistic efforts to channel their almost limitless reservoirs of energy, ingenuity, imagination, and capability into useful activities.

As a splendid example, a recent edition of the Milwaukee Journal carried an article by Laura Pilarski, reviewing the activities of the hot rod club in Whitefish Bay, Wis. Composed of youths from 16 to 19, the Vagabonds, with guidance and assistance from the local police department, are making constructive contributions to improve safety in the community.

For example, in conjunction with the Whitefish Bay Police Department—a supporter of the club—the hot rodders recently assisted in spot checking for safety some 2,000 cars passing through the area. They gave after school hours for this project. In addition to imbuing these youth with a greater sense of road safety, the club membership is providing them with a knowledge of mechanics, group organization and cooperation, and respect for—and efforts to cooperate with—local law-enforcement officers. Of special significance is the fact that these hot rodders have a strict code within their own club to encourage the observance of traffic safety and good rules of conduct for the highways.

Currently, various Senate Subcommittees on Juvenile Delinquency have either

already held, or are holding, hearings considering numerous pieces of legislation in order to cope with the nationwide problem of delinquency among our youth. These bills cover a wide variety of subjects, including the problem of drug addiction, distribution of indecent publications, providing assistance to the States and institutions of higher learning for the treatment and rehabilitation of juvenile delinquents, and other approaches to the problems.

Believing, however, that one of the most effective efforts to combat delinquency is programing in the local community—such as illustrated by the cooperation between the Whitefish Bay Hot Rod Club and the local police department.

I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Laura Pilarski, and published in the Milwaukee Journal on May 23, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEENAGERS AND DRIVING—THIS HOTROD CLUB HAS POLICE SUPPORT—WHITEFISH BAY YOUTHS SPOT CHECK 2,000 AUTOMOBILES TO AID SAFETY CAMPAIGN

(By Laura Pilarski)

Every other Sunday, teenage boys collect in the council chambers of the Whitefish Bay village hall for some serious talk about automobiles.

They range in age from 16 to 19. They wear black poplin jackets with a covered wagon symbol and the word "Vagabonds" on them.

The group, now 3 years old, is a hotrod club. The covered wagon stands for its goal of rolling along. Wanderlust also is reflected in the club's name.

Parliamentarian discussion about cars is but one phase of the club program. Members customize their own models, rebuild engines for drag racing and offer help to the Whitefish Bay police department in safety campaigns.

CLUB SELLS BROOMS

They also sell brooms. This project is undertaken annually in cooperation with the Sertoma club, a service club which assists the hotrodders. This sweepstakes event will be held Tuesday, Wednesday, and Thursday. Proceeds will help the club.

In conjunction with the police department, another booster of the club, the hotrodders recently have spot checked for safety some 2,000 cars passing through the Bay area. They gave afterschool hours to this project.

Police Chief Orval Meister of Whitefish Bay told how appreciative he was for the service of Vagabonds. He mentioned that last year club members undertook a hubcap marking program at service stations as part of a campaign against hubcap thefts.

CITES GROUP SPIRIT

Members credit their adviser, Lt. Alex Boeder, of the Whitefish Bay police force, for much of their success and enthusiasm. One hotrodder characterized him as "a real great guy."

Lieutenant Boeder said the club was developing a terrific group spirit and promising talent in mechanics. He described his role as rounding up people and events to fill the bill the club outlines. He pointed out that the group functioned under very stringent rules.

The club president, Dennis Lambrecht, 17, of 4619 North 8th Street, Glendale, agreed the constitution was tough. Its provisions bar any boy who is failing in school.

CAN BE EXPELLED

The rules require that a member be suspended for a first traffic violation and expelled for a second one. They also detail a compulsory schedule of individual car checks for members.

Lambrecht, a junior at Nicolet High School, said he shared the family car with his father. He jointed the club, he said, because he always has been interested in cars and engines.

He listed present membership as 15 actives. He said that driving safety and a healthy respect for cars were their main concerns.

"It makes you mad to see young drivers who have no respect for the machine they're responsible for," Lambrecht commented. "It's like using a good golf club to hit a stone."

"Tiny," the club's vice president, said a car was a complicated piece of equipment and worthy of good care.

GOOD AS MECHANIC

Tiny, who stands 6 feet 6, is Dennis Krueger, a senior at Whitefish Bay High School. He is 17 and lives at 5036 North Ardmore Avenue.

He owns a 1957 Ford convertible which he described as an early graduation gift. He knows enough about mechanics to put in a new car transmission for a friend.

Larry Sacks, 18, of 4911 North Diversey Boulevard, a club member 1½ years, told how the Vagabonds stressed safety and gave boys a chance to learn about automotive mechanics. He is an engineering student, a freshman, at Marquette University.

RULES ARE EMPHASIZED

Larry displayed a pamphlet which the Vagabonds have distributed during public safety check duties. It was prepared by the club and emphasizes these rules:

Have your car safety checked regularly.
Slow down and live.
Think ahead, look ahead.
Observe all rules of road courtesy.

In hot rod lingo, these rules mean the Vagabonds are against "squirrels," "shot rodders," and "cowboys." All these terms, the members said, refer to the driver who is reckless, a showoff, and impairs the safety of others.

We Can Lose the Cold War on the Educational Front

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. SPARKMAN. Mr. President, recently Dr. Frank C. Laubach, who has spent much time in the Far East and Southeast Asia, talked to a few of us around the luncheon table about some of the problems as he saw them in that part of the world. At the time I asked him if he would not reduce his thoughts to writing. This he has done.

The paper by Dr. Laubach is thought provoking. I believe that everyone can well read it with interest.

Accordingly, Mr. President, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

WE CAN LOSE THE COLD WAR ON THE EDUCATIONAL FRONT

(Dr. Frank C. Laubach)

On January 14, 1959, Secretary of State Dulles, speaking before the Senate Foreign Relations Committee, described our entire foreign policy. His statement was clear; it was comprehensive. But he omitted one objective, because we have omitted it from our Government program. We are not trying to lift a billion people in the free world out of illiteracy. We are offering economic and technical aid; but as yet we are blind to the fact that illiteracy is a sound barrier preventing that billion people from rising in the economic and cultural scale. Illiterates everywhere have little or no money—little or no decent living standards; these things require a certain level of knowledge. Illiteracy and poverty go together; one is the cause of the other.

There is more illiteracy, and more hunger, in the underdeveloped countries of the free world than there was 30 years ago. This is because miraculous health and sanitation progress has sent the world population zooming faster than people have been taught to read, and faster than food has been produced to feed them. In America, where mechanized scientific agriculture produces far more food than we can consume, we are as yet unaware of the consequences of the rising illiteracy and the increasing hunger on the other side of the free world. The chasm widens every day. The rich grow richer—the hungry grow hungrier.

We have been blind to this stupendous gap in our world program because Americans have had so little contact with that illiterate horde. In Asia and Africa there is no middle class like that which includes the majority of us in America. The rich one-tenth at their top are highly educated, make the laws to suit themselves, control the armies, run the governments, mint and own the money, own all the land. Those are the people with whom Americans have come into contact. The nine-tenths at the bottom are the have-nots. They are wholly illiterate, build their own houses, and live almost wholly without money. When we Americans travel abroad, we see these illiterates only from a distance; we tell one another that they do not really matter, for they are helpless. We may feel a twinge of pity as we pass them at a distance, but they do not bothers our conscience for long.

Yet these billion underprivileged people will probably decide the future of the world. They have changed from a state of helpless despair to grim and ever-growing determination to come up out of their deep poverty and ignorance. This is because many factors have played on them during this century to stir up their longings. Missionaries gave them a gospel of hope. They saw our soldiers during the Second World War—they saw our business men, our tourists—they saw the food they ate—they saw their clothes, the houses our people lived in, the autos we traveled in. They heard echoes of Woodrow Wilson's 14 points, and they heard something about the Four Freedoms. We stirred those people more than they had ever been stirred in all the ages past.

The hungry multitudes concluded that we have so much while they have nothing, because we have secrets in books and magazines and we use those secrets to forge ahead. In this, they are absolutely right. Knowledge is the secret of our power; the illiterates want that knowledge. They want to read, and they want the books which will reveal the secrets of progress.

But we have done little or nothing as a government to meet their passion for literacy and for books. We still coast along on the fatal illusion that those people do not matter. Meanwhile, the Communists have infiltrated among them, telling the nine-

tenths at the bottom that all Russians are literate and have access to books and magazines and the secrets of progress. They tell those illiterates that China is now making every man, woman and child literate as fast as possible; they tell them that if they will overthrow their present governments and go Communist, all of them will become educated, just as they all become educated in Communist countries—and that all of them will be emancipated from the anguish of everlasting hunger, and from the darkness of eternal ignorance. This is a kind of fulfillment that every illiterate desires.

Meanwhile, our Government does nothing, and says nothing or next to nothing, about this passion of the hungry multitudes to come up out of poverty through education. It is our fatal mistake; it must change without delay. Waiting a few more years can lose the world on this educational front.

For the Communists have an astonishing accomplishment in literacy to show the rest of the world. Lenin was convinced that in order to make all Russians Communist, it was necessary to teach everybody to read newspapers, and then to pour a constant stream of daily Communist propaganda into every Russian home. So he began a tremendous compulsory literacy campaign, using 3 million volunteers to teach. In 20 years, Russia was lifted from 9 percent literacy to over 90 percent literacy; today Russia is probably as literate as the United States. She is publishing more books, magazines, and newspapers than we are. This tremendous literacy drive was compulsory, but it was the most popular thing the Communist government ever undertook, because people wanted to become literate.

We were shocked by sputnik into the realization that at the apex, Russia was abreast or ahead of us in science. We need to be shocked into the realization that this scientific superstructure is based upon an educational foundation as broad as our own. When the Communists promise universal education, they mean it. But their education would all be Communist, and everything else would be eradicated.

Since China went Communist, she has shown the same realization that to succeed she must make her 600 million people literate. The Chinese characters constituted a formidable barrier to literacy; so 2 years ago China adopted a Roman alphabet as good as the best in the world, and now she is engaged in a drive to make every man, woman, and child literate in this new alphabet. In all likelihood, China will be as literate as Russia within 20 years. It is the most popular thing the Communists are doing, for people know that education is the strong rope up which they must climb to better things.

Meanwhile, America is devoting her time and effort and money to educating 175 million Americans to keep up with Russia. She is doing almost nothing to help a billion people in the free world rise up out of the dictatorship of ignorance. Mr. Hollister, former Director of ICA, wrote in the Saturday Evening Post of March 28: "In using the taxpayers' money, my sole concern was, and is, the self-interest of this Nation." We talk, and in the matter of literacy, we act, as though our only real concern is ourselves. As a Christian, this makes me shudder. How much more must it make the hungry illiterates shudder when it is interpreted by the Communists as proof that we are utterly indifferent to their needs?

This neglect of our free world illiterates is not only wicked; it is against the interests of America herself. A billion people will turn against us at every opportunity if they believe that their only hope of rising to a new level of life lies in communism.

So right now we are falling frighteningly behind the Communists in the battle of literacy. Not because we lack the know-how; we know how to make those countries literate. Not for lack of eagerness on the part of the masses; they are crazy to learn. Not from opposition by other governments; they are desperately eager for literacy for their masses, as a way to ward off communism.

And nobody opposes literacy from an economic standpoint. It has no enemies in the United States, for literacy abroad would be a boon to American business by providing greater foreign markets. Literacy is a program which will not have serious opposition anywhere. My experience through the United States and throughout the 97 countries where I have worked indicates that if the United States were to espouse literacy strongly in backward areas it would be one of the most popular causes we ever promoted; it would undercut the terrific effects of Communist propaganda. That is mutual security.

Unless and until we bend our efforts to educate this illiterate billion, I think we are pouring $40 billion a year for military defense down a rathole, and that our economic and technical aid is wasted; for we shall lose the world on the educational front.

Do we have enough money to undertake this free world literacy program? Certainly we have. If we shift the list of priorities, and place this one high where it belongs, we can carry this literacy effort at a very moderate cost. It will swiftly reduce other expenses we are shouldering around the world; for it will help those people to help themselves, which is after all what we most desire.

I have presented this tremendous gap in our world defense program to the three largest American philanthropic foundations. All of them said they had not dared to attack the problem because it is too big. So the biggest hole in our world defense wall is left wide open because it is so big nobody has been willing to try to close it. And through that hole the Communists will take the world, unless we stop being awed by its magnitude, and close it.

The hundreds of literacy men and women, Americans and nationals, whom I have helped to train during the past 30 years, stand ready to help anywhere in the world. They agree with me that these illiterate multitudes are the easiest people in the world to win as our fast friends, if we convince them that we really care for them. We do not think the gap is too big for America.

Mr. Hudoba, of Sports Afield, Writes on Migratory Fisheries

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. NEUBERGER. Mr. President, one of the most thoughtful and informed commentators in the field of wildlife and fisheries is Michael Hudoba, the Washington correspondent of Sports Afield magazine. Mr. Hudoba is known on both sides of Capitol Hill as a stalwart conservationist, and a man who has dedicated his career to the preservation of natural resources.

Mr. Hudoba contributed to the May 1959 issue of Sports Afield magazine a challenging column on the question of protecting migratory fisheries in the Pacific Northwest. I ask unanimous consent, Mr. President, that the column by Michael Hudoba be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MICHAEL HUDOBA'S REPORT FROM WASHINGTON—TAKE YOUR CHOICE: DAMS OR SALMON—BIOLOGISTS RACING AGAINST TIME TO SOLVE PROBLEMS POSED BY 600-FOOT DAMS, SOLUTION NOT YET IN SIGHT

Salmon and steelhead and dams are rapidly approaching a head-on collision in the Pacific Northwest. The outlook for fish does not hold any great hopes. Here is an area where the mighty Columbia and its tributary stream, the Snake, head in mile-high snowcapped and glacier-bound reaches of the Wyoming, Montana, and Canadian Rockies and pour their turmoiled waters into the Pacific at the Columbia's mouth. It is here lies the greatest power potential on the North American Continent according to engineers. Hundreds of miles of rushing water pour through great gorges carved out of the rugged mountain chains in past eons of history. The very thought of piles of concrete and steel 600, 700, 800 feet high harnessing the rushing torrents keep imaginative engineering dreamers awake nights in ecstatic glee.

The problem is not new. It has been going ever since settlement of the Northwest. And dams are not the sole trouble. If salmon and steelhead eventually disappear, high hydroelectric dams will probably administer the coup de grace, but agriculture, logging, pollution, siltation, expanding civilization, removal of industrial gravel from spawning beds, forest fires—all will have had their influence.

As salmon and steelhead have waged their persistent battle for survival, attitudes have changed. When the first big dam was built astraddle the lower Columbia during the thirties, the engineers in charge were almost contemptuous of the fish problem. They declared publicly that their interest lay in producing power. It was only through the strenuous efforts by conservationists that fish ladders, traps, and fish lifts were included in the 60-foot-high concrete block across the migration route. When 500-foot Grand Coulee Dam went in far upstream on the Columbia, all fish passage attempts were completely abandoned in favor of attempts to transplant the upriver runs into lower tributaries.

Had appreciation of the importance of the fish resource to the people of the Northwest been more realized by the engineers in the early days, the present crisis might have been arrested. Funds for research into the complicated problems have always been extremely small when compared with the cost of the dams, or even the fish passage facilities which have been included in all since Grand Coulee was built.

But salmon have done well in spite of adversity. They have successfully negotiated the under-100-foot dams in the lower reaches. In fact, those of salmon and steelhead races which fight their way into the upper Columbia and the vast Snake River, with its important spawning tributaries, have gradually increased in spite of such deterrents. For dams of this height, the big fellows have been able to go over or were artificially helped by trapping and hauling around the dams. The small migratory fingerlings return to the ocean by tumbling over the spillways or riding the lower waters as they race through the blades of spinning turbines.

But now new problems are pressing ever more closely. The lowhead dams on the lower Columbia are about completed and the eyes of power-hungry planners and turned

upstream where canyons are deep. Dams 500, 600, 700 feet high are planned across the Snake, the important Salmon, the Clearwater, the Grand Ponde and the Imnaha, to name a few. One 250-foot dam is already built at Brownlee and another just below at Oxbow. It was here 4,000 salmon and steelhead died last summer because of a faulty fish trap, and another estimated 6,000 of the 12,000 which were hauled around the dams have failed to show up on the spawning beds.

The proponents of the high dams are almost lightly giving the State and Federal fishway management agencies 5, even 10 years' time in which to solve the difficult fish passage problems. Presumably, if they are not solved then, the mighty runs of upriver salmon and steelhead will be given the goodby death kiss.

Recently, a newly activated fisheries subcommittee of the Columbia Basin Interagency Committee under Albert M. Day has demanded recognition for increased funds for research if it is to do its share in solving these difficult tasks.

The Oregon congressional delegation led by Senator RICHARD NEUBERGER, Democrat of Oregon, has launched a move to seek $700,000 Federal funds for July 1959 for this purpose and continuing appropriations of at least $1 million a year until answers are found.

Collapse of U.S. Dollar: Savings Bonds Plan for Annuity Ended

EXTENSION OF REMARKS
OF
HON. JOHN SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. SPARKMAN. Mr. President, yesterday there was published a very interesting article by the very fine writer, Sylvia Porter. The article is entitled "Collapse of U.S. Dollar: Savings Bonds Plan for Annuity Ended."

In the article Miss Porter treats of a particular case in which an effort was made to build up an annuity by means of savings bonds.

I believe the article is a thought-provoking one. Certainly it illustrates what I have long felt clearly, namely, that the little fellow, who from time to time is encouraged and urged by the Government—for patriotic reasons—to invest in Government savings bonds, the few dollars which he may be able to save from time to time, is the one who gets the worst end of the deal, when we consider all of the bond transactions in which the Government is engaged.

I ask unanimous consent to have the article by Miss Porter printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLLAPSE OF U.S. DOLLAR: SAVINGS BONDS PLAN FOR ANNUITY ENDED

(By Sylvia Porter)

My lifelong friend, Mac, called me the other day and after short pleasantries, he blurted it out: "You know those 'baby bonds' I've been buying every week since 1937 to build an annuity for Janice and me? Well, I've decided to cash them all in and I want your advice."

"Wait a minute," I protested and my mind raced back. Mac had started buying a $37.50 U.S. savings bond each week 22 years ago to create an annuity on his own. His plan had been to start cashing in a bond a week at $50 when he retired and he had deliberately disciplined himself into buying enough bonds regularly to keep him going for a lot of years in later life. I had enthusiastically endorsed this program from the start, had written about it repeatedly during the wartime forties. Now here he was—after all these years of buying baby bonds, war bonds, savings bonds—throwing over the whole program.

"You retiring, Mac?"

DOLLAR PREDICAMENT

"No. I just don't want to hold these bonds any longer. That $50 a week doesn't mean to me what it did. I don't have to tell you what has happened to the dollar. And I'm tired of having my friends tell me I'm a fool not to put my money in investments that can earn a lot more."

"And you want me to tell you what stocks to buy?"

"Not stocks," he said and here came his surprise. "I want to go into other U.S. Government securities and I want you to help me."

So then we worked it out. Mac is cashing in the whole wad and his savings bond nest-egg has grown to many thousands of dollars over these 2 decades. He's paying a tax on the accumulated interest and he is:

Investing one-third in the U.S. Treasury's 2⅝ percent bonds due February 15, 1965, selling in the market at around 91 cents on the dollar;

Investing one-third in the U.S. Treasury's 2½ percent bonds due December 15, 1969, selling in the market at around 85 cents on the dollar;

Investing one-third in the U.S. Treasury's 2½-percent bonds due September 15, 1972, selling in the market at around 83 cents on the dollar.

PAY OFF UNDOUBTED

This is what Mac will achieve:

As these bonds come due, each will be paid off at 100 cents on the dollar. There is no doubt of the payoff. He is thus guaranteed a gain of nine points on his 2⅝s in 1965 and of 15 to 17 points on his 2½s in 1969 and in 1972.

On this gain, he'll pay a long-term capital gains tax—assuming this tax is still in effect in the years to come.

Each year he'll collect interest, amounting to $2.50 per $100 on his 2½s, $2.62 per $100 on his 2⅝s.

These are minor coupons in these days of rising interest rates but, because he is buying the bonds at such deep discounts from their original sale prices, his annual return actually ranges from 4¼ to almost 4½ percent. This is dramatically more than he has been getting on his savings bonds, and he has been earning nothing on his matured baby bonds.

CAN DECLINE MORE

"Don't forget the bonds you're buying can decline some more in price, and probably will," I warned Mac several times. "These are not riskless savings bonds; these are marketable securities. That gain is guaranteed only if you hold to maturity. You could have losses meanwhile."

"I figure I can hold," he said. "This is a better deal for me. What a shame my annuity plan didn't work out. You ought to tell others what you have told me. It's only fair."

Yes. Mac has made a better deal financially by switching from his savings bonds to the Treasury's marketable bonds now selling at prices equivalent to annual returns of 4¼ percent and more. It is a shame that the interest the Treasury is paying to little buyers of its savings bonds is now so much less than it is paying to big buyers of its other types of securities. It is high time that the Treasury put the little bond buyer more on a par with others. It is only fair that you be told the facts.

This I have done in this true tale about Mac.

Stalin Era in Russia Past

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, May 28, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from Cyrus S. Eaton, of Cleveland, Ohio, together with an article entitled "Stalin Era Past, Americans Stress," written by Harrison E. Salisbury, and published in the New York Times.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

THE CHESAPEAKE & OHIO RAILROAD CO.,
Cleveland, Ohio, May 14 1959.

Hon. WILLIAM LANGER,
Senate Office Building,
Washington, D.C.

DEAR SENATOR LANGER: American visitors to the Soviet Union, including last year's delegations of electric power officials, steel executives and educators, have come away with the feeling that Russian progress in science, industry and education, as well as other fields, is not being fully reported in the American press.

This sentiment is forcefully reflected in the enclosed Moscow interview of Dr. Harlan Hatcher, distinguished president of the University of Michigan, by Harrison Salisbury, one of the most responsible correspondents of the New York Times. I may add that the Hatcher-Salisbury interview confirms my own careful observations in the Soviet Union last fall.

The views that Dr. Hatcher expressed to Mr. Salisbury deserve to be read by everyone interested in our relations with the Soviet Union, upon which the fate of mankind depends.

Sincerely yours,

CYRUS EATON.

[From the New York Times, May 12, 1959]

STALIN ERA PAST, AMERICANS STRESS—VISITING EDUCATORS ALSO SAY SOVIET MUST REVISE IDEA OF ROBBER BARONS' UNITED STATES

(By Harrison E. Salisbury)

Moscow, May 11.—President Harlan H. Hatcher of the University of Michigan said today it was time that Americans realized the Stalin era was dead and that Russians recognized that the age of the robber nations was past.

President Hatcher made his comment in summing up his favorable impressions of the Soviet educational system from a month's inspection of Soviet universities.

Dr. Hatcher is the leader of one of several American educational groups that have been surveying the Soviet educational field. Other ranking educators who have just completed a study tour include President Henry T. Heald of the Ford Foundation and Shepherd Stone of the Ford Foundation, Prof. Philip E. Mosely, director of studies of the Council of Foreign Relations; F. Cyril James, vice chancellor of McGill University, Mon-

treal; Norman P. Auburn, president of Akron University, and William Pine, head of the scholarship program of the Ford Motor Co. fund.

SOVIET GETS HIGH MARKS

Dr. Hatcher spoke only for himself. However, the educators generally gave Soviet higher education very high marks.

"Soviet society is moving at a much faster rate than is generally realized either here or abroad," Dr. Hatcher declared. "Education is the motivating and guiding force in this evolution. I think that the direction of this movement is going to surprise everyone."

Dr. Hatcher said it was time that "my countrymen begin to understand that changes can take place in the Soviet system and that these changes are actually occurring before our eyes."

He said he felt that too many persons in the United States, particularly at the policy-making level, tended to overlook the evolution that has occurred in the last 6 years.

"Stalin is dead and it is time that Washington began to realize this," Dr. Hatcher said. "And in the same connection it is high time that Moscow understands that the era of the robber barons, the era of primitive 19th century capitalism, has ended in the United States and given way to a completely new way of life."

UNIVERSITIES VISITED

The group of educators headed by Dr. Hatcher has visited seven of the principal Soviet universities—Moscow, Leningrad, Kiev, Tiflis, Tashkent, Samarkand, and Irkutsk. Their principal impression in Soviet higher education was one of drive, energy, pioneering spirit and high competence. They devoted chief attention to the humanities and were surprised to find that contrary to the reports of some observers Soviet humanities were not being skimped for the sake of science.

"On the contrary, we have found that the humanities here have benefited from the impact of new scientific attitudes," Dr. Hatcher said. He gave much credit to the excellent foundation laid in the Soviet 10-year schools in languages and in literature, not only of Russia but of foreign countries.

"Students arrive at the university wonderfully well prepared," he said. "They have excellent study habits. Their extracurricular activities are tied into serious subjects. Reading habits are widespread and good. The use of libraries is exceptional."

It was his opinion that Soviet scientists, engineers, and technicians had a broader basis of the humanities than many in the United States.

He helped conduct a seminar for graduate students at Moscow University in contemporary literature and was surprised at how widely read and conversant the students were with English and American literature.

"There is a spirit of competition all the way through the Soviet education system and indeed Soviet life which I did not expect to find," he said.

As far as ideology is concerned, Dr. Hatcher said, he examined the content of many ideological courses and found their general nature not so different in concept from American courses in civics and government as he had expected.

He was particularly struck by the driving energy and pioneering spirit east of the Urals. Irkutsk University with 3,500 students soon will double in size while Moscow and Leningrad will remain relatively stable.

Workload at the New York Naval Shipyard Matter of Vital Importance Both to the Nation and to Brooklyn

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. DORN of New York. Mr. Speaker, the workload at the New York Naval Shipyard is a matter of vital importance both to the Nation and to Brooklyn. Nationally, because it keeps in operation the know-how naval shipyard, which is so vital to our defense activity. To Brooklyn, because of its economic impact. In this connection, I include a letter from Mr. Daniel Stea, president of the Master Mechanics and Foremen's Association of the New York Naval Shipyard:

MASTER MECHANICS AND
FOREMEN'S ASSOCIATION,
NEW YORK NAVAL SHIPYARD,
Brooklyn, New York, May 27, 1959.

Hon. FRANCIS E. DORN,
House of Representatives,
Washington, D.C.

MY DEAR MR. DORN: First, let me introduce myself. I am president of the Master Mechanics and Foremen's Association of the Third Naval District, situated in the New York Naval Shipyard, more familiarly known as the Brooklyn Navy Yard. The master mechanics and foremen represent the highest echelon of civilian management in the naval industrial establishment. Furthermore, in the issue to be presented in this letter, I feel sure I speak not only for top-level civilian management but all civilian personnel of the New York Naval Shipyard.

The matter which is the subject of this letter concerns the congressional action on the Navy's request for an additional modern-attack aircraft carrier of the *Forrestal* class. Congressional decision regarding this carrier is of critical importance, first to the national security and, second, to the personnel of the New York Naval Shipyard.

The fight to obtain congressional approval of a carrier such as this is not new. Therefore, we here in the shipyard have had a chance to search our souls and examine the data and logic of the issue, not only from the point of view of our immediate work needs, but from the broader and more important aspect of the national security. My presentation here focuses on the issue of our national security. On the other hand, this is not to minimize the importance of maintaining employment for the shipyard's approximately 13,000 people, plus another 10,000 in private industry whose employment depends upon the workload assigned here in the shipyard.

Speaking strictly as a layman, it appears to me that the needs of the Nation are confused by the complications and structure of our pattern of obtaining approval for such an item as a carrier. Our Navy's leaders have stated the country's needs in no uncertain terms. They have reiterated repeatedly the practical necessity for having available modern-attack aircraft carriers in today's state of world affairs. In essence, our Navy's top military leaders have asserted that limited war remains a probability. The use of unlimited weapons such as chemical warfare, biological warfare, and nuclear warheads are more a matter of cancelling out the enemy's preparation, with everybody agreeing that the introduction of these weapons would result in total catastrophe.

There remains only an evaluation of the expressed needs of our Navy's top military leaders—the same people who have fought the wars and have seen the modern weapons in actual use. Also, their needs have been expressed as a consequence of their responsibility to operate the Navy. But for some people, even in the Congress, such expressed needs require an open season type of technical evaluation. We begin to listen to the sensationalists, the space-cadets and the "rover" boys. Again, speaking as a layman, the utterances from such specialists simply do not make any sense.

For example, tomahawks have been compared with our weapons. Yet, tomahawks were never used in our operational Navy. The tomahawk must be compared with weapons in the culture in which used. On the other hand, the submarine will stand comparison. The submarine has been used in our Navy and in recent wars. A submarine is a formidable weapon. But, a submarine can hardly be equated with a carrier. The nations that have lost the big wars were always ahead in submarines. It seems as though whether we are ahead of anybody in tomahawks or submarines means very little.

Still another question arises in connection with the issue at hand, that is, the matter of the fueling system. Atomic energy has demonstrated its tremendous potential in the case of submarines. However, again, according to our Navy's top military leaders, the question of atomic power for aircraft carriers is another matter. To me, it appears that atomic power, even for the aircraft carrier, would have certain advantages. On the other hand, the need for a modern-attack aircraft carrier, whether atomic-powered or otherwise, is of primary and overriding importance. It must be emphasized that the most critical aspect of the problem here centers around the need for a longer flight deck for our modern high-speed carrier aircraft. It would be sheer folly were the Congress to deprive our Nation of its basic needs for security because they have in mind something even better.

What can the Congress be thinking about when they question the usefulness of the modern-attack aircraft carrier when no sensible substitute has been proposed? Are we thinking only in terms of unlimited warfare and total destruction in which case perhaps it would be better to discontinue our sessions altogether and have some fun while we still may.

The freedom which makes America so great allows for many a dissenting voice even that of a certain pretender to the throne of the kingdom of atomic submarines who continually persists in imagining and constructing weapons which are designed exclusively to satisfy the needs of the war of the worlds. Such fantasy planning, in the absence of operational experience possessed by the top Navy's military leaders can only avalanche us all into the next world. It is significant that this same individual is equally vociferous in his utterances regarding our system of education, our industrial organization structure, our mode of living and everything else in which he lacks operational experiences. On the other hand, we feel that we can be proud of what we have in America

whether it be the best system of education in the world or the best Navy in the world, both of which have made steady and sure progress through many years of trials and tribulations. Who would deny that the unprecedented progress of our great Nation has been the consequent of our democratic progress which develops the maximum potential of our people in an organized context, at the same time allowing for individual differences.

To say the least, we resent the attentions given these nonsensical attacks on all that has been important to our life, liberty and pursuit of happiness, to say nothing of our military victories. We deplore the unwillingness of such individuals to meet actual issues head on, answer specific questions and come up with facts but, instead, hide behind big heads on small bodies with a total disregard for the higher level operational experiences of our civilian and military leaders.

There comes a time when the aggressiveness of our righteous and proper actions must be stepped up—a time when vigilance is called for. We ask you in the name of our country and all it stands for to consider the practical implications of disregarding the expressed needs of our Navy's top military leaders, and their wonderful record of defense over the years—of disregarding these people and taking note of those individuals whose sensationalism appears to be their greatest virtue. We ask that Congress get down to brass tacks and give our Nation the weapons our military leaders know are required. We ask this in the name of the 13,000 people of the New York Naval Shipyard and of those who have worked here in the past and will continue to dedicate their efforts here in the future.

We are proud of building naval ships such as modern-attack aircraft carriers. We are proud to be the ones who can do what our military leaders need done for our national security, and we will not be thwarted by the ideas of the science-fiction thinkers, particularly in the face of fundamental factual data and logic to the contrary.

We ask that this letter be read to the Congress and made a matter of CONGRESSIONAL RECORD.

Respectfully yours,

D. STEA, *President.*

REA Loans: Not an Expense, an Investment

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Not an Expense, an Investment," which was published in the St. Louis Post-Dispatch of Friday, May 15, 1959. The editorial calls attention to the 24th anniversary of REA and discusses its value.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

The 24th birthday which REA is just celebrating is a good time to stop and reflect whether REA loans are a source of national expense or of national profit. During this now nearly quarter of a century, the Rural Electrification Administration has made loans totaling more than $3,800 million.

That money has built 1,480,000 miles of distribution lines and brought central station electric service to 5,140,000 rural customers. When REA started, 89 percent of American farmers lacked electric service. Now 96 percent of them have it. But REA's job is far from done. Once they get electricity, farmers, like anyone else, use it increasingly. It is up to the rural electric cooperatives financed by REA funds to keep up with that increasing demand.

Borrowers have repaid $599,700,000 in principal due to REA. They have paid $357,600,000 in interest. They have made advance payments on principal totaling $141,700,000. Only 1 of 1,082 borrowers is behind in payments. During a large part of REA's life the interest rate paid on its loans equaled or exceeded the rate which the Government had to pay for the money. That, we believe, is the way it ought to be. REA cooperatives need Federal financing because other financing is not available to them; but they do not need an interest subsidy. Current loan rates should reflect the current state of the money market.

When this has been said, it remains profoundly true that funds lent to REA cooperatives are performing a service for our people that would not otherwise be performed, and are being paid back promptly. "The rural electrification program," says REA Administrator David A. Hamil, "has proved one of the soundest investments ever made by the people of this country." It is a sound and profitable investment for everyone concerned.

Education To Match Our Times

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. ENGLE. Mr. President, we are at that time of the year when the closing of the academic program for a brief vacation period has an even greater significance for hundreds of thousands of our young people of the graduating classes than it has for the pupil census as a whole.

In speaking of this special significance of the season to the graduates—especially the high school seniors—I have primary reference to the counseling they receive on their future problems and prospects, notably during the commencement ceremonies.

Of course the number of commencement exercises and the number of commencement addresses which have been delivered, even in the lifetime of those of us present in this body today, have been virtually countless. Each graduating class received its full share of the pearls of wisdom from the text of the commencement speaker. It is difficult to discern much that is not repetitious of a great deal that has been said before when we hear or read a commencement address only recently delivered.

Sometimes, however, even though the theme may be ancient, the new text that comes to our attention has a freshness of rhetoric or a special approach to logical conclusions which prompts us to listen more attentively or read with somewhat more pleasure and enlightenment than would normally be the case.

On the otherhand, sometimes the author and speaker of the commencement address is a person who excites our imagination and given cause for us to examine his product somewhat more closely.

Mr. President, I believe it was a combination of these conditions—plus an intriguing title—which prompted me to read with much pleasure and profit a commencement address delivered at Harpers Ferry, W. Va., last night to the high school graduating class of that community by the distinguished senior Senator from West Virginia [Mr. RANDOLPH].

I had the privilege of serving in the House of Representatives with the able senior Senator from West Virginia, where he capably called upon his background as an educator and journalist, as well as his ability as a practitioner and teacher of the spoken word, to clearly present his viewpoints on many vital issues. In this body, where it again is a privilege to serve with the gentleman, we know that his horizon has been broadened by both additional experience as an educator and a businessman, and his lengthy prior period of service in the Congress. Thus, as he spoke to graduating classes recently at Glen Rogers and Harpers Ferry in his home State of West Virginia, and as he speaks tonight to the senior class of Elkview High School, tomorrow night at Dunbar High School, and subsequently to the graduating classes of other high schools in his native State, the senior Senator from West Virginia wears the toga of wide experience and delivers messages to the graduates which are as meaningful as they are rhetorically pleasant to hear or read.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the address delivered by the senior Senator from West Virginia [Mr. RANDOLPH] at the commencement exercises May 27, 1959, in Harpers Ferry, W. Va., for the graduating class of the high school there, entitled "Education To Match Our Times."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EDUCATION TO MATCH OUR TIMES

(Address by Senator JENNINGS RANDOLPH, Democrat of West Virginia)

Ladies an gentlemen and graduates of Harpers Ferry High School, I am grateful for the opportunity to share in the commencement program of the class of 1959. It is a particular benefit for those of us who are largely preoccupied with the affairs of an adult world to return to the presence of youth—to share again in the sense of challenge and the drama of a beckoning world.

Especially is this so at commencement time—the very word itself indicating a beginning rather than an end, and the diploma being a license to proceed on new terms rather than to retire on the old ones. It is customary at such a time for the person in my present role to tell you that you are now entering the world—that life is a serious affair, and that you must now place aside the idle pleasures and pastimes of youth.

I believe I need not tell you this—even if it were so. For I believe that not only have you been in this world for some time, but

I daresay that life wears as real a face to youth as it does to adults. Your sorrows and your joys, your victories and your defeats, are felt as keenly—perhaps more so—than those of your elders, since your sensibilities have not been dulled by custom and usage.

And surely there is no more infuriating statement to the young than the self-righteous comment that "You're too young to understand—when you're older, dear"—as though age alone wears the badge of understanding.

But if commencement is not this simple act of entering the world, it is in truth the beginning of a new and significant phase in your life. For some of you it means a brief interlude before assuming a new role as student in college. For others it presents the prospect of a choice in business or industry or agriculture. And for some of you it may mean the assumption of family responsibilities in the not-to-distant future.

All of you, however, share at least one common element in this experience: you are leaving behind the relatively sheltered atmosphere of high school where many of the decisions have been made for you and where the range of your own freedoms and responsibilities has been comparatively restricted. From here on, for better or worse, whether in college, at work, or in marriage, the responsibility of your own acts, your own determinations, will be increasingly yours. The world will henceforth adopt the view of the poet who stated:

"Our acts our angles are, or good or ill,
Our fatal shadows that walk by us still."

—*Epilog to Beaumont and Fletcher's "Honest Man's Fortune."*

Thus, your growing freedom of the right to choose carries with it the responsibility for making your choice. In this respect you as individuals must carry on the process of education—on your own initative—from where you leave it today. And it is your fate and your fortune to embark upon this adventure during perhaps the most difficult and complex times our society has ever faced.

It has become a commonplace to refer to ours as a time of revolution—industrial revolution at home and political and social revolutions abroad. Yet the true revolution is still the one we gave birth to almost 185 years ago—the revolution of the individual. The true revolution is the revolution of Thomas Jefferson, not Karl Marx—of the belief in the dignity of the individual rather than the authority of the State. This is the revolution of the American proposition which was so clearly stated by Henry Thoreau when he wrote that "there will never be a really free and enlighened state until the state comes to recognize the individual as a higher and independent power, from which all its own power and authority are derived, and treats him accordingly."

Thus it is that the task of education today—formal education in the schools, as well as self-education in your own lives—is to recreate the sense of individual responsibility, and this means to reestablish and rededicate our belief in man—the belief that man can control his own destiny if he will. For freedom and responsibility are but opposite handles of the same pitcher.

No one understood this better than Abraham Lincoln—who knew so much of the terror and wonder of the human soul—when, in the dreadful December of 1862, he pointed the way of duty to the Congress in these words:

"Fellow citizens, we cannot escape history. We of this Congress and this administration will be remembered in spite of ourselves. No personal significance or insignificance can spare one or another of us. The fiery trial through which we pass will light us down, in honor or dishonor, to the latest generation. We—even we here—hold the power and bear the responsibility."

We pay that our Nation may never again bear such a burden. Yet, while our times do not always provide the occasions for dramatic and heroic actions, the measure of our own responsibility is not lessened. The daily choices, which gather as the sands in an hour glass, are just as vital in our own lives as the most momentous decisions in the affairs of state. I am not, therefore, addressing you in terms of the kind of responsibility exercised by Lincoln, or by our leaders today. I am talking about responsibility—duty—moral obligation—call it what you will—in the terms that you face it, not in my terms, nor in your parents', nor in your teachers'.

First—and also the final—in importance is the obligation to seek to live up to your full resources as a human being. And this, I assure you, is no easy matter. The great psychologist and philosopher, William James, remarked on this point, that "as a rule men habitually use only a small part of the powers which they actually possess and which they might use under appropriate conditions. Most of us feel as if a sort of cloud weighed upon us. * * * Compared with what we ought to be, we are only half awake. Our fires are damped, our drafts are checked. We are making use of only a small part of our possible mental and physical resources." This James called the habit of inferiority to our full self.

To speak in concrete terms this means to accept those choices which challenge your full capacities—not to look for the short-cut and the painless way of "three easy lessons" which has become almost a national disease among us. For those of you who are going to college it will mean, among other things, choosing courses of genuine educational value rather than the so-called "snap" courses which make for easy grades. For others it may mean turning down a job which offers immediate but short-term rewards for a lengthy apprenticeship to a genuine and honest craft. But for each of you there exists the overriding obligation to discover yourself, for the one individual on earth you cannot afford to be a stranger to is—yourself—your own true self.

To know thyself—to expand the area of one's own consciousness—this is the first injunction laid upon, the first duty to be fulfilled by the responsible citizen. For those of you who are now about to be confronted with a new challenge in the process of self-discovery it is not too early to give thought to the role of your work in this respect.

Ralph Waldo Emerson stated that "A man coins his life in his work." Thus, whether you are destined for a career in the professions or the field of scholarship, whether in commerce or industry, whether in agriculture or the skilled crafts, your work is the main element offering direction, purpose, and continuity in your life. And here also we find freedom and responsibility joined—the freedom to make your choice in the light of your own interests and talents, and the responsibility to dignify your work, whatever your calling, by bringing your full energies and your best efforts to bear upon it. No society in history has offered the bewildering variety and complexity of opportunities that exist in our Nation today. But this very wealth may present its own problems to the novice, especially to the young person of unusual gifts who may squander his energies in several directions. The task of determining your interests and assessing your aptitudes and talents is therefore on which deserves the most serious thought you can give and the most competent professional assistance you can obtain.

In the choice also of your long-range goals and aspirations there lies the foundation for your discovery of self and your development as an individual. The person who takes for his own the aims and ideals that have guided the aspirations of mankind in general—this person may occasionally lose a battle, but he will win the final war. And though the person who seeks always his own private advantage, whose eye is on the main chance, may appear to prosper, the suspicion and distrust that he engenders eventually destroys the only qualities worth calling human.

Nor is this merely a Pollyana platitude of an elder trying to steer you through the rough waters ahead. The insights of the great moral teachers of the ages—of Leviticus, of Jesus of Nazareth, of the Buddha, of Confucius—all rest on the solid foundation of knowledge of the human soul. And for even the most "sophisticated" there is a growing acknowledgment of these truths in the study of modern psychology.

In recent years, for example, there has been an increasing acceptance among many rather hard-headed psychologists of a point of view called self-actualization. Though the word is a tongue twister, the idea is a rather simple one—as are many profound ideas. Briefly, it is the view that the truly successful people—an Albert Schweitzer, an Albert Einstein, an Eleanor Roosevelt, a Mahatma Gandhi—the people who provide for all the world a moral ideal—these people are motivated not by fears and anxieties about their own private and personal benefits, but by the drive to actualize the self, to live up to the full potentialities of their own true selves.

This too, however, involves the problem of self-knowledge and the challenge of decisions. For just as in our work, so in our choice of ideals and values, each of us must define the problem for himself. For each of us has his own unique pattern of interests and talents, and each of us has a limited amount of energies which can be devoted to causes outside ourselves. To join in support of every worthy cause which seeks to enlist our efforts, to march to every passing band is to squander and dissipate our energies. Rather, the part of wisdom is to determine those areas where one can most effectively serve and, in the words of Thoreau, for each to "step to the music which he hears, however measured or far away."

In closing, let me reemphasize that the growing into manhood and womanhood is part of a continuing education. Your teachers and your school have laid the foundation. The next development lies with you.

To come to a knowledge of yourself, and to attempt to live to the measure of your full self is your chief responsibility. If this obligation is fulfilled you will, in the process, answer whatever rightful claims your fellow men and women may make against you. In this way also you will fulfill the hope of a democratic society and justify our faith in the dignity of man—a faith which it is ever necessary for us to reaffirm to the world. If each of you lives in the light of this belief, bearing it with you in your hearts and minds your frontiers of the future will be worthwhile and rewarding.

Answer of Krebiozen Research Foundation to the Background Paper on Krebiozen of the American Cancer Society

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. LIBONATI. Mr. Speaker, the importance of finding a key to the arrest-

ment and cure of cancer is paramount in the minds of every human being in America today. The controversy over the question of krebiozen has been the result of certain interests in both the medical and pharmaceutical activities involved in the cancer program.

Several months ago the American Cancer Society released a so-called background paper on krebiozen. The whole purpose of the document was to discount Dr. Andrew C. Ivy, one of the greatest physiologists in the world, and to minimize and destroy the importance of krebiozen as a cancer remedy. But, fortunately for humankind, ailing and dying due to the affliction of cancer, the proposed scientific treatment of krebiozen in this background paper was based upon misinformation and outright mistatement of situations, conditions, and medical reports touching upon the area of krebiozen research.

It seems peculiar that, while every real doctor, blessed by God to carry out the great oath of Hipprocrates to serve the people, is endeavoring to discover, formulate, and develop a cancer remedy; but the pseudo-political leaders of the American Cancer Association and the profit marginal snatching servants of the American Cancer Society, upon whose directorate sit many of those who control the destinies of the American Medical Association, are using every effort to discourage, hamper, and belittle the one remedy that has proven itself; over 500 medical men, who have personally used the drug upon their patients and have submitted reports to the Krebiozen Foundation, describing, step-by-step, the progressive effects of krebiozen upon those terminal cases that have been given krebiozen in the last stages of cancer have proven it.

The American Medical Association, through its officials, has distorted and lied about the results of the administration of krebiozen to these unfortunates. It is only natural that Dr. Ivy, who has been the recipient of their vicious propaganda to destroy him as a medical authority in research, and as a member of the profession as well, could not now be expected, after such vilification and persecution, to turn krebiozen over to their self-appointed committee and, without any determining control on Dr. Ivy's part, or his associates, permit them to test the same and to enter their findings which, no doubt, regardless of the value of the drug, would result in the same forgone conclusion voiced falsely year ago in the false findings that they have heretofore publicized, that "it is worthless."

Dr. Ivy and his associate, Dr. Durovic, are not fools, to place the whole future of krebiozen at stake in the hands of the enemy since krebiozen has been tested by over 500 medical men, members of the American Medical Association, and found to have merit and biological activity. It would be like placing the head of a new-born babe within reach of the jaws of a wolf. Several of the false leaders of the American Medical Association would do anything to destroy krebiozen but, unfortunately for them, public clamor, echoing in the hills, is growing louder and louder. Their pet cancer foundations and projects are losing donors and, in their powerful position, they finally had to capitulate and answer the people with the so-called research of the background paper on krebiozen by the American Cancer Society which, in itself, is an insult to the intelligence of the American people.

There are presently 42 persons, two of whom are physicians, who are alive and free from cancer and who, as terminal cases, were sent home to die, and then received krebiozen and are now without a trace of cancerous tissue or growth. There are also, at the present time, 64 other persons, two of whom are physicians, where their cancerous condition is in a state of arrestment and completely controlled, who also were terminal cases and sent home to die. It is certain that the truth always seeks out the liar.

Dr. John R. Heller, director of the National Cancer Institute, with its millions of dollars for research given by the Government through the Congress, should now in our estimation, change sides and forget the sweet mouthings in defense of the position taken by the American Medical Association and the American Cancer Society. He should trust those who are trustworthy and, thereby do a service to the common man on the street. He has only the importance that the Congress and his Government have given him in doing a job for the people. He had better move in the right direction and become more of a humanitarian and less a research perfectionist planner. Dr. Heller knows and is fully cognizant of the nefarious practices against krebiozen and its medical sponsors and also the distortion and the suppression of evidence given to the American Medical Association.

He further knows that the American Medical Association is in control of the American Cancer Society and the individuals serving in its official family are known enemies who have fought against krebiozen. Dr. Heller would best serve the people by granting a free test of this drug with Dr. Ivy as a member to insure honest results. The drug has already been tested by over 500 physicians and not found wanting. After all, 42 people who were sent home to die and are now, through the use of krebiozen, without a cancerous condition and free of cancer, should mean something to him. These things do not occur by accident. It is very kind of him to appear before the Subcommittee on Labor, Health, Education, and Welfare of the House Committee on Appropriations, to approve the funds set out for the operation of the National Cancer Institute and to mouth pretty statements but, whether he knows it or not, he is unwittingly a party to a common conspiracy to destroy a drug which is not toxic, and that will alleviate the sufferings and pain of unfortunates, regardless of its value as a curative substance, and he further knows that in excess of 100 persons who received krebiozen are either fully cured of the disease of cancer, or the disease is now controlled.

Dr. Heller is a strong leader in medical circles and, therefore, should act as a courageous man, in spite of the opposition of those of high professional reputation. He is a great doctor who, because of his high talents, controls the National Cancer Institutes, but he also enjoys a fiduciary relationship to the man on the street who look to men like Dr. Heller for protection and for the advancement of the development in research of drugs to alleviate and cure the ailments of man. The following paper by Dr. Andrew C. Ivy is his answer to the American Cancer Society paper. He must be heard:

ANSWER OF KREBIOZEN RESEARCH FOUNDATION TO THE BACKGROUND PAPER ON KREBIOZEN OF THE AMERICAN CANCER SOCIETY

INTRODUCTION

On March 9, 1959, the American Cancer Society released what it calls a background paper on krebiozen, which has since been reprinted in the Journal of the American Medical Association.

It would be expected that in addressing the public on any matter relating to cancer, the American Cancer Society would exercise an exact regard for truth. Yet this paper is neither honest nor truthful. It misrepresents the facts, omits much pertinent material and makes use of half-truths and falsities in order to discredit krebiozen and its supporters in the eyes of the public.

The overall aim of this paper is obviously to persuade the public by a variety of stratagems that blame for the failure to test krebiozen rest with Dr. Ivy and the Krebiozen Research Foundation rather than with the agencies which have refused such a test.

As a matter of actual fact, those chiefly concerned with krebiozen experimentation have sought such a test since 1952.

At that time Dr. Ivy proposed it to the American Medical Association as a means of ending the controversy over krebiozen. The American Medical Association refused.

In February 1958 in response to public interest, the American Cancer Society invited and the Krebiozen Research Foundation submitted a proposal for the testing of krebiozen. The American Cancer Society stalled this proposal for many months and finally rejected it.

Then in August 1958, Senator PAUL H. DOUGLAS in a Senate speech proposed that the National Cancer Institute undertake substantially the same test the Krebiozen Research Foundation had submitted earlier to the American Cancer Society and remarked: "This is a fair test. It can do no harm. It might do great good."

The Senator's proposal was immediately accepted by Dr. Ivy and the Krebiozen Research Foundation. The National Cancer Institute and its director, Dr. John R. Heller, rejected it.

Thus, a fair test to determine once and for all whether krebiozen is active against cancer has been sought from every responsible agency which could formally conduct it.

The fact that it has been refused by each in turn creates a paradox, very costly to the public, which is not easily explained in view of the extensive search for potential cancer remedies now being sponsored at great expense by two of these same organizations—the American Cancer Society and the National Cancer Institute.

Some 40,000 chemical compounds are being screened each year on the bare chance that they will show anticancer activity. Krebiozen alone—a drug which at the least has the evidence of some 300 doctors that it gives a 70-percent beneficial activity in advanced and terminal cancer patients—is denied a test by the very people who profess

to be leading the search for drug remedies against cancer.

The background paper of the American Cancer Society is an attempt to rationalize this situation by an attack on Dr. Ivy, on krebiozen, and on all others connected with it.

For purposes of reply, the charges, hints, and insinuations scattered through this document can be grouped under four main headings:

I. Regarding the test proposed by the Krebiozen Research Foundation and Dr. Andrew C. Ivy;

II. Regarding the substance itself, its discoverer, and his associates;

III. Regarding previous purported evaluations of the drug made by the agencies of organized medicine; and

IV. Regarding the attitude of the National Cancer Institute toward a fair test of krebiozen proposed by Senator PAUL DOUGLAS, of Illinois.

I. REGARDING THE TEST PROPOSED BY THE KREBIOZEN RESEARCH FOUNDATION AND DR. ANDREW C. IVY

The American Cancer Society paper states that, "the owners and proponents have demanded that the substance (krebiozen) be tested according to their own terms, which are demonstrably unscientific." The fact is, that we have asked for the most scientific test possible. The double-blind test is standard in the laboratory and is the world over accepted as the best method for evaluating the activity of a drug.

In this connection it should be noted that at one of the meetings with Senator DOUGLAS between Drs. Ivy and Durovic and members of the National Cancer Institute staff, Dr. Durovic asked Dr. Heller if he considered the double-blind test unscientific.

Dr. Heller answered: "No, of course not. It is our standard of drug evaluation at the National Cancer Institute."

Nevertheless, he admitted in answer to another question that, in his capacity as a director of the American Cancer Society, he had voted a little earlier that the proposal to evaluate krebiozen by this method should be turned down as unscientific.

This type of inconsistency has been manifest at every turn in negotiations for a test of krebiozen. Yet, neither the American Medical Association, the American Cancer Society, nor the National Cancer Institute has ever stated that the type of test proposed by the Krebiozen Foundation would not give clear-cut results as to krebiozen's activity. Nor could they do so. From Pasteur on, the double-blind test has been accepted in science as the most objective and certain method for evaluating a new therapy, since it rules out subjective impressions of both the physicians giving the treatment and the patients receiving it. Only results based on facts count.

Yet, the American Cancer Society and National Cancer Institute contend for one reason or another, that this method should not be used for krebiozen. One reason assigned for refusing the test, for example, is that its results—under the stipulated conditions—would not be acceptable to the scientific community.

This is to misinterpret the problem. What is required in the present situation is not to find something "acceptable to the scientific community," but to establish a fact. A fact, once established, compels acceptance. It is not something which can be refused or rejected at the whim or pleasure of a guild or professional group.

And if krebiozen is of value, who would wish to reject this truth? Surely not the humane and dedicated physicians who together make up the scientific community, and who are saddened almost daily at their helplessness to save patients in the late stages of cancer. It is they who are eager to do more than just lower the opiate curtain over the victims of malignancy.

Entirely invalid is the astonishing opposition to Dr. Ivy's assisting in the administration of the drug on the ground that this would not permit an opportunity to determine whether physicians generally can obtain the same results. This is to suggest that Dr. Ivy is a magician. It ignores the fact that krebiozen has been used by more than 300 qualified physicians, under suggestions from Dr. Ivy and his associates, as to the dosages and technique of administration. Dr. Ivy treated only a part of the patients personally. It is on the basis of reports of those physicians as well as Dr. Ivy's observations, that the foundation has ascertained krebiozen's incontrovertible beneficial effects.

The foundation has proposed that Dr. Ivy assist in the administration of the drug, because there is no denying that he has more knowledge and experience in its dosage-rates for different types of cancer than anyone else. Furthermore, his presence in administering the drug would be of inestimable value in avoiding possible errors, either intentional or inadvertent, which would make a thoroughly valid test unreliable. Neither Dr. Ivy, nor anyone else, could, by serving in this capacity, make an inactive drug give positive results. But relative novices in the administration of a new drug could inadvertently, unintentionally or through ignorance make a useful drug appear to be worthless.

II. REGARDING THE SUBSTANCE ITSELF, ITS DISCOVERER, AND HIS ASSOCIATES

In its efforts to cast doubt on krebiozen, the American Cancer Society intimates that the very existence of this drug is problematical. And this in the face of certain established evidence of its chemical composition. To this end, it also attempts to create suspicion as to the character, methods and intentions of its discoverer, Dr. Stevan Durovic, and as to the motives and professional competence of physicians taking part in its experimental application.

It ignores and misrepresents the great amount of material published about krebiozen during the past 8 years—material which includes accounts of the theory on which this drug is based, its process of manufacture, and what has been learned as to its chemistry.

Most glaring of all is the failure of the American Cancer Society even to refer to the great number of patients treated with krebiozen, many of whom have gained positive results.

Thus, asking the question, "What is krebiozen?" the American Cancer Society completely balks the true answer and calculatingly or out of ignorance, perverts the issue.

Krebiozen is a substance produced on the basis of a new concept of what cancer is and how it should be treated.

According to this theory, every living cell produces, among other substances, one which regulates its growth. If for any reason a cell is injured (by chemical, or physical means, for instance) so as to impair production of this substance, then such a cell becomes decontrolled and starts to divide. The result is a cancerous growth.

If this autogenous control factor—normally made by the cells themselves—can be supplied artificially, then the cancerous cell may be again controlled.

On the basis of this new approach, cells of healthy horses were stimulated by a growth factor, (in this case an extract of actinomyces bovis, which causes rapid cell growth and division) in order to induce them to defend themselves by producing larger than normal quantities of the growth regulatory substance (krebiozen).

Tried first on spontaneous tumors in animals, krebiozen was found to be highly active against tumor growth. It was later established to have the same activity against human tumor; clinical trial demonstrating that the active single dose is 0.01 milligram of crude substance, which is dissolved in 1 cubic centimeter of mineral oil for administration.

It is important to note here that at the time of krebiozen's discovery, no known substance was potent in such small amounts. Some years later, however, an even more potent substance was discovered in aldosterone, a hormone produced by the adrenal glands and now used in the treatment of edema. In any case however, it has long been known that hormones act in the body in infinitesimal amounts.

On the basis of its biological activity as well as its chemical properties, krebiozen is classified as a local hormone or autacoid.

The American Cancer Society paper deliberately disregards all of this scientific information and states only that krebiozen is "an alleged anticancer drug said to have been produced by Dr. Stevan Durovic." Nor does the American Cancer Society make any reference to the clinical investigation of krebiozen, which in the number of patients and physicians involved, as well as in its duration, is probably the most extensive in the history of cancer research.

Since 1950, krebiozen has been used in the treatment of approximately 1,500 cancer patients by some hundreds of physicians in the United States and 29 foreign countries. The results can be summarized as follows:

1. A demonstrated activity in different dosages against all types of cancer.

2. Subjective improvement such as relief or complete abolition of pain in 70 percent of treated cases. Objective improvement ranging from decrease to complete disappearance of tumor in 50 percent of treated cases.

3. Of 500 hopeless patients treated 5 to 9 years, 10 percent have been free of detectible signs of cancer for 3 to 8 years.

The American Cancer Society chooses not to acquaint the public with these facts but continues that in making krebiozen "Dr. Durovic claims that he injected 2,000 Argentinian horses with actinomyces bovis, a micro-organism which causes lumpy jaw in cattle, and from the blood of these infected horses he extracted 2 grams—about one-half teaspoonful—of a whitish powder which he named krebiozen."

This is not accurate. The horses were injected with a sterile extract of actinomyces bovis. Hence the horses were not infected. With this misleading statement, the American Cancer Society is trying to give the impression that krebiozen is some concoction brewed from the blood of infected horses in impossibly small amounts. It is of a piece with what follows, namely that the full details of the method of extraction have never been disclosed and that Dr. Ivy has said that the process of manufacturing krebiozen has never been revealed.

These statements are also untrue.

Krebiozen is made by extracting the blood of injected horses with organic solvents (such as ether and benzene). The organic solvents are evaporated and the greasy-oily residue extracted with redistilled water, which when evaporated leaves krebiozen powder.

These basic scientific steps were disclosed publicly in 1951 and have been published several times since. (Report of the Krebiozen Research Foundation, 1954; "Observations on Krebiozen in the Management of Cancer," Ivy, Pick, and Phillips, 1956; "Medical Therapeutic Improvement of Canine Cataract," annual meeting of the Illinois Veterinary Association, February 1959.)

Dr. Ivy has never stated that this process has not been disclosed. He has said that the laboratory flow sheet or manufacturing details for krebiozen have not been revealed. Krebiozen is the property of Duga Labora-

tories, a pharmaceutical house incorporated in the State of Illinois, which financed the research leading to the drug's discovery. No pharmaceutical company reveals all of its manufacturing details on any substance.

Nevertheless, enough has been published regarding the manufacture of krebiozen so that Dr. Ivy was able to make a batch of the drug from 46 horses in 1956, or to enable any other competent investigator to do the same thing.

Thus, it can be seen that the allegations of the American Cancer Society in this regard are false and directed not at an honest delineation of the actual situation but used to convince the public that krebiozen is a secret remedy. Having made this attempt, the American Cancer Society goes on to intimate that it may also be nonexistent.

In this connection, it states "* * * Dr. Durovic brought this powder [krebiozen] to the United States. Here, without prior chemical analysis of the powder, he dissolved it in No. 9 mineral oil in the ratio of one part of krebiozen to 100,000 parts mineral oil." And again, "* * * he [Dr. Ivy] has neither seen nor analyzed the original substance in the undissolved state."

Here, the American Cancer Society makes use of two statements which are technically correct to bolster its previous false statement that the chemical composition of krebiozen remains unknown and to mislead the reader as to the scientific competence of Drs. Ivy, Durovic, and associates.

As a matter of fact, Dr. Durovic's procedure in dissolving krebiozen in mineral oil was correct and customary in sicence. In dealing with a new substance, the usual practice is not to spend time and money on chemical analysis until it is first shown that the product is active. For example, insulin was discovered and introduced in therapy in 1924 but its chemical formula was not established until 1956.

The basic chemical composition of krebiozen was determined in 1952 and announced in 1953. Additional data was published in 1956. Further chemical analysis showed that krebiozen is a lipopolysaccharide (a complex sugar linked to a fatty molecule). This gradual accumulation of chemical data regarding krebiozen, is similar to the progress made with insulin and cortisone and is in the best sicentific tradition.

It is correct that Dr. Ivy did not chemically analyze krebiozen powder before it was dissolved in mineral oil. But he did analyze it after it had been reextracted from the mineral oil.

The reader (of the American Cancer Society document) however, is meant to conclude that krebiozen has never been chemically analyzed and that such analysis is necessary to show that the product is of value in treating cancer patients, none of which is true.

To reinforce the false impression it tries to create regarding krebiozen, the American Cancer Society points out that two chemists, Drs. Paul Kirk of the University of California, and Arthur Furst of Stanford University, testified in 1958 that krebiozen is nothing but nujol.

Dr. Kirk stated he received six ampules from Dr. Batchelder, chairman of the American Cancer Society division in San Francisco. Dr. Furst testified that he found one ampule at Stanford University and that another ampule was given him by the same Dr. Batchelder (scientific procurement?). As an experimental drug krebiozen can only be obtained from the Krebiozen Research Foundation. Neither Dr. Kirk, Dr. Furst, nor Dr. Batchelder ever requested krebiozen and none was ever sent to them by Krebiozen Foundation.

Dr. Kirk also testified that by infra-red spectroscopy he detected something other than mineral oil. In the next breath he denied finding anything but nujol.

Dr. Kirk was quick to qualify his testimony by saying, "the net results of these various tests has convinced me that at least the ampules I received—I don't know a thing about any samples except what I examined—but that the samples I received consist of good grade mineral oil." Thus, after the bold yet bland forray denying the very existence of krebiozen, Dr. Kirk sought to exculpate himself from legal consequences by saying, "I don't know anything about any samples except what I examined." He did not wish to be held accountable for any statement about krebiozen in general but only regarding the six ampules which he used for his purported tests and which are no longer available, thus making it impossible to check the verisimilitude of Dr. Kirk's statements.

Still more striking is the testimony of Dr. Furst that he received only two ampules of krebiozen, and with these two ampules made the following tests: (1) The ultraviolet spectrum; (2) several chemical tests; (3) extractions; (4) toxicity studies on animals; (5) therapeutic tests against Sarcoma 180 in mice; and (6) therapeutic tests on Ehrlich tumor in mice. It is inconceivable that these tests could be done with two ampules of krebiozen. To show how ridiculous Dr. Furst's statements are, it is enough to point out that only to perform the toxicological test, he would have had to inject 12 animals daily for one month. For this one test alone a minimum of 360 ampules of krebiozen would have been required.

In any case, the testimony of these two chemists, referred to in the American Cancer Society report as distinguished, is chemically preposterous, if indeed, they analyzed krebiozen ampules as they swore under oath they did. Krebiozen is dissolved in No. 9 light mineral oil. These men testified that the ampules they analyzed contained nothing but nujol which is heavy mineral oil. Since krebiozen never was dissolved in nujol, but only in light mineral oil No. 9, which is quite different, what is to be inferred about the ability of chemists who cannot distinguish light and heavy mineral oil, which are so different that any school boy could tell one from the other.

Dr. Ivy challenged this testimony in an affidavit stating that either he or these two chemists were lying. Since statements of all three had been made under oath, he urged that the record of this hearing be submitted to a grand jury for a determination of perjury.

But the most significant point in all this mysterious analysis is the Machiavellian role played by the American Cancer Society. Dr. Batchelder, an official of the American Cancer Society, arranged this analysis. The testimony of Drs. Furst and Kirk was widely publicized in May 1958, just prior to the time when the American Cancer Society was reported ready to announce decision on our proposal for testing krebiozen. Dr. Ivy's demand for a determination of perjury upset what was apparently a prearranged plan to use this testimony as the basis for the American Cancer Society refusal to test krebiozen. The final American Cancer Society announcement to this effect was thus delayed until October, when it was said that our proposal was unscientific.

It is precisely this sort of unscientific maneuvering which underscores the need for the controlled double-blind test proposed by the Krebiozen Foundation. How incredible it is that the American Cancer Society can affect such concern as to whether the scientific community would accept this type of test, yet does not hesitate to offer testimony of the sort given by Drs. Kirk and Furst as proof that krebiozen does not merit testing at all.

To bolster the impression that krebiozen is ineffective, the author of the American Cancer Society paper cites the work of John B. Loeffer, Ph.D., who reported in the Journal of the American Medical Association on May 17, 1952, that krebiozen failed to affect transplanted mouse leukemia and lymphosarcoma.

Krebiozen does not affect transplanted animal tumors and was never claimed to do so. This was established at the very beginning of our work with this drug and was reported by us in 1951 in the initial publication on krebiozen. Thus, Dr. Loeffer's work only confirmed our own and if the American Cancer Society publication had been honest, it would have been referred to, if at all, in this sense.

The American Cancer Society paper makes much of the fact that publications concerning krebiozen research have been privately printed and that Dr. Durovic, a research scientist, has published nothing in U.S. scientific journals during his 10 years in this country. The implication is that there is something blameworthy in these facts.

And indeed there is. But it does not accrue to Dr. Ivy and his collaborators or to Dr. Durovic.

The real fact is that all publication on krebiozen in the medical literature has been systematically blocked—through the exercise of bureaucratic control by the American Cancer Society and the American Medical Association over the scientific community.

Publication of a report on 40 cases treated with krebiozen at the Lankenau Institute has not been permitted. This report written by the man who treated these patients is still being suppressed.

Dr. Ivy is the author of 1,500 scientific papers, 65 of them accepted for publication since the time he has been working with krebiozen. Yet he has never succeeded in publishing one article in a medical journal on krebiozen.

The monograph on this subject written by Drs. Ivy, Pick, and Phillips was initially accepted by a medical journal but was later returned after pressure was brought to bear on the publisher. It was subsequently rejected by two other journals and in the end was published by a nonmedical publisher, Henry Regnery, Chicago.

If Dr. Ivy, prominent as he is, failed in this regard, is it any wonder that Dr. Durovic, a stranger and a man under heavy calculated fire almost since his entry into the United States, could not succeed in securing publication for his articles. The latest attempt by Dr. Durovic to gain scientific publication was in December 1958 when he submitted to General Practitioner a very substantial article on the activity of krebiozen against spontaneous tumors in animals. The article was rejected.

Needless to say, the American Cancer Society paper omits all reference to these facts. It never fails however, to identify men who have submitted unfavorable reports on krebiozen as distinguished scientists. Those who have taken part in krebiozen research are scarcely identified at all.

Dr. John F. Pick, of Chicago, for instance, is dismissed as a plastic surgeon; Dr. Louis R. Krasno, as a researcher in antibiotic dusts.

The American Cancer Society almost pointedly refrains from telling its readers that Dr. Pick is one of America's most eminent plastic surgeons, internationally recognized, author of a standard text, "The Surgery of Repair," and well-known for his demonstration among prisoners at Stateville penitentiary, Joliet, Ill., of the role of facial deformity in the genesis of criminality. This involved corrective surgery on more than 1,000 men and aided the rehabilitation of most, a feat for which Dr. Pick has been honored by the John Howard Organization, and scientific as well as legal groups the world over.

The American Cancer Society paper also omits mention of the fact that Dr. Krasno's work with penicillin dust won medal awards

from both the Illinois State and the American Medical Associations in the year of its presentation. Nor does the American Cancer Society inform its readers that Dr. Krasno, a pioneer in aviation medicine, is currently director of medical research for United Airlines.

In support of its thesis that there is something questionable about those who have developed krebiozen, the American Cancer Society attempts to indicate that they have avoided customary procedures for the patenting and marketing of substances designed for use in therapy. In this connection the American Cancer Society paper comments, (1) on the status of the krebiozen patent application; and (2) on licensing procedures.

As to the first it states: "Some years ago, the owners of krebiozen applied for a patent but when the U.S. Patent Office returned the application with request for further information, the owners of krebiozen failed to supply this information and did not resubmit their application. Hence, there is no patent or new application for a patent on krebiozen, either the substance or the process, in the files of the U.S. Patent Office, as of January 1959."

This statement is false.

Dr. Durovic first filed for a patent (No. 254985) November 5, 1951. This application has been amended three times and is still pending under continuation dated May 5, 1958, with the serial No. 732,785.

The American Cancer Society discussion of the problem of licensing is intentionally misleading, directed at making the reader believe that application to license krebiozen for sale has never been made.

The facts are as follows:

The matter of whether krebiozen is subject to the jurisdiction of the Public Health Service, which licenses serums and vaccines, or to that of the Food and Drug Administration, which licenses drugs, is in dispute.

The Duga Laboratories holds krebiozen, by theory and chemical properties, to be a hormone and therefore subject to the Food and Drug Administration. In 1954 application for license was filed with this agency together with all necessary data for obtaining it. The Food and Drug Administration first accepted this filing under No. 9368, but later refused either to grant or deny a license and advised Duga Laboratories to submit krebiozen to the jurisdiction of the Public Health Service.

The reasons for the Food and Drug Administration handling of the krebiozen licensing application are plain to any one who knows the regulations governing the two agencies but they must be explained for the general reader who is not familiar with the technicalities of such procedures.

Under FDA rules, license is granted on a showing that the drug in question is not toxic in the prescribed dose. A showing of activity is not required. Petition for license must be passed on within 60 days. If the petition is not denied in this time, the drug is considered to be licensed. If the petition is refused, the decision is subject to court review if appealed.

Under Public Health Service regulations, however, proof of activity of the substance for which licensing is requested must be given. Furthermore, no time limit is set for decision, making it possible for the Public Health Service to hold up a license indefinitely. And lastly, no recourse to the courts is provided, either to force a decision or to appeal one which is unjust.

In view of the existing controversy over krebiozen and the prejudice against it, we believe that our clinical evidence would not be given consideration on its merits by the Public Health Service. And if this agency rendered an unjust decision, we would have no possibility of court action to rectify it.

This is the true statement of facts which the American Cancer Society distorts in order to convince their readers that the nature of krebiozen is so questionable that its owners have not dared subject it to scrutiny of Government agencies even for their own protection.

Similarly, the American Cancer Society totally misrepresents the financial aspects of the krebiozen problem.

As to the Krebiozen Research Foundation, the American Cancer Society paper states: "The foundation library center reports that the Krebiozen Research Foundation has not published a list of officers, a report of activities, or a financial statement."

Under its articles of incorporation, the foundation must submit each year a list of its officers and a statement of its purposes to the Illinois Secretary of State. A financial statement is filed each year with the U.S. Department of Internal Revenue, where it is open for inspection like all income tax reports of not-for-profit organizations. In view of this, it is not at all clear why the American Cancer Society picks out of thin air the foundation library center, as its authorized source rather than the official agencies.

For 5 years krebiozen was given free and the cost of maintaining the office of the foundation, and of packing and shipping the drug to the doctors administering it and supplying forms for clinical reports, were paid by the Durovics.

In 1954, the foundation was told that the Durovics no longer were in a financial position to support the full cost of the foundation, and the foundation then agreed to accept contributions from patients or their relatives and friends who were financially able and willing to contribute toward the cost of supplying the drug. The foundation always had made it clear, however, that if the patient was unable to do so, it still would continue to supply the drug free of charge. Today about 60 percent of patients still receive the drug free. Relatively few contribute the production cost of the drug given them, and whatever revenue is raised from this source is used exclusively to maintain further experimentation.

No official of the foundation has ever received any compensation for his work. They rely on other sources entirely for their livelihood. All this is omitted in the American Cancer Society paper.

As for Dr. Durovic and his brother, who have borne almost alone the full cost of the foundation's activity in making krebiozen available to those whom it might help, the American Cancer Society remarks:

"These individuals have made clear that they wish to recoup from the sale of the substance an investment claimed to be about $2 million and that they intend to sell the substance for profit as a proprietary drug."

Krebiozen was developed entirely at the expense of Duga Laboratories. If it should prove useful in the treatment of cancer, and commercialized why should not Duga Laboratories, a pharmaceutical house, at least get back its investment? Is this not customary in every country outside Communist rule and is it not the very basis of our American system of free enterprise?

In a further personal attack on the Durovics, the American Cancel Society declares: "The owners of krebiozen have repeatedly petitioned health organizations supported by public funds to underwrite a test of the therapeutic activity of krebiozen in collaboration with them. They hoped to use public funds to defray the cost, estimated at $500,000 or more, of testing this privately owned substance."

This is not correct.

Indeed, the whole discussion on this point is an intentional misrepresentation of the letter and the spirit of the effort to settle the krebiozen controversy by means of a definitive test. As a matter of fact, the owners of krebiozen have never petitioned anyone to test krebiozen. The American Cancer Society invited the Krebiozen Research Foundation to submit a proposal for a test. Senator PAUL DOUGLAS asked the Public Health Service to give krebiozen a fair test. Dr. Ivy requested the American Medical Association to cooperate in a fair test of krebiozen. This is not to deny, however, that Dr. Durovic and his brother are eager to see such a test performed by one or other of these agencies, not in order that they defray the expense, but because they (the Durovics) still believe these agencies ostensibly competent to supervise it.

The indication in the American Cancer Society paper that unproven methods or substances militate against possible cure of cancer by acceptable methods known at present is misleading. The methods known at present, including surgery and X-ray, are unfortunately nothing more than palliatives. These are necessary and must be used until something better is found, but they are not in any way the final goal and answer to ultimate cancer therapy.

Krebiozen is a pioneer substance which opens a new approach to the problem of cancer. It is not destined to exclude surgery where it is indicated. As a matter of fact, until now krebiozen has been used chiefly in cases where all acceptable methods have failed.

Unlike the American Cancer Society, Drs. Ivy and Durovic are very conservative about the use of the word "cure." What they do maintain, however, is that krebiozen represents a very significant advance in the cancer field and that krebiozen therapy is different in principle from any other now used against cancer.

These are all destructive, and too often self-defeating; as for example, the excision of cancerous tissue by surgery or its destruction by radiation. Krebiozen alone has a reparative function and represents an attempt to solve the biological problem of cancer on a biological basis, by supplying the substance which normally prevents cells from becoming cancerous. ("Observations on Krebiozen in the Management of Cancer," Drs. Ivy, Pick, and Phillips, Henry Regnery & Co., 1956.)

Dr. Durovic began the work leading to the discovery of krebiozen 27 years ago. When Dr. Ivy first presented krebiozen and the ideas on which it is based in 1951, many serious scientists considered them nonsensical. Then surgery, X-ray, and more powerful forms of radiation, and cell-destroying chemicals were the best hope of cancer research. Today it is a consoling fact to Drs. Ivy, Durovic, and their associates, that their concept of a natural defense against cancer which may be exploited for the benefit of the cancer patient, is accepted in the scientific world by both friends and enemies of krebiozen. As example, we may cite the words of Dr. Warren H. Cole, president-elect of American Cancer Society and the man who has twice turned thumbs down on krebiozen. Writing in the Journal of the American Medical Association of April 11, 1959, Dr. Cole remarked: "Evidence of the occurrence of spontaneous regression of cancer supports the concept of biological control of cancer and reinforces the hope that more satisfactory methods of treating cancer than surgery and/or radiation may be found in future years."

Even more significant is the work reported last year by the Sloan-Kettering Institute. The American Cancer Society ignores its relationship to krebiozen. Nevertheless, this was known to the American Cancer Society, if from no other source, from the following letter sent on July 22, 1958, by Dr. Ivy to Dr. Harold S. Diehl, American Cancer Society vice president for research and medical affairs:

"I have just completed a study of the June 1958 progress report of the Sloan-Kettering Institute for Cancer Research, which reviews their studies on the natural, body defense mechanisms against cancer.

"An understanding of this report emphasizes anew the importance of facilitating the performance of the double-blind controlled study of krebiozen recommended in February 1958, to the American Cancer Society by the Krebiozen Research Foundation. The Sloan-Kettering report, as far as it goes, confirms in detail the theory on which krebiozen was produced, and provides additional evidence showing why our contention, that krebiozen is therapeutically active in some cancer patients, should be correct.

"Since 1925, I have pointed out to my students that, physiologically, cancer is most likely due to the abnormal repair of an injury of some type, that the body must have some mechanisms for resistance against cancer, and that the only real hope we possess that cancer can be cured is the observation that perhaps in 1 out of 100,000 cases the body of the patient cures itself of cancer. For this reason, I have maintained since 1945 that great research emphasis should be placed on a study of the body mechanisms which provide resistance to the onset, invasion, and metastasis of cancer. As a member and executive director of the National Advisory Cancer Council, I urged that research on the immunology and virology of cancer be energetically promoted.

"This thinking, however, was not new. As stated in a publication in 1956 [1] 'the evidences for the existence of a natural resistance to cancer are numerous.' Many of these evidences were recorded years ago. By 1949 I had reviewed the entire literature to obtain a clue on which to start an investigation of the natural body defenses against cancer.

"It was at this time that Dr. Stevan Durovic came to me with a scientifically rational theory regarding the natural defensive mechanisms of the body against cancer, and a therapeutic product which had caused the liquefaction and disappearance of spontaneous tumors in some dogs and cats. The product was nontoxic per se. I believed a substance which regulated growth, which resisted the abnormal repair of injury, and which was secreted by the reticuloendothelial cells in response to an appropriate stimulation, should be nontoxic.

"Dr. Durovic theorized that 'krebiozen is present especially in the reticuloendothelial (RE) cells, which as is well known, react to various stimuli. When these cells are appropriately stimulated, krebiozen, which is not present in the blood (except in traces perhaps) under normal conditions, is released and can be extracted from the blood plasma' [1,2]. To stimulate the RE cells, he chose an extract of Actinomyces bovis, a mold which causes a tumor consisting in part of RE cells. He theorized that since this organism stimulate RE cells to multiply, it should cause RE cells to increase their secretion of an antitumor or anticancer factor into the bloodstream from which it could be extracted. He used an organic or a fat solvent, like benzene or ether, which is logical because certain physiological active substances in RE cells are soluble in such fat solvents, as well as in water. After evaporating the organic solvent krebiozen was extracted by water from the fatty residue.

"In our [Ivy, Pick, Phillips.] monograph published in 1956 [1], it was stated: 'Since the start of this [the krebiozen] investigation, and especially since 1951, we have been gratified to note the growing interest in the problem of the mechanisms concerned in providing the body with a natural resistance to cancer and how this resistance may be increased * * *.'

"It is gratifying to read in the Sloan-Kettering report the statement that 'There is reason now to believe that natural defenses against cancer exist. It has proved possible, by manipulating and enhancing these defenses, to cure laboratory animals with some types of transplanted cancer.'

"It is further stated in the Sloan-Kettering report, that 'different kinds of cancer may stimulate a common cancer resistance factor, or that different kinds of cancer have something in common that stimulate bodily resistance.' This agrees with our observations that krebiozen is of value in the treatment of some patients who have different types of cancer.

"More pertinent to the krebiozen theory and our therapeutic observation are the statements in the Sloan-Kettering report 'that zymosan does not inhibit the cancer directly but acts in some way in mice to enhance their natural defenses, tipping the scales in favor of the endangered host and against the cancer,' and that 'zymosan, unfortunately, is too toxic in man for clinical use.' Zymosan represents a substance extracted from yeast. Actinomyces bovis is a mold, a relative of the yeasts. When an extract of Actinomyces bovis is injected into mice with tumors, some tumors liquefy and slough out. But, the extract of Actinomyces bovis, like zymosan, is too toxic to use on man. But, Dr. Durovic, to avoid this toxicity, injects horses with the Actinomyces bovis extract, making the horses slightly ill, so that the RE cells secrete the resistance factor, 'krebiozen,' into the blood from which it is extracted, and finally made ready to be given to the cancer patient without making the patient sick. Theoretically, zymosan, if injected into a horse, might also cause the secretion of krebiozen into the blood.

"It is also very interesting to note in the Sloan-Kettering report that the substance called Cytolipin H in cancer cells which stirs up body resistance in a person without cancer consists of 'two molecules of fat hooked to two molecules of sugar.' In 1956 we reported that the microchemical analysis of krebiozen indicated that it could be a polysaccharide (a sugarlike substance) and a steroid (a fattylike substance).[1] Since then further studies indicate that krebiozen is "most probably a polyhydrocarboxylic acid or acids with some evidence of esterification.' That is, a polysaccharide joined to or mixed with a fatty substance.

"The Sloan-Kettering report in summary states: 'If the hunches and hopes of the Sloan-Kettering researchers are fulfilled by further work, then these achievements could signal a major triumph.'

"It should now be clearly evident why I stated above that the Sloan-Kettering report emphasizes anew the importance of facilitating the performance of the double-blind test by an arbitration type of committee. If the proposal of the Krebiozen Research Foundation is approved by the society, then the question of the value of krebiozen can be quickly settled.

"Whereas the Sloan-Kettering report states that as yet no application of their discoveries can be made for the benefit of cancer patients, we believe we have at hand a practical weapon against cancer which was produced on the basis of the same theory on which they are now working. Furthermore, I believe if the financial resources were available that the production of krebiozen could be markedly improved. I said in 1951, it may prove to be a key to 'the cure' and perhaps the prevention of cancer.

"In view of these considerations I should like to emphasize the great responsibility which now confronts the American Cancer Society. It is and has been my considered and sincere conviction that krebiozen represents the only presently available fruit of this new understanding of the problem of cancer to which the Sloan-Kettering researchers are contributing so outstandingly.

"Krebiozen has already been withheld unnecessarily for several years from many cancer patients whom it might help, through no fault of our own, but by the excuses of pseudo-critics.

"The decision of the American Cancer Society will determine whether Krebiozen will be withheld still longer from use in cancer therapy until other workers slowly and laboriously duplicate our work in toto. This decision is a grave responsibility."

III. REGARDING PREVIOUS PURPORTED EVALUATION OF THE DRUG MADE BY THE AGENCIES OF ORGANIZED MEDICINE

In the section captioned, "Has Krebiozen Ever Been Tester?" the American Cancer Society paper cites (a) the status report on krebiozen of the AMA committee on research, (b) the report of the committe on cancer diagnosis and therapy of the National Research Council; (c) the report of a committee of six physicians, headed by Dr. Warren Cole of the University of Illinois, commonly referred to as the Cole committee report, and (d) the opinion of Dr. Stanley Reimann, former director of the Lankenau Cancer Institute, Philadelphia, Pa.

All these reports and evalautions are presented in such a manner as to give a misleading impression that krebiozen was thoroughly, scientifically, and honestly tested by authoritative institutions and found worthless. The American Cancer Society paper gives not the least indication that any of these reports and evaluations have ever been challenged nor of the circumstances surrounding them though it has in its possession evidence showing how much of pressure, prejudice, and dishonesty went into their writing.

We present the facts in these matters. They are supported by uncontroverted documentation and testimony given under oath.

(a) "The Status Report of the Committee on Research of the Council of Pharmacy and Chemistry of the AMA" dealt with 100 cases allegedly treated with krebiozen.

One-fourth of this report—24 case histories—was forged. The secretary of the committee, Dr. Paul Wermer, and Dr. Henry Szujewski, a young Chicago physician then only 2½ years in practice, simply elaborated out of whole cloth fictitious clinical histories for these patients. They used the names and diagnoses of patients treated by another physician, who had been sent to Dr. Szujewski along with other patients for enzyme tests, and on this basis they fabricated 24 case histories denying any beneficial effects from krebiozen and stating that all these patients were dead or dying.

As a matter of fact, these 24 patients were the patients of Dr. Wm. F. P. Phillips, one of the coauthors with Dr. Ivy of the monograph "Observations on Krebiozen in the Management of Cancer." Dr. Phillips treated these patients with krebiozen, made full clinical records, and regularly reported his findings to the Krebiozen Research Foundation, and his reports on these patients are highly favorable.

When called as an adverse witness before the commission of the Illinois General Assembly investigating the krebiozen controversy, Dr. Szujewski admitted under oath that he had never treated any patient with krebiozen.

This falsification was discovered when the commission subpenaed the AMA file of krebiozen, and the patients identified. Ten of those declared dead or dying by the AMA in 1951, then in 1953 appeared before the commission and filed the following protest:

[1] Ivy, A. C., J. F. Pick, and William F. P. Phillips: "Observations on Krebiozen in the Management of Cancer," published by H. Regnery, Chicago, 1956.

[2] Ivy, A. C.: "Krebiozen: An Agent for the Treatment of Malignant Tumors: Investigation of Clinical Activity," Chicago, 1951.

"The Honorable WILLIAM E. POLLACK,
Chairman, Krebiozen Investigating Commission, Chicago, Ill.

"DEAR MR. POLLACK: We have learned that Dr. Paul Wermer of the AMA in his affidavit to the commission has referred to Dr. Henry Szujewski who indicated that the krebiozen patients whose blood was examined by him were dead or dying.

"We the undersigned were among those krebiozen patients and herewith certify that we are alive and in good health for over 3 years.

"We desire to point out that such a false report could be a source of serious embarrassment to us in our social and business activities. Accordingly, we desire to file our protest with the commission.

"Yours sincerely,

"Mrs. Julia Howard, 2427 Bernice Avenue; Cecile Luebkemann, 2442 Rosemont; Mrs. Catherine Firnstal, 6205 N. Oakley; Irene O. Kibby, 1830 North Byron Street; A. M. Howard; Eleanor Gahan, 1619 West Garfield Boulevard; Helen Arndt; Magda Johansen, 3810 North Roy Street; Evelyn Vogel, 1820 Nelson Street; Irene R. Pietrowicz, 3407 North Lowell Avenue."

Today, after 8 years, seven of these patients, all residents of Chicago, are free of cancer.

Of the remaining 76 cases dealt with in the status report, 40 were so close to death that they survived only long enough to receive two ampules of krebiozen. (The first two ampules are administered 72 hours apart.) Of the remaining 36 cases, 33 were so close to death that they received only four ampules of krebiozen. (Our patients have received an average of 80 ampules each.)

Excluding the 24 fabricated cases, the AMA report was based entirely on selected negative cases. Meanwhile, and this is very significant, the AMA had in its possession 140 clinical histories of patients treated in outstanding scientific and medical centers throughout the country, including six large university clinics and two world-famous medical centers. These reports were almost uniformly favorable to krebiozen, and had been supplied the AMA in ample time to be included in its Status Report, but the AMA did not include one of them. Thus, it is obvious that the AMA never intended that krebiozen be honestly and scientifically evaluated, but that its report was and is a smear report.

The statement in the American Cancer Society paper that the case records for the status report were examined at the request of Dr. Ivy and his associates at the Krebiozen Research Foundation is untrue.

It is ridiculous to say or to suppose that Dr. Ivy or his associates requested that phoney case histories should be reviewed or that they intentionally selected 100 negative cases, when our foundation had been regularly receiving favorable reports from some of the finest physicians in this country.

* * * * *

The records of the legislative commission show that an attempt to secure financial rights to krebiozen and control of its commercial exploitation preceded publication of the AMA's status report. These facts, taken from sworn testimony and written material accepted in evidence by the commission, were never denied under oath, though those concerned were given full opportunity to do so.

A group of businessmen headed by Mr. Edwin R. Moore, president of the Bell & Gossett Co., Morton Grove, Ill., attempted to use their acquaintance with the Durovics to gain financial control of krebiozen. It should be borne in mind that these individuals had in no way contributed to the development of the drug financially or otherwise.

They enlisted the aid of Dr. J. J. Moore, then treasurer of the AMA, who brought pressure on the Durovics to give the financial exploitation of krebiozen to these men. Dr. Moore had a very bitter discussion on this subject with Mr. Marko Durovic, as was testified to under oath by the interpreter Dr. Moore brought with him on this occasion. Subsequently, the Durovics were warned that the AMA would destroy krebiozen unless they made a financial arrangement with Mr. Edwin Moore.

When this warning was ignored, Dr. George Lull, secretary and general manager of the AMA stated to the press: "The American Medical Association has begun a critical study of krebiozen, the experimental cancer drug, and will issue a public report on its findings within the next 6 weeks."

Shortly thereafter, Franklin Bing, a former secretary of the AMA Council on Foods and Nutrition wrote to Dr. Ivy informing him that he would be ruined unless he offered the AMA for publication a letter stating "krebiozen has no value in the treatment of cancer." He offered Dr. Ivy a dubious recompense—let him first deny krebiozen publicly and then he might—if he wished—continue his research on it in secret. Probably no scientist ever received a more astonishing or cynical suggestion. Dr. Ivy refused. This refusal was the real reason why the Chicago Medical Society was stirred up to discipline Dr. Ivy. The formal reasons—those given to the profession and the public—were merely invented and were on their face ridiculous, as the then-president of the Chicago Medical Society tacitly admitted when he said the society's action against Dr. Ivy was a big mistake.

Thus the reason for the AMA Status Report on Krebiozen is apparent. It was never intended as a true evaluation of this drug. It had only one purpose, to destroy krebiozen, whatever the consequences to science and humanity.

The transcript of the hearings of the Illinois Legislative Commission investigating the krebiozen controversy contains the full record of this matter.

* * * * *

(b) As further evidence that krebiozen has been tested and found worthless, the American Cancer Society paper cites the "Report of the Committee on Cancer Diagnosis and Therapy of the National Research Council," chairmaned by Dr. Ira T. Nathanson, who was also one of the collaborators on the AMA's status report.

The American Cancer Society paper attempts to convey the idea that this National Research Council committee tested krebiozen. Actually, it did no such thing. It did not make a test. It only endorsed the forged report of the AMA. In 1954, Miss Isabella Wason, executive secretary of the committee, stated: "Dr. Ivy sent us krebiozen to use in clinical trials, but it was not used."

* * * * *

(c) The society's paper also refers to the committee of six physicians headed by Dr. Warren Cole and known as the Cole committee. The report of this committee presented as unfavorable to krebiozen but the American Cancer Society paper omits two salient facts: (1) that this report recognized that krebiozen has some activity in the cancer patient; and (2) that this report was composed of two parts, one of which contradicts the other. The "Summary and Conclusions," which is substantially negative for krebiozen, except that it recognizes its activity, was given wide publicity. The other part of the report, in which the evidence is analyzed, was marked "confidential," and was not published or released to the public until it was called in by the legislative commission. This part contains favorable evidence regarding the effect of krebiozen against cancer. Indeed, the conclusions of the report do not seem to follow the findings. Here is one example:

In the published part, in "Conclusions," the Cole committee report states: "We have been presented with no histological evidence by Dr. Ivy that the material produced degenerative or regressive changes in tumor cells."

In the confidential findings it is stated: "Microscopic slides were examined on nine patients, of whom six were included in the series of patients demonstrated to us. * * * We concurred in the diagnosis of all except one patient. In this patient we considered the slide following Krebiozen therapy was negative for malignancy instead of positive as reported to us. Accordingly this difference in opinion does not reflect disadvantageously on krebiozen therapy, but might reflect advantageously."

In this connection it should be emphasized that among the slides of the nine patients were, besides the case mentioned above, four others which were negative for malignancy. In other words, of nine patients in the diagnosis of whose slides the committee concurred, a total of five were negative for malignancy.

A fact worthwhile mentioning is that at the time the conclusions of the Cole committee were published, this report bore only the signature of its chairman, Dr. Cole. It was revealed at the legislative hearings that a plain signature sheet had been circulated to the other members, who signed without even reading the report.

* * * * *

(d) As fourth evidence which it seeks to use in establishing the ineffectiveness of krebiozen, the American Cancer Society paper quotes Dr. Stanley P. Reimann, director of the Institute for Cancer Research, Philadelphia, Pa., as saying, "We now know we have cured no patient [with krebiozen] and we don't believe the length of life has been prolonged on any we have treated." The files of the Krebiozen Research Foundation reveal that shortly after Dr. Reimann made this statement discounting the effects of krebiozen, we received a letter from the institute stating, "We have had quite a bit of pressure here, even to the extent that for the benefit of the press Dr. Reimann felt it necessary to make a statement that we were discountinuing any further extensive clinical evaluation of the material."

At the Lankenau Cancer Research Institute, under supervision of Dr. Reimann, 21 months of experimentation was conducted with krebiozen on 40 patients. The Institute presented a favorable report to the Krebiozen Research Foundation and to the Cole committee, which confirmed the Krebiozen Research Foundation's mounting accumulation of case reports confirming krebiozen's effectiveness. To show how warped is the view of the Reimann study of krebiozen as presented by the American Cancer Society, we quote in part from the Reimann report as it was given to the Cole committee for review:

"In view of these observations of biological activity of this material (krebiozen), we have been extremely interested in future possibilities of investigation. * * *

"Our conclusions on the material to date, though quite preliminary, are that it is nontoxic per se and has definite biologic activity specifically against tumor cells either directly or indirectly, of sufficient degree to warrant continued investigation both clinically and more important from the basic investigation of its mode of action with the hope that improvements may be made or some further knowledge concerning the biologic factors controlling tumor growth may be contributed. Since this represents the first and only nontoxic

chemical agent to show definite biologic activity of any degree against tumors of many types, it seems justifiable to encourage as much basic and clinical investigation as possible."

IV. REGARDING THE ATTITUDE OF NATIONAL CANCER INSTITUTE TOWARD A FAIR TEST OF KREBIOZEN PROPOSED BY SENATOR PAUL DOUGLAS OF ILLINOIS

The American Cancer Society paper ends by expressing the hope that the "Krebiozen Research Foundation, Dr. Ivy, and Dr. Durovic * * * will recognize the integrity of the National Cancer Institute" and calls on us as a matter of duty to accept its proposal for the testing of krebiozen.

This is a misrepresentation of the whole situation regarding our negotiations with the National Cancer Institute. We are and have been eager to cooperate with the National Cancer Institute in a test which will determine the merits—if any—of krebiozen. Unfortunately, the National Cancer Institute is unwilling to make such a test, despite public protestations to the contrary of its director, Dr. John R. Heller.

Since Dr. Heller has seen fit to tell the public and the Congress one thing while telling us another, we believe it our duty to present the record. The following is a summary of our conversations with the National Cancer Institute Director undertaken in an effort to implement Senator DOUGLAS' proposal for the testing of krebiozen.

The Krebiozen Research Foundation and Dr. Ivy accepted the proposal of Senator DOUGLAS and at his invitation, Drs. Ivy and Durovic met in Washington with Dr. Heller, other members of the National Cancer Institute staff and Mr. Frank McCulloch, the Senator's administrative assistant. This was on September 24, 1958.

At this meeting, it was unanimously agreed that the matter of giving krebiozen a fair test be explored further and Dr. Heller suggested that the committee proposed by the Senator be enlarged to include five members instead of three.

Believing this suggestion was made in good faith, Drs. Ivy and Durovic accepted it since Dr. Heller apparently found no fault with the testing procedure suggested by Senator DOUGLAS. Nor did he at that time appear to question the principle of a joint committee.

At our next meeting on December 5, Dr. Heller for the first time declared that the committee he envisioned must be independent and that for this reason could not include Dr. Ivy. Dr. Heller agreed, however, that Dr. Ivy might serve as its consultant.

But as soon as Dr. Ivy stipulated the conditions under which he would serve this committee as consultant, Dr. Heller introduced a new feature and changed the function of the committee entirely from that of a testing committee to a committee which would decide whether a test of krebiozen should be made or not.

He told Dr. Ivy in a letter of February 6, 1959, that prior to anything else the independent committee would have to examine the files of the Krebiozen Research Foundation and added:

"The committee could reach one of two major conclusions: (1) That the evidence of krebiozen's effects is insufficient to recommend further clinical test; or (2) that a clinical test is recommended."

In other words the goal of Dr. Heller's succession of changes was apparently to create a situation which would relieve the National Cancer Institute of testing krebiozen at all.

Thus, it is clear that in calling on us to comply with the conditions laid down by the National Cancer Institute for the testing of krebiozen, the American Cancer Society is not advocating a test. What it is really asking is that we agree to accept as final, the opinion of still another committee.

If a sincere desire exists to determine the truth about krebiozen, why should Dr. Ivy be excluded from such a committee?

Dr. Ivy, formerly executive director of the National Advisory Cancer Council and also a former director of the American Cancer Society, is an outstanding scientist, world-famous as a physiologist and author of hundreds of scientific papers. He represented world medicine as an expert witness at the Nuremberg trials on the subject of medical ethics and clinical investigation. Even his adversaries recognize that his integrity is unquestionable.

Dr. Ivy has experimented with krebiozen for nearly 10 years. He has more knowledge of the dosage rate and the effect of the drug on various types of tumors than anyone else. In a committee of five, he would have only one vote, which could certainly not be decisive.

If Dr. Ivy had been a member of the AMA committee which prepared the status report on krebiozen, the falsification and superficiality exhibited in this report would have been impossible.

If Dr. Ivy had been a member of the committee on diagnosis and therapy, this committee could never have issued an opinion indicating that it had tested krebiozen when in fact it had not done so.

As a member of a committee to evaluate krebiozen, Dr. Ivy would at least safeguard the objectivity of its findings and guarantee their honesty.

If there were nothing else, the American Cancer Society paper in itself is evidence enough that some such guarantee is needed. In this connection we cite Senator DOUGLAS' reply to receipt of a copy of the American Cancer Society "Background Paper on Krebiczen," sent him by Dr. Diehl. We quote:

"Thank you for sending me a copy of the Cancer Society's background paper on krebiozen.

"With the final conclusion, that there should be a fair test, I obviously concur. That is what I have been urging right along.

"Perhaps it is a service to the efforts in this direction to have the summary you have made available.

"But I must respond in all frankness that your memorandum, if intended to be impartial, seems to me seriously deficient in several respects:

"(a) It refers to the results of the tests of Drs. Kirk and Furst (pp. 7–8), but takes no account of Dr. Ivy's rather devastating answer, a copy of which is enclosed;

"(b) It refers to the adverse findings of the AMA group, Dr. Reimann and the Cole Committee (pp. 8–10), without recognizing the critical analysis or rebuttals of these conclusions;

"(c) It gives a fleeting mention of the publications of Drs. Ivy, Pick, Phillips, and Krasno, without either identifying the publications or suggesting the general nature of their findings;

"(d) It makes no reference to the widespread treatment of patients in the intervening years and to the developing number of cases in which some positive results of treatment with krebiozen have been observed. Some of these case histories, or brief summaries of them were given to Dr. Heller and his associates at the conferences you mention. Others were released in connection with the testimonial dinner to Dr. Ivy in February—when a number of patients who have apparently had amazing results from the treatment were on hand with their doctors;

"I do not assert these cases are a substitute for a fair and scientific test. I only suggest that the omission of any reference to them makes your selection of data for the memorandum appear quite one-sided;

"(e) It sprinkles the words 'propaganda,' 'promotion,' 'alleged,' 'ostensible' sufficiently through the text to give a rather hostile coloration to it all.

"In short, I regret that the memorandum is not more complete, better balanced and more objective. These deficiencies, I fear, no matter how unwitting, may do more to aggravate the fears and suspicions of prejudice that have made it difficult to reach a basis of agreement on a fair test.

"I end as I began by repeating my hope that we can somehow maximize the possibilities for the desired test—and not be content with rubbing salt in old wounds.

"I shall send a copy of this letter to Dr. Heller so that he may share the knowledge of my reactions to a brief reading of your memorandum."

Our answer shows why the American Medical Association, the American Cancer Society, and the National Cancer Institute—all of which have refused this test—are now insisting that we accept their alternative—a test by a so-called independent committee.

The record of organized medicine's opposition to krebiozen, which has been outlined in this, our answer to the American Cancer Society, shows plainly that such a committee would be far from independent. Even if the physicians composing it were themselves not prejudiced against krebiozen, they would be subject to outside pressures which in the past did not scruple to bring false witnesses against krebiozen; organizations using their power and influence to hold into line men whose very careers depend on compliance.

Obviously, these organizations cannot admit at this late date that the campaign against krebiozen, Dr. Ivy, and his associates, begun by the American Medical Association in 1951 and carried on since by these other arms of organized medicine was mistaken; that persecution and falsification have been invoked to nullify a genuine scientific effort in the cancer field.

This would be demonstrated beyond any doubt should krebiozen be proved of value in the treatment of cancer via the double-blind test, where prejudice—for or against—is excluded by the very nature of the test. Hence the refusal of the American Cancer Society to subject krebiozen to this time-honored procedure.

Their real aim is to once again discredit krebiozen without performing any test.

This is the reason behind their demand for an independent committee to pass on the patients' records of the Krebiozen Research Foundation, in fact, to avoid a test.

We submitted our file of 140 cases (all that we had at that time) to the AMA in 1951. The AMA did not use these records. Instead, they preferred to falsify 24 cases for their 100-case report. In 1953 we submitted to the Cole committee for evaluation our file on 500 cases, which were mostly favorable for krebiozen. The Lankenau Cancer Institute submitted 40 cases to the same committee; the Tumor Clinic at Marquette University submitted 4 cases; 13 patients who were free of cancer after krebiozen treatment were brought before this committee. All the Cole committee could determine from these highly favorable presentations was that the substance [krebiozen] was not entirely devoid of biological activity.

If we now submit our file to another committee controlled by the same people their attitude toward krebiozen and our past experience would suggest that the only thing which could be expected would be the conclusion that krebiozen does not merit a further test.

However, the Krebiozen Research Foundation has offered to submit its file to an arbitration type committe, once it has been agreed that this committee will perform the test suggested by Dr. Ivy and Senator DOUGLAS. At the same time the Krebiozen Research Fonndation will be glad to present to the committee corresponding patients together with their physicians. We would then urge the committee to study our records as well as those on which the 100 case report of the AMA was based and of which

we have photostatic copies. But to give our patient records to a loaded committee in advance of any agreement to test krebiozen would simply be to write krebiozen off.

It is significant to point out that most of the records of the Krebiozen Research Foundation are summarized in the monograph "Observations on Krebiozen in the Management of Cancer," published in 1956. This publication which is highly positive for krebiozen of itself would be enough to indicate the value of krebiozen and justify its further exploration and perfection. This publication was sent 3 years ago to all of these organizations and has been deliberately ignored.

CONCLUSIONS

(1) All of the arguments supporting the negative stand of the American Medical Association, the American Cancer Society and the National Cancer Institute toward krebiozen are based on the AMA Status Report of 1951.

This report was based on partially falsified material and on completely superficial and misleading data. (See pp. 19–22).

Therefore, this report does not have the most elementary requisite of an honest presentation and cannot serve as a scientific basis for the evaluation of krebiozen.

(2) Meanwhile krebiozen has been tried clinically by three independent groups on a total of some 1,500 terminal cancer patients.

(a) Dr. Ivy and his group of collaborators in Chicago experimented the material on about 250 cancer patients.

(b) The Lankenau Cancer Institute, Philadelphia, tried the material on 40 patients.

(c) More than 300 physicians in hospitals, university clinics and medical centers throughout the country tested krebiozen on more than 1,200 patients.

This work was directed by the Krebiozen Research Foundation, Chicago, under the scientific direction of Dr. Ivy and all data regarding these cases are in the files of the Krebiozen Research Foundation.

All three of these groups concluded:

(a) That krebiozen showed beneficial activity against cancer in 70 percent of treated cases. To date, the Krebiozen Research Foundation can show some 52 previously terminal cases which are free of detectible cancer for the past 3 to 8 years.

(b) That krebiozen is not toxic.

(3) The impossible situation of sustaining a negative stand against an apparently active anticancer agent and withholding it from cancer sufferers on the basis of falsified data from 1951 and without taking into consideration truthful data obtained before and after, is unprecedented and cannot be tolerated.

We respectfully call on the National Cancer Institute to accept the proposal made by Senator DOUGLAS for a fair test of krebiozen in order to settle the controversy over this drug so that if it is active, as we consider it to be, it may be put at the disposal of cancer sufferers.

J. F. PICK,
Secretary, Krebiozen Research Foundation.

Chesapeake and Ohio National Historical Park

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. SAYLOR. Mr. Speaker, Supreme Court Justice William O. Douglas recently urged the conservationists to mobilize and fight to save the Chesapeake & Ohio Canal property from destruction.

These prophetic words from a member of the U.S. Supreme Court should sound an ominous warning to everybody interested in preserving the C. & O. Canal as the Chesapeake and Ohio National Historical Park.

A recent article in the American Forests, by Daniel A. Poole, points up the importance of the C. & O. Canal fight.

THE C. & O.—PARK OR PARADOX

(By Daniel A. Poole)

Conflicts arising between national parks and reservoirs are more notable for the vociferous public reaction that is generated than for the number of times parks actually are threatened by water projects.

There has developed over the years an unwritten and widely accepted policy that puts national parks off limits to water developments. This policy was fashioned for the most part on the omnipresent anvil of public willingness to forge forces to combat the developers whenever a national park unit is linked with a water project.

This time-tested policy now is receiving a thorough plumbing in Washington where, for the third year, a congressional committee is holding hearings on proposals to give national historical park status to the old Chesapeake & Ohio Canal, which skirts the Potomac River along the Maryland shore. A similar proposal cleared the Senate in 1957. Its death in the House the following year climaxed lengthy hearings that carried into the closing hours of the final session.

The major questions that have emerged from the many days of hearings and many pages of recorded testimony, and which still are unresolved by the committee, present something of a paradox. Would Congress in the face of this unwritten but enforceable policy, cut off metropolitan Washington's source of future water supply if it creates the national historical park? If the Congress refrains from acting merely on the supposition that an economically justifiable water storage impoundment might be recommended for the Potomac near Washington, would all chance of obtaining an adequate park be sacrificed? Or, in recognition of both of those dangers, however nebulous, can Congress write a bill that logically and clearly establishes suitable safeguards for both Washington's water supply and the park?

Those who oppose the historical park and who confess immense interest in Washington's water future actually are professional people employed by rural electric associations and power-producing cooperatives. Park boosters range from traditional national conservation organizations to civic, sportsmen's, nature, and women's associations, and other community groups in Maryland and the District of Columbia.

The C. & O. Canal seldom fails to evoke both surprise and pleasure in those who view it for the first time. From its beginning in Georgetown, a short distance west of the White House, to its end in Cumberland, some 180 miles distant, the canal is a wooded strip of refreshing wildness. Giant sycamores, tulip poplars, oaks, and limber limbed maples isolate it from the world's most important city; and, as it rounds bluffs along the shallow river's edge and cuts inland across alluvial elbows, the canal is a narrow and natural wonderland of forest and water.

The waterway emerged from the successful organization in 1828 of the C. & O. Canal Co., which hoped to promote commerce from Washington to points lying between and beyond Pittsburgh on the Ohio River. Interest in trade with the American West of that era had prompted George Washington to form the Potomac Co. in 1785. The company set to work clearing obstructions in the river channel and constructing a short canal on the Virginia shore to bypass impressive Great Falls, some 14 miles upstream from the city. That first canal failed Washington's expectations, but it led to the support of the larger, more ambitious C. & O. project.

Initiated by President John Quincy Adams' shovel of dirt, the first 22-mile stage of the canal was completed in 3 years. Hampered by repeated delays and increased construction costs, the company finally pushed the canal to Cumberland in 1850, but not before the decision was made to call off plans for continuing across the Alleghenies for connection with Pittsburgh.

As many as 540 barges were in use on the canal in the late 1870's when active commerce was at its peak. Measuring 92 feet long and 14½ feet wide, the mule-powered barges carried 110 to 120 tons of cargo, plus the crews, family members, and spare mules. The bulky boats were raised 605 feet between Georgetown and Cumberland through 74 locks.

Purchased by the Government in 1938, the canal, including towpath, seldom ranges more than 150 feet wide, and only 5,253 acres are within the narrow 180-mile right-of-way. Locks, lockhouses, and the canal bed and towpath have been restored along the first 22 miles between Georgetown and Seneca. Other monuments to early engineering skill and imagination, such as tunnels and aqueducts, remain, although in need of repair in much of the upper section of the canal.

No longer in sight are the blunt-prowed barges that once hung heavy against towlines. In their place graceful canoes glide the waterway, seldom loaded with anything more serious than a picnic lunch or gleeful youngsters. Depending on the season, thousands of hikers, bird watchers, cyclists, fishermen, horsemen, ice skaters, and others now enjoy themselves, only faintly mindful of that distant day when mud-covered mules stoically slogged endless miles back and forth along the towpath.

Once a business enterprise, the C. & O. Canal now is a recreationist's paradise. And happily so, because Washington and its burgeoning suburbs are direly in need of healthful and relaxing outdoor playgrounds. In Washington and in some upriver towns, the canal is just across the street, enclosed in a cathedral of towering trees, and flanked with dogwoods and other understory flowering plants. For many thousands it is seldom further than a bus or trolley ride. And to those who can take the time, limited access points throughout its length place the canal and the adjacent river within a convenient distance for upward of 5 million persons.

At its recent hearing in March, the Public Lands Subcommittee of the House Interior and Insular Affairs Committee considered testimony on four bills, each related in some way to the historical park proposition.

Bills by Representatives JOHN P. SAYLOR of Pennsylvania and JOHN R. FOLEY of suburban Maryland, H.R. 953 and H.R. 2331, focus directly on the park, with the Foley bill containing an added proviso to the effect that the historical park should not bar water projects that might be authorized by Congress at some future time. Conservationists contend that the proviso gives Congressional recognition to Washington's water supply situation and gives some measure of comfort to those who fear for it. One Congress cannot bind another, however, and in practice the proviso is a statement of intention to serve as a guide to some future Congress which could authorize a dam in any of the national parks if it so chooses. These two bills, H.R. 953 and H.R. 2331, are supported by park enthusiasts throughout the country.

Two other identical bills, also before the subcommittee, contain both that proviso and a more specific reservation of 35 miles of the canal for a large impoundment at River Bend dam site, about 15 miles upstream from Washington. These bills, H.R. 5194 and H.R. 5344, by Representatives FOLEY and RICHARD E. LANKFORD, of Maryland's Eastern Shore electric cooperative region, also would prohibit expenditure of any funds for recreation development within the area of the proposed dam. The District of Columbia Commissioners and the Secretary of the Army, acting for the Corps of Engineers, also would be given veto power over the National Park Service's plans for development and improvement of the entire canal project.

All four bills would enable the National Park Service to acquire up to 15,000 acres of land, minus the present holdings, for expansion of picnic and camping areas, access roads, parking lots, and for the protection of historic locks, lock houses, aqueducts, and tunnels.

Because of these two sets of widely divergent proposals, the park no longer is the principal issue. At issue are the reservation and escape clauses that the rural electric groups hope to get into the park authorization bill. That is, if a bill should be enacted. Its opponents clearly view the park proposal as a threat to their hoped-for TVA-like development of the Potomac Basin. They know the public's insistence that water development and national parks be segregated and are making a test case of their doctrine of multiple uses for the Potomac Basin. The C. & O. Canal bill is merely the vehicle that has been chosen for the test.

Rural electric cooperatives, by law, have preferential use of power that may be generated at Federal dams. The cooperatives' position on the park project was brought to the surface during the House hearings last year, when a committee member asked whether the cooperatives would support or oppose the bill seeking to create the historical park if the Army engineers recommended that no hydroelectric power be developed on the river.

The reply was that the cooperatives' position in that event would not be clear. "Our basic interest," the witness continued, "* * * is in the hope that the Corps of Engineers will favorably report upon the feasibility and desirability of including hydroelectric power in the river if it is developed."

The witness also declared that if the cost of the power delivered to the cooperatives from any dam was more than what the cooperatives presently were paying for other power, they would want "none of it." At this year's hearings, an Army engineers spokesman said that any power that might be developed at River Bend Dam would be incidental.

According to the Washington Evening Star of March 4, 1959, Representative FOLEY's second bill was written and handed to him for introduction by staff aides of the House Interior Committee. The article continued, "Staff members seldom draft such controversial legislation without explicit approval of the committee chairman—in this case, Representative ASPINALL, Democrat, of Colorado.

"Mr. ASPINALL traditionally has been sensitive to the need for long-range planning to protect the Nation's water resources."

Representative SAYLOR, a recognized champion of the national parks, characterized the Foley-Lankford bills during the hearings as "fifth column." The blunt-spoken Pennsylvanian, who was given a national award by major conservation groups last year, charged that the identical Foley-Lankford bills were drawn up by persons who for years have been trying to figure a way to open national parks for water development projects.

Under committee examination, the park opponents found the reservation in the Foley-Lankford bill for an impoundment at the River Bend site difficult to defend. River Bend Dam once figured prominently in planning for Potomac River development. It again is being rumored as the prime recommendation in a new Corps of Engineers study of the basin. There are no signs that the public is ready to accept such a recommendation and the chances for its approval in Congress are dim. Hence the effort in the Foley-Lankford proposal to obtain indirectly what might be called a tactical advantage by reserving the dam site for a dam that may never be built is nebulous at best.

Park supporters have pointed out time and time again that the canal property already is owned by the Federal Government and is being administered as a unit of the national park system. Merely elevating its status to a national historical park, it is argued, has little actual import on the question of whether a large dam which might flood a great part of the park can be built on the Potomac. Should such a dam ever be recommended, conservationists say, its authorization will have to be resolved at that time and not now. The dam and its effect on the canal would be only one of the many facets that the Congress and the public would have to investigate thoroughly.

Public opinion scuttled River Bend Dam in 1929 and 1938. It was exhumed in 1946 when the Corps of Engineers filed a proposed Potomac development plan with Congress which boasted a 14-dam complex on the main river, beginning with River Bend and working upstream into tributaries in Virginia and West Virginia. The Corps of Engineers never did approve its own 1946 plan, however.

While the rural electric cooperative groups oppose the park plan because of a relationship which they say will jeopardize "multiple use" development of the basin, other less-vigorous objection to the park rests on its alleged threat to metropolitan Washington's water supply. There is a wide and understandable diversity of opinion as to the future water needs of metropolitan Washington. Population growth, per capita water consumption at some future date, and water flow expectances in the Potomac all enter into the arguments. Some state that the expected cyclic return of low flow to the river would be insufficient to provide raw water for purification and still leave enough in the river as it flows past Washington to flush pollution downstream from that point. Others say that the lowest flows ever recorded in the Potomac in 1930 exceed by 22 percent the maximum estimated need for the year 2000 as anticipated by the Sanitary Engineer's office for the District of Columbia.

Some argue that a satisfactory source of fresh water is the 25-mile stretch of the Potomac lying between Washington and Indian Head, Md. With proper pollution abatement and treatment facilities in Washington, the proponents of this plan say, a pumping and distribution system, plus purification plants, would yield about 52 billion gallons of water.

The Army engineers presently are restudying the Potomac Basin under a 1956 directive of the Senate Public Works Committee. The engineers have not been successful in obtaining appropriations and, under the circumstances, their final report most likely will not get to Congress until the late 1960's, at the earliest.

This fact seemingly makes support for the River Bend Dam reservation in the Foley-Lankford bill even more indefensible. Any large impoundment that might be construced on the Potomac near Washington, in the normal course of events, would not be initiated until well past the mid-1970's. And many hurdles lie in the way of Federal dam construction. A dam must be recommended, accepted both by the public and Congress, authorized, and funds provided for planning and construction before actual field work begins.

Congress has been given a strong answer to the park paradox. At the 1957 Senate hearings, at last year's House hearings, and again this year, the spokesmen for the Army Corps of Engineers, the Commissioners of the District of Columbia, and the National Park Service have testified for the record that the proviso in H.R. 2331, which specifies that the historical park should not bar future water development, adequately safeguards metropolitan Washington's water supply.

With reference to specific reservation of land for the River Bend Dam, a corps spokeman said, "We feel in preliminary studies that considerable storage is going to be required. Whether it will have to be on the main stream or whether it can be placed on the tributaries, we are not yet prepared to say."

A spokesman for the District of Columbia's sanitary engineering office also said, "There may be considerations when all of the facts are known which would make a nearby impoundment impracticable financially or otherwise."

Lands that would be acquired for park purposes within the reach of River Bend Dam never will be less expensive than at present. Urban developments are pressing close to the canal in some sections, and the land prices probably never will be cheaper. Should River Bend Dam ever be authorized and built, the land that is acquired now for the historical park would be turned over for the impoundment. It is entirely possible that the land savings alone would more than offset the nominal costs of access roads, parking lots, trails, and picnic areas that the National Park Service proposes in the contested area. If the world's richest nation can afford to pay more than $1 million daily for storage of surplus agricultural products that never will be used, park supporters reason, there should be little objection to investing a few thousand dollars in modest recreational features for the canal historical park.

Recreational opportunity is needed now. It appears unreasonable to ask that the people delay their recreation for 15 to 20 years simply because some persons fear that creation of the historical park would block access to a water supply that metropolitan Washington might need at some future time. The bill that has been introduced, H.R. 2331, already makes provision for that eventuality.

In the face of this overwhelming unanimity, the Chesapeake and Ohio Canal National Historical Park is not paradox; it is a must.

Library Extension Service in Rural Areas

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. MORSE. Mr. President, the American Library Association has brought to my attention the May issue of the Wilson Library Bulletin, which is entirely devoted to the story of library extension service in rural areas. It con-

tains an appraisal of the progress that has been made as a result of the Library Services Act of 1956.

It is rewarding to know that good library service is gradually being developed in rural areas of the United States. One of the special features in the Bulletin is an article about Oregon's library program, written by Eloise Ebert, State librarian of the Oregon State Library at Salem.

In this article is a quotation I should especially like to share with my colleagues. The quotation is one from Ranganathan which likens the library to a river:

Library is like river. The water in the sea gets distilled and transferred to land; river collects it and feeds most of it back into the sea. So it is with library. The thought in the mind of man gets expressed and recorded; library collects it and feeds most of it back into the mind of man. This is an ever-lasting cycle. New uses are found for river—irrigation, navigation, hydraulic power, and so on; even so, an ever-increasing use is found for library. New canals are led out of river, and a river system is formed; even so, library is diversified, and library system is formed to serve an increasing purpose.

In her concluding paragraph Miss Ebert comments on this quotation. She writes:

To establish new library systems can be as earth-shaking as the digging of canals for a new river system. All parties concerned may have different ideas as to where the canals are to be placed, how deep and wide they should be, what legal limitations must be adhered to, and once the river system is established, how it will be developed to serve its many purposes. We are digging new canals in Oregon.

Mr. President, I ask unanimous consent that the article entitled "The New State Grant Program," written by Eloise Ebert, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NEW STATE GRANT PROGRAM

(By Eloise Ebert)

This is section 1 of the bill passed by the Oregon Legislative Assembly of 1957 which culminated years of effort of members of the Oregon Library Association, the State library staff, and many library friends. The key to its success was William J. Griffith, library development chairman, and Mrs. Eugene Kelty, a dedicated library lobbyist who had formerly been a member of the State legislature. It was to be the beginning of intensified demonstrations, projects, and activities to encourage library cooperation.

A total of $154,078 was appropriated for the 1957–59 biennium to provide minimum funds required to match a $5 million congressional appropriation under the Library Services Act. The Oregon State Library board of trustees adopted the following goals to be considered in approving awards: the promotion of general understanding of what constitutes good library service, the establishment of adequate service to unserved or inadequately served areas, and the inauguration of modern services now lacking.

The Rural Library Services program in Oregon can be roughly divided into two parts—services and activities carried on from the State library, and development projects in the field to be administered locally under a grant-in-aid. Areas requesting a project grant were not required to have voted any new of additional county or multi-county tax to become eligible. This was due to a legal stumbling block to library development in Oregon known as the "6 percent constitutional tax limitation." This limitation meant that no local tax base could be increased by more than 6 percent of the amount levied in any of the 3 preceding years without a special vote. Such an unrealistic limitation has necessitated placing special library levies on the ballot in almost every instance. Local budgets were adopted before final action was taken by the Oregon Legislature and the U.S. Congress, so it would have been almost impossible to have made new local funds a requirement for a local project.

OBJECTIVES AND MEANS

Policy is defined as a series of objectives which a governmental body strives to attain and the means which it consciously plans to use in the pursuit of these objectives. The people in Oregon are agreed on the desired objectives of a library development program; it is the means upon which they disagree. Agreements between the State library board and the respective jurisdictions were drafted and redrafted. The attorney general, district attorneys, city attorneys, county courts, city councils, library boards, librarians and the State library staff all got into the act. Some asked "What do you mean 'seek to encourage the continuance of library service established'? We do not like 'shall utilize our resources to supplement bookmobile service to rural residents.' 'Shall' must be changed to 'may.'" Budgets for the projects were part of the contracts; and local budget committees checked, criticized, amended, and scrutinized each item. Salaries suggested according to State civil service salary schedules were too high. Some county clerks were not agreeable about assuming the extra work load for local accounting, and quick adjustments were necessary to add to their salaries.

The press was not unanimous in its support of the local projects. While not actually opposing books and reading, the editors were not convinced that this Federal-State grant-in-aid program was the best way to improve library services. One editorial captioned "What you pay for libraries: That 'match money gimmick'," referred to this program as a "thing of horror." Another editor in an adjoining town retorted: "If there is a gimmick as they put it, in the match money program, we regard it as a darn good one. In this age when learning and education are of perhaps greater importance than ever, especially in the field of science, this program certainly is of real value. Even aside from this, it is important because it is an opportunity which should not be denied the small town or country boy or girl, man or woman simply because they can't afford to do it on their own. Let's forget the almighty dollar long enough to remember the value received but if you can't, just stop and consider: it is the rural folks' tax money too, not only the city dwellers which pay for governmental expenditures. They often are helping 'foot the bill' for benefits received by townspeople."

Five different field projects were approved covering the gamut from cooperative cataloging, bookmobile demonstrations, to a tri-county regional demonstration. Project directors are now preparing budgets for the 1959–1960 fiscal period when Federal-State funds will diminish and local budgets will need to continue the services. Whether the demonstrations will become permanent and maintain the same level of service still remains to be seen in Oregon. The Oregon Legislative Assembly now in session will undoubtedly appropriate matching funds to continue the rural library services program. The State library in its budget requested funds to match the anticipated $7,500,000 congressional appropriation but this was reduced by the budget division to match $6 million. The library development committee of the Oregon Library Association will work to secure the full amount of matching funds.

Oregonians would understand Ranganathan when he says:

"Library is like river. The water in the sea gets distilled and transferred to land; river collects it and feeds most of it back into the sea. So it is with library. The thought in the mind of man gets expressed and recorded; library collects it and feeds most of it back into the mind of man. This is an everlasting cycle. New uses are found for river—irrigation, navigation, hydraulic power, hydroelectric power, and so on; even so, an ever-increasing use is found for library. New canals are led out of river, and a river system is formed; even so library is diversified, and library system is formed to serve an increasing purpose."

To establish new library systems can be as earth shaking as the digging of canals for a new river system. All parties concerned may have different ideas as to where the canals are to be placed, how deep and wide they should be, what legal limitations must be adhered to, and once the river system is established, how it will be developed to serve its many purposes. We are digging new canals in Oregon.

World Battle for Trade and Jobs

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. KEFAUVER. Mr. President, American industry is pricing its goods higher and higher. In many cases this has priced us right out of the world market.

This most serious economic problem is highlighted in an excellent series by Charles Lucey, Scripps-Howard staff writer.

I think this series is an outstanding public service, and I ask unanimous consent that the Lucey article, which appeared in the Washington Daily News on May 19, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WORLD BATTLE FOR TRADE AND JOBS—UNITED STATES IS PRICING ITS GOODS TOO HIGH, EXPERTS CONTEND

(By Charles Lucey)

That 20th century wonder, the vaunted U.S. industrial machine, is running head-on into trouble in world markets because—time and again—it's pricing its goods too high.

Not always but often enough to mean the loss of thousands of American jobs.

From his desk here exporter Frederick R. Pinter picks up a letter:

"Sale of clutch plates and parts has slowed for various reasons," a Brussels agent writes. "First, the number of American autos diminishes more and more in Belgium, making inevitable a reduction in spare parts. We also feel more and more the competition from European manufacturers, whose prices are far lower than American prices."

FIFTY PERCENT LESS

A Mexico City agent reports sales woes—"because most of my clients are importing Japanese parts selling more than 50 percent lower than American products." Still another letter tells of sales lost to Germany in power transmission equipment—United States bids too high on every one of seven items.

"American products are better," says Mr. Pinter. "Often overseas buyers will take them even with a 10 percent price difference—but at 25 percent it's hard to compete. How can we compete and constantly raise prices? We like shorter hours, yes, but it cannot be done against the Germans and others."

Says Joseph Rizzo, veteran foreign trader: "We've priced ourselves out of markets all over the world. We cannot compete pricewise in machine tools. It's the same with grinding wheels in the abrasives industry, yet once we were large exporters. The thing hurting us in Europe is the lower wage differential."

RECORD CITED

Says William R. Herod, president of International General Electric:

"Our records indicate the spread between United States and European industrial wage rates although narrowed slightly recently, is far greater today than 45 or 50 years ago. Before World War I, for example, British rates were 60 percent of ours—today, only slightly over 30 percent.

"On those items in which labor is a substantial cost element—'built' goods as against mass-produced goods—our competitive position is worsening.

"The United States has been favored by tremendous technological leadership. Where we continue to have this leadership we can continue to compete successfully. Our job is to stay ahead technologically—we cannot do business in the same old way at the same old stand with rising U.S. costs."

Notes Adolph Auriema, head of an important export-import business:

"Every time there's a wage increase, prices of the product go up in the same percentage, and not merely enough to cover the wage increase. The more labor goes up, the more profits go up. This means in many cases we are pricing ourselves out of foreign markets."

CAUTION

But in discussing this tendency, he cautions against being too general: He says U.S. technology and mass output can accomplish much. And he notes that foreign wage rates tend to catch up with ours.

Yet Mr. Auriema agrees some U.S. prices are climbing so high foreign products now can hurdle our tariffs and still compete here; He cites electronics with the Japanese underselling us by 30 to 35 percent, as an example.

Wages aren't the only element in high prices. Big government spending which helps breed inflation, heavy taxes which shove up costs—these contribute. Corporate profits likewise—and they hit an alltime high in the first quarter of 1959, in some instances double those of a year earlier.

The U.S. record in inflation is as good or better than in European industrial countries in recent years; wage rates have risen faster in England, France, and Germany. But wage levels there started from so much lower these countries still have immense advantage. And already they've begun battening down the hatches—British wage jumps last year were only half those of 1957.

John F. Smith, Jr., president of Inland Steel, reports average 1957 hourly steel workers' wages at 89 cents in Luxembourg, 78 cents in Belgium, 68 cents in Germany, 41 cents in Japan—and $2.92 in the United States.

THE REAL TEST

In considering wage rates, the real test comes in unit costs of the product made. This means productivity—bringing high-speed, automated machinery and U.S. mass output to bear on manufacturing costs. But America no longer has exclusive copyright on modern industrial performance.

The gap narrows—and this means low foreign wage rates, once easy for us to offset, spell trouble today. And it's relevant that U.S. wage increases have been outrunning output per man-hour—a sure route to inflated prices.

The National Industrial Conference Board, in a considerable study, found unit costs higher in some world areas than in the United States. But in the Western European nations challenging America industrially, they were lower in 55 of 85 instances. This, despite the fact that raw materials costs are higher there—sometimes even double.

From J. Wilner Sundelson, Ford Motor International, comes the view that European production will indeed be as efficient as ours, and that lower wage rates where they do not reflect differences in productivity means underselling the United States.

All this isn't something happening thousands of miles away—it has direct and swift bearing on U.S. factories making autos, electronics, sewing machines, typewriters, textiles, certain kinds of steel, machine tools, those easy post-World War II days when "Made in U.S.A." was a magic symbol are now as far away as the Middle Ages.

The Forlorn Hope

EXTENSION OF REMARKS

OF

HON. THOMAS H. KUCHEL

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. KUCHEL. Mr. President, today the Washington Daily News had an excellent, and I think very relevant, editorial on the overdue enactment by the Congress of labor reform legislation. The editorial is entitled "The Forlorn Hope."

It indicates, on the one hand, that organized labor is against the recently adopted labor bill on the part of the Senate, and that the United States Chamber of Commerce and the National Association of Manufacturers are likewise opposed to it—however, for different reasons.

I think the forlorn hope represents the thinking of the great majority of the American people in this highly important field, and I ask unanimous consent that the text of the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FORLORN HOPE

Representative HALLECK, of Indiana, the Republican leader in the House, came out of the White House Monday and reported he had told the President there is only "a forlorn hope" of passing labor legislation at this session.

Mr. HALLECK's appraisal was based on his knowledge of the House Labor Committee, now entrusted with whatever chance there is of producing a bill to protect the members of unions, and the public, from the union bosses—Jimmy Hoffa being a star example.

This committee is so splintered in its views that Mr. HALLECK sees little prospect even of a compromise. The conflicting views, all rigid, reflect the heavy outside pressure on Congress.

The United States Chamber of Commerce and the National Association of Manufacturers are opposed to the Kennedy bill (which passed the Senate 90 to 1) because it doesn't go far enough. The AFL–CIO is opposed to the bill because it goes too far. Hoffa and John L. Lewis frankly want no bill at all.

All of these groups maintain aggressive lobbies at the Capitol.

This, as much as anything, explains the dim prospect for any legislation which attempts to give the unions back to their members.

It is the old story of Congress listening to the voices nearest and loudest. The great majorities this legislation is intended to protect virtually are ignored in the infighting now going on over this issue. The public has no well-heeled lobby.

A statesmanlike Congress would heed none of the boisterous voices, but would have the courage to write a bill to safeguard the public interest.

The Christian Amendment Movement

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. REES of Kansas. Mr. Speaker, under permission granted by the House, I am including one of a series of 13 radio programs prepared by Dr. R. J. G. McKnight, of Pittsburgh, Pa. Dr. McKnight is a scholar of the first rank, and his record is told in "Who's Who in America," also in "World Biography." He has made a specialty of studying the Christian philosophy of civil government, and he brings the fruit of his study to these programs.

The article follows:

It was pointed out in the preceding period that our leaders in national affairs after the Revolution began to abandon the colonists' conception of God in relation to nations and governments. They established the doctrine of separation of church and state. In that respect they did right.

Both church and state are divine institutions. Both come from the hand of God. God has never relinquished His claim to sovereignty over either state or church.

A state or nation is a spiritual entity. It is a moral being. It has moral obligations. The first of these moral obligations is to acknowledge the source of its authority. And the source of a nation's power is written down plainly in God's Word—the Bible. For example, if an officer of the law arrests a motorist, the motorist has a right to ask the officer to display his badge. The officer must have something to show that he has the authority to arrest the motorist. So Paul says: "Let every soul be subject unto the higher powers. For there is no power but of God: the powers that be are ordained of God. Whosoever therefore resisteth the power, resisteth the ordinance of God" (Romans 13:1,2).

No nation or court of law has the right to sentence a murderer to die unless it has back of such action the authority of God. God alone has the power of life and death. God does delegate this power to properly constituted agencies of government. But the murderer must have his day in court. And the court must also show that it is acting according to an ordinance of God.

God is a God of order. Without order there must be chaos. "God so loved 'the cosmos' (John 3:16, Greek) that He gave His only begotten Son" to reestablish the order as it was before. The order He had established was disrupted by sin.

We are living in a world that is in chaos, economically, politically and morally. We have trusted in blind leaders, and we have fallen into the ditch. We have hewed out for ourselves cisterns that can hold no water, and the race is perishing.

Thinking men everywhere are looking for some solid basis on which to build the foundations of society. Some (and they are all too few) have recognized that all the ills of society spring from a misconception of the relation which man bears to God. The primary concern of humanity is not with the relations between man and man, but with man's relation to God.

If we begin with man's relation to man, we arrive at some petty scheme for social betterment or class legislation, or some fantastic plan for economic security. Sociological and economic planners fail. They always have failed. They will continue to fail. They fail because they begin with man and they end with man. And the last state of man is worse than it was before.

Agitators, philosophers, psychologists, and philanthropists have glorified man. They have canonized man. They have made man the standard. They judge everything by what man wants or what he can enjoy. Everything is made to center about man's well-being.

It might surprise you, if you were to review in your minds the history of the last 200 years, to find that everything that has been attempted in the way of social progress, in this land or in Europe or in any any land, has been attempted in the name of the rights of man. All the acts of the French Revolution, and of all the revolutions that followed it, were a consequence of the declaration of the rights of man.

All the works of the philosophers of the last two centuries are based upon some theory of human liberty. All the discussions of our peace conferences and of our disarmament conferences center about the rights of man. In this present cold war we are most disturbed because the rights of man have been trampled. Rights of man, freedom, independence—these have become the watchwords of humanity.

Did it ever occur to you that the Lord Jesus Christ, the Son of God, coming into the world in human form, coming at the time when His own race was despised, oppressed, robbed, groaning beneath the yoke of Roman slavery; coming as their Messiah; coming to redeem a bankrupt race—has nothing to say to His own people about their rights?

Nothing at all.

Jesus Christ is preeminently the Apostle of Duty. He tells men that, from the divine point of view, sinful men have no rights until they accept Him as Lord. Translating literally from the Greek: "He came into His own [world] and his own people received Him not. But as many people as did receive Him to them gave He the right and the power to become the children of God, even to them who believe on His name."

The only thing He says about rights is that there are times when Christians must surrender their rights in order to discharge their duties. "Work", "do", "labor"—these are the words that are constantly on His lips. "These things ought ye to have done."

Men today will accept any doctrine, they will follow any leader, they will join any association that promises in any way to secure for them their rights and their liberties. But if you come to them in the name of an organization that lays emphasis on the duties of men, that speaks to them of their duties to God and to humanity, they turn a deaf ear.

No unregenerate man has any "rights" until he receives Christ. Then and only then Christ gives the right to become a child of God, God owes no man anything until this relationship has been established.

"Blessed are they that do his commandments, that they may have right to the tree of life, and may enter in through the gates into the city" (Rev. 22: 14). If we are ever to find a permanent basis for justice and peace in this land and throughout the world, we shall find it in our recognition of our duty to the Prince of Peace rather than in the assertion of the rights of man.

And the first duty of man is to acknowledge the Sovereignty of God over all and the Kingship of Jesus Christ His Son.

Visitor in Trujilloland

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Time magazine for May 25, 1959, by Associate Editor George G. Daniels:

DOMINICAN REPUBLIC—VISITOR IN TRUJILLOLAND

(Vacationing in the Caribbean, Time Associate Editor George G. Daniels spent 3 days in the Dominican Republic, where Dictator Rafael Leonidas Trujillo is tensely on guard against any attack by Caribbean revolutionaries. His report:)

No one batted an eye when I presented my tourist card with its "Occupation: Journalist." They quietly took my picture, checked me electronically for weapons, secretly searched my belongings, fastened a couple of plainclothes cops to me like leeches, and turned me loose.

What I saw was the bristling little dictatorship of Generalissimo Trujillo. The Dominicans brag that they have 25,000 men under arms, an air force of 50 jets, and a navy of 19 frigate-destroyer escort-type vessels, all highly efficient. The troops looked neat and tough. Drive west from the center of Ciudad Trujillo, and you come on huge fields with possibly 2,000 to 3,000 men drilling in squad-sized groups. These are the draftees, and their D.I.s strut and chant like U.S. Marines, all very sharp. On the air route from the east, there is a brand-new jet base at San Isidro, about 15 miles from Ciudad Trujillo, with what looked like 8,000-9,000-foot runways and high-speed taxi strips. What is more, Trujillo's navy actually sails—one or two of the frigates were constantly on the horizon while I was there.

IN LOCKSTEP

The city they like to show visitors looks something like the better residential sections of Palm Beach, Fla. The 10-minute drive from the airport takes the visitor past block after block of modern houses that range from $50,000 on up to $200,000. This one belongs to Trujillo's son, that one to his daughter. Brother Hector, the nominal president, lives here; this is one of the chief's houses; his uncle owns this one, aunt that one. Out in the country there are magnificent ranches owned by the chief, a handsome estate with a small French chateau owned by one of his daughters.

Trujillo's country home near San Cristobal, 20 miles west in the foothills, is as big as a castle and guarded like one. I went up there with my two policemen buddies, and a soldier dogged me so closely it looked as if we were in lockstep. The house itself is an immense pile of plate glass and yellowish-brown stone, with galleries running all around. On the next hilltop was a huge neon sign about 50 feet by 20 feet that flashes at night, "telling people," my buddies said, "of all Trujillo's good works."

PAINTED SLUMS

What the Dominicans do not like to talk about is the poverty. They show visitors the new housing project across the river from Ciudad Trujillo, but it is very small potatoes compared with the slums that make up the bulk of the city. The hovels are all freshly painted, generally an ocher or a sky blue or sea green, with a barn-red trim framing the doors and windows. That's the way El Benefactor wants it, and everybody paints once or twice a year. But the houses themselves are miserable one- or two-room shacks, so old and termite-riddled that they list crazily against one another. The children are naked and dirty, the women haggard, and much of the cooking is done on the sidewalk over charcoal braziers—rice, fried bananas, very little meat.

No one begs in the Dominican Republic. First offense draws 6 months on the work farm, the second offense a couple of years, the third, life imprisonment. "Either they work," said my guide, "or they don't eat." Nor is there much unofficial crime, petty thievery and such. What's the penalty? "The penalty, sir, is that you don't do it again."

The restaurants, casinos, and nightclubs are empty, except for pistol-packing big wigs, and only a few of them. The Hotel Jaragua is almost deserted, and the 310-room Embajador, which cost $6 million or so, had about 20 guests. I'm convinced that the slot machines and games are fixed in favor of the tourists, in hopes that someone will spread the good word back home. At least, I could not lose for winning on the slots, and I watched a blackjack dealer accomplish a nearly impossible feat: he went over 21 on 3 of 5 hands, thus keeping the one occupied table at the Embajador going.

Maybe one of the reasons the place is so unattractive is the way they study the stranger. On the second day, in the car, one of my cop chums turned to me and said: "You're German, aren't you?" "No," I said. "I'm Irish-English." "Well, what about your middle name?" he said. "You mean 'Goetz?'" I asked. "Yes." So I said I had just a little German in me, and remembered that the only place my middle name appeared was on my passport (I had not used it on my tourist card), which I had locked in my dispatch case in my room.

Report to Members of the New York Society of the Panama Canal

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report to members of the New York Society of the Panama Canal:

At the annual reunion meeting, May 2, 1959, of the New York Society of the Panama Canal, the presiding officer, Col. Ralph H. Sartor, called on Mr. Harry Bortin, a Roosevelt Medal holder, of Washington, D.C., to explain briefly the provisions of the following resolution which he had submitted previously, to the undersigned secretary, for consideration at this meeting.

Responding, Mr. Bortin explained briefly the substance of the five "whereas" clauses, and read aloud the three "resolved" clauses of the following resolution, which was thereafter introduced by a member, seconded by another member and, on the presiding officer's call for the ayes and nays, was adopted by unanimous vote.

JOHN J. FITZPATRICK,
Secretary.

The resolution:

"Whereas the factual record in reports previously submitted and explained briefly at annual reunion meeting, May 2, 1959, of the New York Society of the Panama Canal, by Mr. Harry Bortin, shows the 6,865 civilian officers and employees who had earned the Roosevelt Medal for 2 years continuous service on construction of Panama Canal, were excluded from the annuity benefits granted by the 64th Congress in Public Law 316, of March 4, 1915, for like services by officers of the Army, Navy, and Public Health Services; and

"Whereas the exclusion of those civilian canal builders from that law, was considered and protested by former President Theodore Roosevelt, and by Gen. George W. Goethals, and by other Government officials, and by leaders of private organizations, such as American Federation of Labor, and four railroad brotherhoods, as unjust discrimination during the subsequent 29 years, until the 78th Congress, by Public Law 319, of May 29, 1944, corrected that injustice, in part, by granting recognition and annuity benefits to about 80 percent, more or less, of those 6,865 Roosevelt medal holders; and

"Whereas the other 20 percent, more or less, of those medal holders continued to suffer from being unjustly excluded from the recognition and annuity benefits of the 1944 law, for 15 additional years until the present; and

"Whereas on the basis of the facts presented and of our own knowledge of related circumstances, we believe that their exclusion from the recognition and annuity benefits of the 1944 law, is contrary to the principle of "equal justice under law," and is in violation of President Theodore Roosevelt's sincere promises to the civilian canal builders in 1906, on behalf of the people of the United States; and

"Whereas some 194 reputable citizens from 22 States, Canal Zone, and District of Columbia, on the basis of those facts, had petitioned the 86th Congress to end that discrimination, by changing the 1944 law's minimum requirement for eligibility to its benefits, from '3 years' to '2 years'; and Hon. ADAM C. POWELL, JR., Member of Congress from the 16th District of New York State, introduced in the House of Representatives on March 23, 1959, a bill, H.R. 5940, 'to extend the benefits of the Panama Canal Construction Service Annuity Act of May 29, 1944, to certain individuals,' including the holders of Roosevelt Medal who were excluded from the 1944 law, as amended: Therefore be it

"*Resolved by the New York Society of the Panama Canal at its annual reunion meeting on May 2, 1959,* That we approve and endorse the pending legislation in H.R. 5940, as for the public interest in honoring the memory of President Theodore Roosevelt who made possible the building of the Panama Canal, and in fulfilling his promises to the civilian officers and employees who helped to build it; and be it further

"*Resolved,* That the secretary of our society is hereby authorized and directed to certify this resolution as having been duly introduced, seconded, and adopted; and to transmit copies of it to the chairman of the House Committee on Merchant Marine and Fisheries, and the chairman of its Subcommittee on Panama Canal; also to the Congressmen and Senators from New York State; also to the Civil Service Commission, and to the Bureau of the Budget, with request to each of them to press for favorable action toward enactment of H.R. 5940, and a companion bill in the Senate, during this session of the 86th Congress; and be it further

"*Resolved,* That the chairmen of the aforesaid House committee and subcommittee be requested to hold public hearings on that bill at an early date, and notify all parties concerned, through this secretary, Mr. John J. Fitzpatrick, and through Mr. Harry Bortin, the Washington representative, in advance of that date, so that they and we may appear to testify, or present statements to the subcommittee, if we should be unable to appear in person at those hearings."

Armed Forces Day Speech by Brig. Gen. Laurence B. Kelley

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. ROGERS of Texas. Mr. Speaker, Armed Forces Day is always celebrated in the Panhandle of Texas in the same manner as we do everything—in the biggest and best way possible. This was the case this year on May 16, 1959, at which occasion the principle address at Amarillo Air Force Base was delivered by Brig. Gen. Laurence B. Kelley, Director of Logistics Plans for the Materiel Deputy Chief of Staff for the Department of the Air Force. Under unanimous consent, I insert herein the address of General Kelley:

ARMED FORCES DAY SPEECH BY GENERAL KELLEY, MAY 16, 1959

Ladies and gentlemen, I am very honored to be here today, not just as an Air Force officer, but as a representative of all the United States Armed Forces.

President Eisenhower has described the theme of this tenth annual Armed Forces Day as "Power for peace." Now I don't want to give a long lecture or throw a lot of figures at you, but I would like to spell out the meaning of these words, "Power for peace." For one thing, you're helping to support a military budget this year of some $40 billion and you should know what you're getting for the money. But more important than that, I think you should know why we say power means peace.

Our job in the Armed Forces is first, to prevent war, and second, if war is forced upon us, to win it. Notice that I put prevention first. Do you remember the saying, "There are no atheists in foxholes"? Well, I think I can say with equal truth that there are no warmongers in the Armed Forces. We live every day with the awesome power of our new weapons, and anyone who knows as we do the capability of these things, would have to be a homicidal maniac to be eager to see them used. That is why I believe you can't find people anywhere who more sincerely want peace than we who work in the military services.

Unfortunately, as the world found out once again at Munich, wishful thinking does not maintain peace. All of recorded history is proof of the fact that if you want to avoid war, you must first be prepared to win it. This is precisely what we are trying to do today in the United States Armed Forces.

Let's look for a moment at what we call in military terms, the nature of the enemy threat.

We face today a threat unique in our experience: the possibility of a sudden, destructive surprise attack upon the continental United States. For over a 150 years, we were protected by geography, by the natural barrier of thousands of miles of ocean extending beyond each of our coasts. We could sit comfortably behind this cushion and say to the rest of the world, as we did in the Monroe Doctrine, "You keep out of our affairs, and we'll keep out of yours." After all, we could afford to be cocky; we had not only vast oceans on our side, but the British Navy as well.

The military advantages of our geographic position began to fade with the advent of nuclear weapons and the long-range bomber to deliver them. They declined still more as these bombers became high-performance jet aircraft. And they virtually disappeared with the arrival of the intercontinental ballistic missile. Even the very oceans have changed from a protective moat to a dangerous cover; the waters which once carried American frigates may soon conceal hostile submarines capable of launching missiles right off our very shores. Thus, the new technology of war, in just 15 short years, has placed every inch of American soil and each one of our citizens in a front line position.

If these were simply abstract facts in a textbook on miltary strategy, we'd have no immediate problem. The point is that the Soviet Union already has all of these means of delivery and the weapons to go with them, and further, that this capability of theirs is increasing rapidly. Which leads to another point, one central to the whole matter of general war.

By definition, an aggressor attacks first. President Eisenhower repeated flatly, a few weeks ago, that we would not fire the first shot. The Russians on the other hand, as their recent history proves, would have no scruples whatever about launching a surprise aggression, if they thought they would gain from it more than they would lose.

One final point in this connection. Before the Atomic Age, the most an aggressor could achieve from an initial surprise strike against a major power was the elimination of a fleet, or an army, or perhaps, the capture of a big chunk of territory. Now, there is the distinct possibility that an aggressor could—quite literally—destroy a major nation in a matter of hours.

Here then, is the first and greatest threat facing us: a nuclear attack, delivered with crushing strength and with little or no warning.

A second threat we must counter is the possibility of war which is less than total. This type of war has been termed as area or local war and frequently as limited war. Here too the Soviet Union has an advantage in that they can spark off such a conflict at any time, at any place around their perimeter of influence, which encircles half the globe. Moreover, they can fight it without committing a single Russian soldier, using satellite forces armed with Soviet equipment.

Since I am involved chiefly in the Air Force logistics planning I have some knowledge of what it means to prepare for a war we don't know where, we don't know with whom, we don't know how widespread, and which might start tomorrow morning at eight o'clock. And a look at a map of the world quickly shows that there are about a baker's dozen of places, scattered over the globe where a limited war may conceivably break out. All these unknowns make planning a rather sporting business.

The third type of war has been a constant fact of life for all of us since 1946. I refer of course to the cold war, a war characterized by an unending political, economic and psychological fight between the free and Communist worlds. This war is predominantly nonmilitary, since it is essentially a struggle for the minds of men. But men respect deeds, and our vast military assistance program and our military contributions to regional security organizations such as NATO and SEATO have had a profound effect on our allies. I might add that the effect has been even more profound on the Russians, as the intense interest of the Soviet press in the recent 10th Congress of NATO bears witness. At the conclusion of World War II, much of the world feared—and the Communists fervently prayed—that we would retire into isolation, much as we'd done in 1919. Instead, we not only did not pull back, but we became a bulwark of aid for freedom everywhere—in Greece, Turkey, blockaded Berlin, Korea, Formosa, the Middle East. And this aid was made possible by the shield provided by American deterrent power. Beyond any doubt, the one big reason why the cold war has never completely boiled over during the past decade has been the fact, very evident to the Communists, that they are the ones who would get burned if it did.

We call this concept "deterrence," and it is our basic overall answer to the threat posed by Soviet imperialism.

What is "deterrence"? There is nothing really new about it. Years ago Army posts on the frontier performed a function very similar in design to our deterrent forces today. The Indian raids that did get through were bad enough, of course. However, try to picture what Indian war parties would have done here in the Panhandle if it had not been for the troops based at Fort Sill up in the Territory, Fort Bascom across the line in New Mexico, and Forts Davis and Concho down to the south. The very fact that these posts existed, holding cavalry units ready to go on short notice, very largely kept the Indians in check and permitted settlement of the West.

You wouldn't think so from watching TV but, in actual fact, few of the famous frontier marshals found it necessary to do a lot of shooting. They didn't have to. Wyatt Earp's Colt maintained law and order in Dodge City through its deterrent effect: That is—everyone knew that it was there, that Earp could use it well, and that he was ready to use it. As a result, he rarely had to use it. This, very simply, is what we mean when we speak of deterrence.

In today's terms, it means these three elements. First, we must have strong forces, ready for immediate action. We can no longer depend upon getting the forces we need after the war begins. If we must fight, we shall have to do it with the forces we have in being now, this instant. And these forces must be capable of destroying any possible aggressor's capacity to wage war.

Second, we must possess the national will and determination to develop and provide these forces, and to use them when it is required.

Third, any potential enemy must believe in the fact of our having such forces, and in our determination to use them if need be. If he does not believe in both of these, he may very possibly touch off a war through ignorance or inadvertence. When the files of the German general staff came into our hands in 1945, we found out that Hitler had ordered the invasion of Poland because his intelligence had advised him Britain would not fight to protect Polish freedom. We must be careful that no future aggressor is similarly misled.

Having explained the meaning of deterrence, let me describe now very briefly how we provide it.

I said earlier that the most dangerous form of Soviet aggression would be a surprise atomic air attack. The best way of preventing such an attack is to maintain our own air atomic force capable of destroying the warmaking capacity of any possible aggressor.

A large part of our deterrent strength is vested in the Air Force's Strategic Air Command. They are the boys who carry our Sunday punch. A substantial number of our SAC crews, by the way, are always on 15-minute alert—that is, 15 minutes after the whistle blows, they will have their birds airborne, fully armed and enroute to a predetermined target.

The fast attack carriers, whose nuclear-capable jet aircraft provide the backbone of our naval striking power, add to American deterrence the advantages inherent in their mobility and dispersion. Also, we have intermediate range ballistic missiles already in place overseas, and the Army, for some time now, has had a variety of tactical missiles with nuclear potential operational in the field. Our first-generation ICBM's will soon be available to augment the SAC bombers. You probably know that these ICBM's have a demonstrated capability to reach out thousands of miles and hit any target. As we learn more about these huge, temperamental beasts, we shall use them more and more to supplement our piloted force. A word of caution, though—the true so-called pushbutton war is still a long way off.

Our deterrent strength is, therefore, a mixture of weapons and support provided by all the services—a unified defense team of over 2½ million men. To this should be added the significant power of our free-world allies, consisting of millions of men and thousands of jet aircraft and warships.

I mentioned that we face the prospect of many limited wars, as well as the ever-present threat of the big one. We must, therefore, be able to deliver not only a knockout punch with the full weight of SAC, but a fast jab with anything ranging from a few tactical aircraft or a company of Marines on up to a sizable task force of Army, Navy, and Air Force forces.

Our worldwide tactical air forces—comprising almost one-third of our air strength—are particularly adaptable to the limited conflict. These units can, either from overseas bases or after rapid deployment from domestic bases, engage in limited war without seriously detracting from our general war posture. Their high mobility was demonstrated twice this past year, during the Lebanon and Taiwan Straits situations. In the Middle East case, for example, jet fighters from Myrtle Beach, S.C., touched down at Adana Air Base in Turkey after a nonstop flight of less than 13 hours. Also, in Lebanon, the 6th Fleet landed a strong amphibious force of Marines under naval air cover, and did it on incredibly short notice. The Army also has highly streamlined mobile forces which are available to be airlifted to any potential trouble spot on short notice. It should be remembered, however, that these operations are possible only because the Kremlin is very much aware of the cocked and ready striking force of SAC. The ability to rapidly deploy combat forces an maintain combat capability requires a highly responsive transportation system. MATS, the Military Air Transport Service, enables us to rapidly move vital equipment, supplies, and personnel to bases around the world. This single-manager agency includes Navy units and is supplemented by the Civil Reserve Air Fleet. In the event of an emergency, the commercial aircraft which are included in the CRAF program become immediately available for airlifting essential military cargoes. Another important element of the transportation system is the Military Sea Transportation Service operated by the Navy. MSTS has the capability of moving heavy equipment, bulk shipments, and large forces when such movements are required.

I've talked about our deterrent strength in the usual Army-Navy-Air Force terms. Now let me tell you how these armed services combine their efforts to achieve this strength.

Both legally—as a result of the recent reorganization of the Defense Department—and in practice, the military services are much closer together than most people realize. However, you sometimes get the impression from the newspapers that we are more interested in fighting each other than in preparing for the common defense. Of course we differ among ourselves. Very often, we differ even in the same service as to what will give us the best return on the defense dollar.

Decisions are being made in the Pentagon which crucially affect our national security and, quite naturally, feelings about them run pretty strong. Should we buy another nuclear-powered carrier or another wing of B–52's, another division of paratroops or another squadron of missiles? Yet, if we misjudge, the results may be fatal to the United States. You can see, I think, why legitimate differences may arise.

But I want to stress first that these differences cease the moment a command decision is made. And second, there are no differences whatever out in the field, where the defense policies of the Nation are actually implemented, and where you will always find close and effective cooperation toward a common objective. This is why it is misleading to think only in the old sense of separate Army, Navy, Marine, and Air Force missions—we are, in fact as well as name, the United States Armed Forces.

The cost of operating our Defense Establishment is high, about $40 billion this year. I wish I could tell you that this expense will go down. However, just as you have to pay more for the same thing each year, we do too. Even if we were still using the same types of planes, guns, and ships we had in 1945, our expenses would still have gone up. And the fantastic complexity of our new weapons systems pushes the price up even further.

If I may inject another note, by the way, I might point out that we have not yet begun to feel the cost to be incurred by our forthcoming exploration of space. Not so very many years ago, I flew my first jet plane. It is entirely conceivable that before I retire from the Air Force, I will be

involved in providing logistics support for a Moon base or a manned satellite station. The financing of such ventures, and the cost of the equipment required, may well prove—and please excuse the pun—astronomical. Yet what choice have we? Can we abandon space to the sputniks?

The price certainly comes high for modern military hardware, but it comes even higher in terms of human effort. Right at this minute, while I speak, thousands of our Air Force radar, fighter, and bomber crews are on alert around the globe. These men, and all the men backing them up, are putting their jobs and their country above personal convenience. They are not getting extra pay for their lack of comforts, nor are they getting overtime for the long hours. So far, it isn't a shooting war—and these men know that the better they do their job, the less likely it is that there will be a shooting war. If their tasks are to be meaningful, it seems to me that the entire Nation must put forth extra effort comparable to theirs.

We sometimes forget the extent of the problems that were licked by the Americans before us, problems which, in their time, were as grave as those we face now. Here in the Panhandle, the early settler faced, and triumphed over, Indians, blizzards, drought, and disease. I am confident that the same spirit that met and conquered these obstacles still lives in the land today, and will provide all of us in the United States Armed Forces with the resolute public support we need to do our job of maintaining power for peace.

The Passing of County Government in Connecticut

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. GIAIMO. Mr. Speaker, it gives me great pleasure to remark on the great record which is being made by the Legislature of the State of Connecticut under the inspiration and leadership of our great Governor, Abraham Ribicoff. After many years of ill-fated attempts and frustrations, Connecticut has abolished its county government, an anachronism which burdened my State for too long a time. Credit for this accomplishment is due to many people and many organizations, but more than anyone to our great Governor Ribicoff.

I wish to bring to each Member's attention an editorial from the Christian Science Monitor of May 12, 1959, which refers to this accomplishment.

The editorial follows:

SIXTEEN THOUSAND GOVERNMENTS

Connecticut has just sentenced its obsolescent system of county governments to oblivion in the interest of economy.

This move, instigated by efficiency-minded Governor Ribicoff and backed by both houses of the legislature, should pave the way for simplification of some of the complex and expensive government structures that haunt other Governors and harry their taxpayers.

The plain, inescapable fact is that Americans, who used to govern themselves, now are themselves governed from many directions. And one reason is that the jerrybuilding of new and necessary government units has gone on apace while little has been done to eliminate or condense outdated units.

To professional administrators the results in some cases are appalling. For instance in the 174 big-city areas of the American nation (where over 80 percent of current population growth is taking place) there are over 16,000 governmental units with the power to tax and spend. That's an average of about 92 governments to administer each of these population concentrations.

Now it may fairly be said that with such split-up layers of government each unit is clearly responsible for its actions—there is no hiding within the vastness of a larger unit. But what citizen is able to keep his eye on 92 units—or even 50—anyway?

For many of its citizens the United States has become in essence a kind of Overlapping States of America. Border lines between town, county, State, and Federal government have become blurred with shifts of function and proliferation of agencies. Without the aid of sometimes costly professional advice, few taxpayers know to what unit to turn for help with their problems—an essential service they are paying taxes for.

It is for this reason that we believe simplification, regrouping, and/or condensation of government functions from the local to the Federal level is essential.

Connecticut's abolition of its eight counties—accomplished by transferring their few remaining necessary functions to State agencies and saving money on payroll costs—gives on example of what can be done.

In other States, county governments may be strengthened rather than weakened to achieve the desired result. This is particularly so in some 108 of the country's metropolitan areas whose over-all boundaries, although they may contain many suburbs, happen to coincide with the borders of a single county unit. In some of these areas plans are being laid already to condense dozens of service functions such as parks, water, and sewerage under a single government.

The point is to reduce the number of middlemen handling the taxpayer's money for him. Connecticut has set an example worth examination in other States.

A Deluge of Corn Coming?

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. BROCK. Mr. Speaker, during the recent debates on the floor of this House the membership was concerned about placing a limitation on Commodity Credit Corporation loans to farmers producing grain. The House approved a limitation of $50,000 and the Senate is considering lowering the amount of any one loan to $35,000.

Since controls on acreage allotments were removed by Secretary of Agriculture Benson, farmers are putting every available acre into grain. With the promise of a bumper corn crop in 1959 it looks like we are headed for real trouble this coming harvest time with a surplus of corn.

Mr. Speaker, under permission to extend my remarks, I, therefore include in the RECORD an editorial appearing in the Omaha Daily Journal-Stockman on May 25, 1959, on the corn corp outlook for this season:

A DELUGE OF CORN COMING?

Spot checks during corn planting time provide some rather convincing evidence that a much larger acreage than in any other recent year has been put in corn. Farmers weren't just "talking through their hats" when they told the Government planting intentions survey group in March they planned a sizable increase. Apparently they've carried out their intentions. The result is a potential corn crop that could be bigger than even the 1958 record.

Adding to the impetus for more corn have been several seasonal factors, our spot-checkers find. Wet, cold weather during oat seeding time prevented some farmers from sowing as many acres to that crop as they had planned, and these acres are now going into corn. Soybean market prospects have helped switch some acreage to corn. And near ideal corn planting wetaher and conditions in many areas have encouraged farmers to go "all the way" with corn when they got started.

One interesting thing our survey showed was that it is primarily the grain growers who are pulling out all the stops on corn. Livestock farmers go along pretty much according to pattern. A few of the latter admitted they were going even a little lighter on corn this year, having seen everybody else in the community hitting it heavy and thus figuring corn would be dirt cheap as a result.

So, we're off to a big corn year, no doubt about it—some say it could be a four-billion-bushel year, maybe more. But the fact that the seed is in the ground does not insure a big crop, of course. Drought could upset the applecart. There are a few dry spots around, but lack of moisture is not a general worry at this stage of the situation.

Supposing the weather pattern is good, and we go on to a corn crop of 4 billion or even 4.5 billion bushels—what then? Well, a big surplus of corn, to be sure. Corn everywhere. Cash corn would be cheap, and the Government would do a loan business that would make the land-office "sharks" look like pikers. It would mean cheap feed, and plenty of it. Obviously it could stimulate livestock production.

Whether livestockmen could realize any real advantage in such an abundance of cheap feed is doubtful. The increase in red meat output already in the works would be heightened as more farmers attempted to take advantage of cheap feed. The possibility is that nobody would gain except the consumer, who is already the chief beneficiary in this era of big grain and livestock output.

Inclination to feed up a big part of this year's corn crop could mean stronger emphasis on pig production later this year and the possibility of much lower hog prices through 1960. And it could stimulate further the demand for stocker and feeder cattle, adding strength to prices and causing feeders to bid replacement cattle up to the point that margins would be slim, if they existed at all.

There is, we would guess, a good chance that corn production has been seriously overdone—provided the weather permits a big crop. If this possibility materializes, the repercussions could provide a real jolt in many ways.

Extravagant Spending Programs

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. SMITH of Kansas. Mr. Speaker, recently this letter appeared in the Hill City Times, a typical rural county seat town on the High Plains of Kansas. This letter is inserted because it contains a lot of truth—ideas that the Congress should remember whenever the subject of appropriations comes to the floor of the House.

Over the years, I have consistently pointed an accusing finger at the Congress for all these wild extravagant spending programs, and have said more than once we in the Sixth District of Kansas know full well that we should not be exempted from trying to balance the budget and live within our means. In other words, the people of the sixth district are not exempt from doing their share in this drive for economy.

I commend this article, written by Harold Dwyer, as it appeared in the Hill City Times. This column in which this article appeared is entitled "The Galloping Goose," a rather strange title, but the ideas expressed should come home to roost by those who formulate and pass appropriation bills, namely, the Congress of the United States.

The article follows:

THE GALLOPING GOOSE
(By Harold Dwyer)

MAY 13, 1959.

MY DEAR CONGRESSMAN: Here is another word from the common herd.

It is frequently suggested that we write to our Congressmen. I always hesitate, for two reasons. In the first place it seems a waste of perfectly good ink and paper. In the second, your own voting record is such that you do not need to be written to.

But in the matter of this inflation thing, it is hard not to say something to someone. I already know just about how you will vote to help the President hold the line with his budget, but I'm hoping it isn't too much to ask that you do what you can to cause some of the characters with whom you serve, to also see the light.

I marvel at the crust of some of these potlickers who come out into the districts and trowel on the salve to drum up enough votes to be elected, then hightail it right back to Washington to "represent" us by apparently sitting for days and weeks on end with chin in hand and elbow on something soft, just thinking up different angles of running us through the tax wringer, and how to create bigger and better ratholes for the Government to pour the tax money down.

When people do wrong, it is the result of one of two things—either misunderstanding, or with malice aforethought. And these birds are not dumb. They're smart enough to talk a lot of people who should know better, into voting for them. And they're smart enough to see to it that their own nests are not entirely devoid of feathers. So when they sink a fang into the hand that's putting the biscuits on their table, it's no accident. When they start helping to milk the homefolks, the people with whom they grew up, then vote for measures that may just add a few feathers, or enlarge and lengthen the rodent runways, then we may know for sure that they've had yegg blood in their veins all the time.

It's a dead open-and-shut. A man either is—or he isn't. He can no more be half honest than can his wife be half pregnant. If he votes time after time to increase the load on the common people back home who pay the taxes, and at the same time for increased Government spending on projects that will benefit only a few on the inside who have their special cars hitched to the gravy train, then he is inherently criminal—and the truth is not in him.

I know I'm asking you to do one whale of a job. But this is a serious situation. We are being bled white—and much of the tax money being worse than thrown away. Congress is our only point of contact with that situation. To it we must turn for any help to stop the stampede. And Congress has become a standing joke. Maybe on account of having so many standing committees, but more likely because so many of the jokers with whom you serve are yeggs at heart.

If it's wrong to stickup a man at gunpoint and take his money, then it is no less criminal to finagle around and swap favors and pass a law to take it away from him legally. Many of these lugs are in my opinion just as upright and decent as any of the other thugs who ply their trade up and down the dark alleys, only the alley boys take 'em as they come, while their silk-underwear brothers with whom you rub shoulders daily specialize on doing it to their friends and neighbors.

Fully aware am I that we the people out in the bushes are not entirely blameless in this rip-roaring drunken orgy of taxing and borrowing and throwing to the birds. So many of us have a hand out for a handout and "write our Congressman" to support any proposal from which we can hope to get a healthy slice, no matter how it may weaken the economy, nor how surely it may help drive this country to the brink of ruin farther up the creek. We also know that when one leans that way naturally, it doesn't take many such letters to give him a good excuse to go out in that direction.

In the opinion of most of us the President's budget is gosh-awful high as it is, but he understands that about the only way to stop a bad stampede is to get the critters to milling in a circle, and that is probably what he has in mind. We have to get stopped before we can start back. And it seems that we just must hold the line here.

Again let me say that I know fully the size of the task I'm asking you to do. If you think it will help any, you may tell your associates that to me and countless thousands of others, the voting record of you and a few others on this thing is such as to make you and them stand out like a few dozen kernels of wheat in a bushel basket of floor sweepings.

And please know that anything you can and will do to help put out the fire under this inflation pot, will be more than appreciated by millions of us.

Sincerely,

Name _____
Address _____

Cal Farley's Boys Ranch

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. ROGERS of Texas. Mr. Speaker, Saturday, May 23, marked the culmination of Cal Farley's Boys Ranch Week in Texas. In recognition of the event and the 20th anniversary of the perpetration of a magnificent ideal, I rise to pay tribute to one of the greatest living Americans—Cal Farley. The name is well known to many Members of this body, as is the institution which he founded and has fostered since its inception in the spring of 1939.

Long noted for his community contributions, particularly in the promotion of boys' sports, Cal Farley was a successful businessman in Amarillo, Tex. Throughout the thirties his philanthropies were focused more and more on delinquent boys which led him to the formation of the Maverick Club in Amarillo—an organization devoted to providing constructive sports activities for boys who had never had this kind of opportunity—for boys who would otherwise have spent the time finding their own sport in the pursuit of idleness and the resultant social constrictions. Farley's Maverick Club functioned purposefully, it grew, and it performed a notable and worthy community service. With ordinary people exercising ordinary vision in an ordinary community, this might have been the sum and total of this project. The community, the vision, and particularly the man were not, however, ordinary. On the contrary, they were, and are, extraordinary, as is evidenced by the inevitable result. I say inevitable because the urgent need of these boys and the compassion and purposeful ability of Cal Farley were bound to produce one of the greatest humanitarian ventures in our great land.

Through the generosity of Julian Bivins, Panhandle rancher, Cal Farley in 1939 founded Boys Ranch at Tascosa, Tex., an abandoned ghost town near Amarillo which had been a colorful trading post in pioneer days. With six homeless boys, a cook, a supervising couple, and the firm conviction that no boy is born bad, the foundation was laid for the magnificent institution of Boys Ranch. The idea and the man were so consumed with fruition that Cal Farley soon sold his business interests in order to devote full time to the ranch which has, in the 20 years since its founding, given some 1,500 boys "a shirttail to hang on to."

Last Saturday at the ranch, celebrities and notables from all over the United States joined the people of the Panhandle of Texas in saluting Cal Farley—a great American, a great Texan, a great man. The community award presented to Cal, the stirring words of tribute, were all appreciated by him, I know, but I am certain his greatest reward is written in the hearts of men and boys throughout the world as they continue to strive toward goals of responsibility and contributions to society first demonstrated to them at Boys Ranch.

Publication of Cal Farley's biography, "A Shirt Tail To Hang On To," by Beth Day, has just been announced by Henry Holt Publishing Co. In order that the Members may have an account of the scope and accomplishments of Boys Ranch today, I insert herein an account which recently appeared in the Amarillo

Globe-Times by Associated Press writer Finis Mothershead.

THE RANCH PROVIDES A GOOD PLACE FOR BOYS TO GET THINGS DONE HONESTLY

(EDITOR'S NOTE.—This is the last of three articles about Boys Ranch founded by Cal Farley, and its heartening success in building useful citizens from underprivileged and prison-bound boys. They're celebrating the ranch's 20th anniversary this week.)

(By Finis Mothershead)

AMARILLO.—If you've had to steal for anything you ever wanted, can you learn to quit stealing?

At Boys Ranch they'll show you it's been done right along for 20 years.

Cal Farley, an ex-wrestler and businessman, is credited for cajoling his neighbors into giving what it took to build this unique foster home, and for keeping after them to make room for still more boys.

He and his coworkers figure this way:

A boy who stole—because he was hungry and cold, at a sorry parent's order or only for the thrill—simply needs a little practice at how to get things honestly.

Give him love and attention, insist on discipline, let him learn responsibility. Most boys will do the rest.

Unprompted, a youngster who's had time to get acquainted sidles up to a sullen new arrival and advises quietly: "Take it easy. They treat you right around here."

It's not uncommon for an underfed waif to gain 10 pounds the first week. And he's startled to discover he gets a monthly salary just for doing his share of the chores.

The formula isn't infallible. Of the 1,500 boys who've grown to young manhood at Boys Ranch since it was established near here in 1939, Farley says 42 flunked and wound up in reformatories.

"We failed on them and you can't be sure exactly where," Farley said the other day. "I wish we could have another chance with those kids."

Boys Ranch takes only boys "from the bottom of the barrel," the lowest 10 percent on the social scale.

In most cases they're from homes broken up by divorce, runaway fathers, or the death of a parent. At least half are in trouble. The rest have no place to live and nobody to look after them.

"Without some good apples among the bad, it would be tremendously harder to get ideas across to the tough ones," said Farley.

Boys Ranchers live in small dormitories built to seem more like large cottages. Married couples have apartments in each of the attractive stone buildings.

Meals are in a dining hall big enough to seat twice as many boys as the 251 now at the ranch. They take turns sitting at the head table, learning to make announcements and appear before a crowd, and at serving food to one another.

A bell signals the start of each day at 6:30 a.m. They dress, make their beds and eat breakfast, clean their dormitories, and go to the modern ranch school by 8:30. With a break for lunch, classes last until 3:10 p.m.

After changing clothes, Boys Ranchers have until 5:15 for assigned chores, which are rotated, or school sports. Then come dinner and an evening of television, movies, school studies, Bible class, intramural athletics—some activity to prevent troublemaking idleness.

As for those salaries, the size varies from $2 a month for preschool tots, who do such things as sweeping sidewalks, to $15. Top pay goes to boys who choose less desirable jobs like dishwashing, or those who achieve the status of junior staff members.

Earnings go into each boy's bank account, along with standard credits for clothing needs. He writes checks to buy a new pair of pants, or dozens of items—chewing gum, soda pop, and the like—for which boys elsewhere spend private home allowances.

In addition to making purchases at a country-type store in the ranch warehouse, he may cash a check for pocket change to take on alternate-Saturday trips to Amarillo. Buses take the boys into town.

Adults keep the smaller boys in groups. The others may go anywhere they please without escort in this Texas Panhandle city. Merchants have found them well behaved. Sometimes the clerks are a little too friendly.

"At a big self-service store," said Farley, "we found they liked our kids so well the checkers didn't look inside a boy's sack—just asked what he had bought and took the right price.

"With some of the kids not far removed from expert thievery, that's too much temptation. We asked the store manager: 'Please be sure what they're taking out. Don't invite them to steal by making it so easy.'"

Little things as well as big make Boys Ranch a pleasant place to live.

Fifty or more dogs, mostly of mixed breed, roam the place, sharing an abundance of boy love. Usually there are two or three litters of fat puppies at play somewhere out-of-doors.

Larger boys have opportunity to raise calves and pigs, and win their share of blue ribbons at area livestock shows. They keep detailed records on an animal's growth and the feed required. When the animal is ready for market, the profit goes to the lad who raised it.

Three sizable ponds stocked with bass and perch afford good fishing. There are two good swimming holes. A site is ready when there's money to build an indoor pool.

Birthdays are big events. There's a dormitory party with cake and ice cream every time one rolls around. Other boys in the dormitory are allowed to give a nickel apiece for a joint gift, and the honoree also gets a present from the ranch.

If a boy has relatives with suitable homes, he may go to visit them every Christmas. In the summer, everybody at the ranch shares a mass vacation trip, sometimes halfway across the Nation.

By the time they come to the ranch, many boys are 2 to 4 years behind their age groups in school. Well over half never finish high school. Each year, however, the graduating class is a little larger. Fourteen are getting diplomas this spring. Four will go on to college.

Boys Ranchers depart for good at 17, normally to enter military service. Many later become teachers, engineers or businessmen.

For the others, who got too far behind in school, the ranch provides more than a dozen types of vocational training. They learn farming and all sorts of trades.

None leaves Boys Ranch without being able to earn a living. He knows how to get what he needs without having to steal.

Getting the Taxpayers Return on Their Tax-Dollar Research

EXTENSION OF REMARKS

OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. KING of Utah. Mr. Speaker, legislation which I introduced today could, in time, swell Federal revenue by as much as a billion dollars annually.

The bill would give the United States a share in the patent royalties on inventions and discoveries which are made under Federal research contracts. I see no defensible reason why the taxpayers and their Government should not share the royalties from developments which are made on tax dollars.

At the same time, I am convinced the bill offers other possible benefits. For one thing, it would, I believe, help small business. It would help combat the strong monopolistic trend which currently dominates the Federal research program.

The record shows that 5 percent of the larger industries and research organizations in this country are now gobbling up about 95 percent of the research contracts. I do not believe that we can safely assume the same industries and organizations have cornered 95 percent of the Nation's research talent.

Our struggle for survival against the forces of totalitarian communism demands that we make full and effective use of our research talent. I will be convinced that we are making full use of all of this talent only when the smaller institutions receive their fair, proportionate share of the research load. I am strongly determined that the smaller institutions will carry their fair share of the research responsibility, and I believe that my patent legislation will help correct the current inequity.

As long as 5 percent of the institutions control 95 percent of the research effort, we can safely assume that they will make 95 percent of the discoveries, and swallow up 95 percent of the patent royalties.

Their income from the patents, which is a pure profit, aggravates the inequity and tightens their stranglehold on research. Too, it has the ill effect of narrowing competition and, in the extreme, killing it entirely.

Their research costs are always covered by the contracts, which also provide a profit. They are entirely free to spend their income from patents on expansion—to build additional facilities, to engage more research talent and to gobble up more contracts.

It is a simple case of the big growing bigger, while their small competitors are denied the opportunity to share in any way in that growth.

My legislation follows a principle employed by industry itself. When an employee in industry makes an invention or discovery in his employer's laboratory, he must, in most cases, share the royalty with the company. In fact, as a rule, the company, and not the employee, holds the patent. The same principle should apply at least in part to the technological advances which our tax dollars produce.

Tax dollars today carry the bulk of the national research effort. The research which the Government sponsors spearheads our current technological progress, and the taxpayers have as much right as the corporations to share the royalties from the publicly financed effort.

I discount the arguments that the legislation would hurt incentive. The bill does not eliminate the incentive by

stripping contractors of the royalties, but simply gives the taxpayers a share of the royalties. It does not fix a definite split on the royalties. It enables the Government to negotiate the split, and to determine percentages which will be equitable to both the contractor and the taxpayers.

The research program and the patent-royalty is ably discussed in an article entitled "Increasing Government-Sponsored Research and Development Creates Patent Policy Problems," which appeared May 4, 1959, in Product Engineering. The article follows:

INCREASING GOVERNMENT-SPONSORED RESEARCH AND DEVELOPMENT CREATES PATENT POLICY PROBLEMS

WASHINGTON.—U.S. Government patent policies, in the words of one high-ranking patent official, are a mess. And with the Federal Government now financing more than half the research in this country, agitation for a general overhaul of the system is increasing on Capitol Hill.

Several moves are already underway:

The Senate Patents Subcommittee is in the midst of a study just trying to find out what the policies of the various agencies are.

One Congressman is pressing for a Government cut of the royalties on patents growing out of Government-sponsored research.

The new Space Agency has issued a set of regulations, generally opposed by business, which may mark a new pattern in Federal patent policy.

Still two more questions bothering patent officials and Congressmen are: (1) Whether present policies are fostering or hindering commercial development of the byproduct of Government research, and (2) whether the Government is hastening the death of small business by encouraging big business dominance through patents.

Most of the experts agree that a uniform Government policy is needed, and that it should be fixed by Congress. But what the policy should be starts a number of arguments.

GOVERNMENT DOMINATES RESEARCH AND DEVELOPMENT FIELD

Within the past 10 years Federal expenditures on research have jumped from $1 billion annually to more than $5 billion—with $3.5 billion for the Defense Department alone in the 1960 budget. Private industry altogether spends only $4 billion on its own research.

Many of these Government contracts yield patents which have considerable commercial value. Examples: Transistor and resistor improvements, better computers for ICBM control, heat-resistant alloys for nose cones which also can be used in engines, low temperature experiments in space navigation that apply to the refrigeration or chemical industries. Lithium high temperature grease for airplanes was developed by the Navy. Household spray cans grew out of Agriculture Department research. A number of commercial radar patents are byproducts of Government contracts.

The Defense Department the biggest dispenser of research money, allows a company to keep any patents it develops, except for free use by the Government. Many people have asked why the United States does not at least recoup its research costs by taking a cut of the commercial royalties. The British Government has been doing this since the turn of the century. The Vickers Viscount, developed under government contract, has returned enough to the British treasury to pay off the original research cost and yield a profit. Jet engines have been a profitable venture for the Exchequer. Capt. George N. Robillard, the U.S. Navy patent chief, has been a supporter of the British method for a long time, and Representative FRANK THOMPSON, Democrat, of New Jersey, has introduced a bill to adopt the British system here.

Meanwhile, a firm doing extensive research for the Government is confronted with a variety of policies. The Defense Department is liberal with patents, the NASA is stricter, and the AEC is stricter yet. Since many contracts cut across several agencies, the contractor may be dealing with half a dozen different patent attitudes on the same project.

The economic impact of present policies has had very little attention, and no real studies have been made. The Defense Department feels commercial exploitation is most likely if one company has patent rights. The Tennessee Valley Authority feels differently and has always made fertilizer patents available to everybody. This posed the question: Would the Government have to pay more for research contracts if companies did not have the added temptation of a possible killing on the side? Answers to this and other questions are vital to any new legislation on the subject, and some critics feel that the Senate Patents Subcommittee, instead of merely cataloging present policies of all the various agencies, could spend its time more profitably on these questions.

The report is that excessive channeling of research contracts into big business is causing considerable worry. Big business (over 500 employees) gets at least 95 percent of the Government research, and 100 firms get 85 percent among them. The top 14 companies getting contracts between 1954–56 were all big electric and aircraft companies. The Attorney General has warned that channeling all this patent potential into big big business is just building up the monopoly trend.

The House Small Business Committee recently spoke of "the ominous shadow cast on the future with the monopoly of technology by big business." Small business, say its supporters, helps foot the Government research bill and should at least have access to patents developed at the taxpayers' expense. The big contractors reply that it is their reservoir of know-how that makes research successful.

THE NASA EXPERIENCE

Policymakers, meanwhile, are watching the experience of the new space agency with its relatively "tough" patent provisions. NASA retains patent rights if an invention applies primarily to defense projects. But if it has only incidental use for NASA and "substantial promise of commercial utility," NASA will let the company keep title and collect royalties on the condition that they develop the product commercially within 5 years.

Big NASA contractors have complained about the time-consuming process of getting formal permission from the agency to keep a patent. One contractor, for instance, developed a course director of no use to NASA but useful for blind flying of small private planes. He complains that he cannot get a patent until he proves either that it is primarily of commercial use, or that it was not developed primarily under a Government contract.

NASA's Patent Chief, G. D. O'Brien, says the Agency has actually had no difficulty placing contracts once officials have had a chance to explain patent provisions to bidders. "While they may hesitate at first," O'Brien says, "in no instance have they refused in the end." NASA prefers to let the company keep patent rights because it can impose the 5-year condition. If the patent were offered to everybody, no one would have the incentive to go into production, NASA believes.

LAWYERS BACK INDUSTRY

The American Bar Association backs industry's stand against the NASA pattern. Patents are an incentive to inventive genius, they say, long recognized in the free enterprise scheme of things. Others argue that corporations themselves do not generally let individual scientists keep patent rights, so the incentive factor is already destroyed at the creative level. A Senate Patents Subcommittee, in a study by Prof. Seymour Melman, of Columbia University, concluded that companies have enough other incentives, such as development of know-how, to keep them interested in research even if there were no patents.

Several big corporations have asked the House Space Committee to hold hearings on NASA's policies. But the committee will probably wait until next year when business has had a chance to live with the policies for a reasonable length of time.

Output Controls Stop Programs Working Well

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, May 28, 1959

Mr. NEUBERGER. Mr. President, the Denver Post, of Denver, Colo., recently published a series of six articles on the farm problem. The articles were written by an extremely capable reporter, Robert H. Hansen. Because of their length, I do not intend to insert, at this time, the entire six installments. But I would like today to bring the attention of the Senate to one of the six. It is headlined "Output Controls Stop Programs Working Well," and it analyzes in cogent terms one of the basic questions at stake in today's farm discussion—what persons in agriculture benefit most from our present farm policy? I ask unanimous consent that this article, which appeared in the May 8, 1959, issue of the Denver Post, be printed in the Appendix of the RECORD.

This particular article by Mr. Hansen, which I am including in the Appendix of the CONGRESSIONAL RECORD, emphasizes why controls on farm production have not been successful. These controls are geared to acreages. But Mr. Robert H. Hansen, after a careful study of the situation, stresses that improved farm machinery, highly developed fertilizers, and so forth, simply result in infinitely more abundant crops being produced on the same amount of acres.

Mr. Hansen goes on to point out that the small family-size farmer possesses neither the acreage, the equipment, or the money to capitalize on many of the huge farm payments being made by the Government.

Because this article by Robert H. Hansen, from the Denver Post, is so pertinent to issues which we have been discussing in the Senate I know that many of my colleagues will be interested in reading it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FARM PROBLEM—OUTPUT CONTROLS STOP PROGRAMS WORKING WELL

(By Robert H. Hansen)

Farm programs don't work because farm production controls don't work. Farmers simply grow more on fewer acres with less labor, by using more machines, more fertilizer, more chemicals.

And the more they grow, the more they collect. Crop loans and subsidies go to the biggest producers, in proportion to how much they produce.

Price supports are pegged so high as to keep the small marginal farmer in business. But the big, efficient farmer reaps most of the profits.

Take wheat.

Ninety percent of the cost of wheat price supports results from the production of half of the Nation's 1.5 million wheat farms—the largest ones.

Or cotton.

Seventy-five percent of the cost of the cotton program results from the production of one-fourth of the Nation's million cotton farms—again the largest ones.

Similar situations apply to corn, rice, and other supported crops.

President Eisenhower, in his 1959 farm message to Congress, concluded:

"Clearly, the existing price support program channels most of the dollars to those who store the surpluses and to relatively few producers of a few crops. It does little to help the farmers in the greatest difficulty. * * *

"The control program doesn't work. Mandatory supports are at a level which so stimulates new technology and the flow of capital into production as to offset, in large part, the control effort."

But the little farmer has neither the land nor the equipment, the money, nor the know-how to keep up with the technological revolution in American agriculture which is piling one record crop on top of another—in storehouses.

Storage costs alone are soaring inevitably toward $1 billion a year. By mid-1960 the Government will have a $10 billion stockpile of surplus foods and farm commodities.

The last time the U.S. Department of Agriculture looked, in 1955, 11 grain companies were each collecting over $2 million a year from the Government to store surpluses—when the farm glut was half as enormous as now.

One of these companies, Cargill, Inc., of Minneapolis, Minn., received a total of $9,613,000 for storage of surpluses in warehouses it operates in several States.

Four concerns were each collecting over $1 million a year to store cotton. The largest payment, $10,976,000, went to Federal Compress & Warehouse Co. of Memphis, Tenn.

Last week, Senator JOHN J. WILLIAMS, Republican, of Delaware, released figures showing that 10 private firms each collected over $3 million from the Federal Government in 1958 to store farm surpluses. The largest, C.G.F. Grain Co. of Topeka, Kans., collected $14,787,000. (See accompanying tables.)

In all, 38 companies received over $1 million each to store surplus grain, cotton, and rice for the Government in 1958, and another 30 collected over $500,000 each.

(The Colorado Milling & Elevator Co. of Denver was listed as being paid $800,843 for storage of surplus wheat and barley in 1958.)

Over 12,000 private businesses store surpluses for the Government. Together they constitute a powerful potential pressure group interested in keeping the Federal throttle wide open on crop production.

It's all these 12,000 firms can do now to build storage facilities fast enough to keep up with farm output.

The Wall Street Journal says storage firms have enjoyed somewhat higher Federal storage fees than State regulatory bodies would fix, as an incentive to expand their facilities, and now they are pressing for even higher rates because their costs are going up, too.

WILLIAMS objects, however, that storage charges paid by the Government have gone up one-third to one-half since 1950 on most grains and cotton. He doubts rising costs are the sole reason.

So now Congress wants to know who is collecting what, why, and how from the storage program, and what kinds of checks and records the USDA maintains, if any. A full-scale House investigation is getting underway.

Uncle Sam himself owns $234 million worth of storage bins, capable of holding 1 billion bushels, besides the 225 Liberty ships which have been pressed into storage use.

Supervision of storage activities has grown into a vast bureaucracy of 6,300 Government employees. Interest costs on tax dollars tied up in surpluses run $375 million a year; freight charges add another $200 million.

Despite everything the Eisenhower administration has done or tried to do, the total budget of the USDA has more than doubled since 1952—from $3.2 billion a year to $7.3 billion.

Today Federal farm expenditures are the largest single nondefense item in the entire national budget. Much of this spending benefits businessmen more than farmers.

But, in all, U.S. price support and farm income stabilization programs cost the American taxpayers $3.2 billion last year, and are costing $5.4 billion this year, and $4.4 billion next year.

Next year's billion-dollar decrease, however, will not hold if 1959 crops measure up to the record 1959 harvest. And nothing Congress can do this year could take effect in time to prevent the rising tide of surpluses from surpassing $10 billion next year.

Actually, laws passed by Congress are largely responsible for much of the surpluses.

Four-fifths of American agriculture is free of Federal controls. It is the other controlled fifth which is running amuck and causing most of the farm problem.

Of the 250-odd commercial crops in the United States, the prices of only 12 are fixed by law at arbitrarily high levels. These 12 crops account for most of the surplus—corn, cotton, and wheat comprising 85 percent of the stockpile.

High price supports provide irresistible incentives to big farmers to overproduce—to farm for the Government.

Government-guaranteed prices and markets induce farmers to plant more of the wrong crops—supported crops already in surplus. And acreage controls induce them to get more from every acre, by using all possible mechanical and scientific means.

Similar minimum national acreage allotments which result in surpluses over all our needs also are prescribed by law for cotton, rice, and peanuts.

This year the USDA expects another near-record wheat crop, when we already have enough on hand to last 2 years. Much the same is true of corn and cotton.

Sometimes farm laws work in other strange ways.

Take wheat and cotton again. These two crops show how farmers have beaten production controls, and how the law underwrites inefficiency in agriculture.

In 1954, the southwestern States were cut back to 65 percent of the 1952 cotton acreage, but they still grew 88 percent of their 1952 production.

Meantime, 23 eastern States have increased their share of U.S. wheat production from 20 percent to over 30 percent with only 17 percent of the national wheat acreage allotment.

Both of these feats were accomplished through mechanization, irrigation, fertilization and other new technology. Farmers simply made each acre produce higher yields.

But there's a little more to the story, at that—

Legal loopholes, cleverly written into control laws, also help farmers overcome acreage limitations, and promote production of crops in areas least suited to them.

Wheat controls, for example, are based on acres harvested, not planted.

So a farmer can overplant his allotment and later plow under the poorest-looking acreage. Or he can go ahead, harvest it all, pay a penalty on the normal yield, and make a tidy profit.

The key word is "normal." When actual yields run higher than normal yields, farmers who overplant can really reap a windfall.

Last year, actual yields in Kansas hit 27 bushels of wheat per acre, compared with a normal yield of 15 bushels over the last several years.

So Kansas farmers who planted and harvested more than they were supposed to had to pay a penalty on only 15 bushels from every acre more than their allotment. They got the other 12 bushels an acre penalty free.

As a result, crop yields have shot up spectacularly, and they are still climbing.

The average yield of an acre of wheat, for example, has doubled since Congress set the national wheat acreage at 55 million acres in 1938.

That acreage allotment is still in effect today, but farmers averaged 27 bushels per acre last year compared with 13 bushels when the acreage was fixed.

Even with only normal yields—the average for the 1950's has been about 18 bushels per acre—the 55-million-acre national wheat allotment will now produce a surplus over all our domestic and export needs.

And if these farmers elected to put their 12-bushel excess per acre into storage, to sell off in future years when their yields fall below par, they didn't have to pay any penalty at all.

Besides this built-in overproduction bonus, any farmer can harvest up to 15 acres of wheat without having any allotment or paying any penalty. And he can plant as much as he wants to if he plows under all but the best 15 acres before harvest time.

This is the so-called 15-acre exemption which is spreading the wheat belt all over the Nation.

Result: Wheat acreage has had to be cut back in the most efficient producing areas of the Great Plains, and one-third of the wheat surplus now comes from 15-acre plots.

Similarly, cotton controls perpetuate allotments in the South, when the mechanized and irrigated Southwest can grow more and better cotton at lower unit costs.

One-third of the cotton allotments are, five acres or less, confined largely to the South. Price supports are set high enough so these small producers can stay in business.

Yet cotton production is rapidly moving west.

Despite laws designed to the contrary, cotton acreage has increased 85 percent in California, Arizona and New Mexico since 1938, while decreasing 40 percent in the South.

To arrest this trend, some Southern Senators introduced this year a bill to keep cotton allotments in the South when a farmer quits or dies, instead of letting this acreage go to the more efficient farms of the West.

Of course, there's always the other side of the coin.

In the case of cotton, there's the Southern economic, sociological and welfare costs to pay if cotton-growing is allowed to go west. These considerations may well offset the efficiency argument.

The USDA has managed to move much of the surpluses which have resulted from strong supports and weak controls into domestic welfare programs and foreign trade.

In the last 7 years more than 10 billion pounds of surplus foods have gone into domestic welfare programs. Since mid-1954 the USDA has done a $15 billion business in surpluses abroad, giving away what it can't sell.

In the last half of 1958 alone, 1.5 billion pounds of surpluses were donated to benefit 14 million children involved in school lunch programs, 5 million needy in 44 States and 1.4 million inmates of State institutions.

Efforts are underway to dispose of more surpluses through domestic relief programs, but foreign outlets are fast drying up.

Once the United States held 60 to 70 percent of the world cotton market, but now we can claim only 20 to 25 percent.

The United States share of world trade in flue-cured tobacco, our major export tobacco, is expected to drop to 33 percent this year, compared with 43 percent over the years 1947–51.

Here again high price supports are responsible to a large degree, because they hold world prices up and stimulate foreign competition.

Foreign cotton production has doubled since 1949 while U.S. production held constant; foreign tobacco production has climbed about one-third while U.S. production dropped substantially.

Cotton is sold abroad by the USDA at world prices, with the taxpayer absorbing a $40 loss on every bale. Due to international complications and implications, we have to announce our export price a year ahead, inviting foreign competitors to underbid us.

Result: In 1956–57 we exported 7.5 million bales of cotton, last year 5.5 million, this year only 3 million—because we have already announced we will cut our prices again next year and buyers are holding off.

Tobaccco prices are the only ones still supported at a full 90 percent of parity, and due to the curious workings of parity computations they have a tendency to keep rising slightly but steadily.

Every 1 percent increase in tobacco prices, under this peculiar arrangement reduces the blend of U.S. tobaccos in foreign cigarettes by 3 percent as well as the blend of U.S. tobaccos in U.S. cigarettes.

Result: Southern Rhodesia, no longer Winston-Salem, N.C., is now the world's largest tobacco market, and Canada is coming on fast.

At home and abroad, then the U.S. is finding that high price supports don't pay; they cost us dearly in heavy taxes, falling farm income and markets, and rising surpluses.

Payments over million listed to firms for storing cotton

(Calendar year 1955)

Federal Compress & Warehouse Co., Memphis	$10,976,000
Gulf Atlantic Warehouse Co., Houston	1,135,000
Union Compress & Warehouse Co., Memphis	1,266,000
Traders Compress Co., Fort Worth	1,144,000

PAYMENTS OVER $2 MILLION FOR STORAGE OF SURPLUS GRAIN

(Calendar year 1955)

Cargill, Inc., Minneapolis	$9,613,000
Archer-Daniels-Midland Co., Minneapolis	7,966,000
Burrus Mills, Dallas	7,495,000
Union Equity Co-Op, Enid, Okla	6,949,000

Payments over million listed to firms for storing cotton—Continued

PAYMENTS OVER $2 MILLION FOR STORAGE OF SURPLUS GRAIN

(Calendar year 1955)

Continental Grain Co., New York	$6,258,000
C-G-F Grain Co., Topeka	3,497,000
Farmers Union Grain Terminal, St. Paul	3,398,000
F. H. Peavey & Co., Minneapolis	2,860,000
Kimbell Milling Co., Fort Worth	2,229,000
Bunge Grain Corp., New York	2,143,000
Norris Grain Co., Chicago	2,020,000

PAYMENTS OVER $3 MILLION FOR STORAGE OF ALL SURPLUSES

(Calendar year 1958)

C-G-F Grain Co., Topeka	$14,787,000
Cargill, Inc., Minneapolis	13,226,000
Union Equity Corp., Enid, Okla	6,453,000
Archer-Daniels-Midland Co., Minneapolis	6,240,000
Continental Grain Co., New York	5,834,000
Harvest Queen Mill & Elevator Co., Plainview, Tex	5,514,000
Federal Compress & Warehouse Co., Memphis	4,447,000
Goodpasture Grain & Milling Co., Brownfield, Tex	3,677,000
Farmers Union Grain Terminal, St. Paul	3,328,000

The Steel Industry Freeze on Collective Bargaining

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. PUCINSKI. Mr. Speaker, this afternoon I had the pleasure of hearing an address by Mr. David J. McDonald, president of the United Steel Workers, who spoke before a luncheon of newspapermen at the National Press Club.

Mr. McDonald presented his union's position in the current negotiations between the United Steel Workers of America and the steel industry.

So that the Members of Congress may be fully informed on all aspects of the current negotiations, I am taking the privilege of inserting Mr. McDonald's remarks in the RECORD.

The steel industry is undoubtedly one of the cornerstones of our national economy and I am sure that the outcome of the present negotiations is of deep concern to every American. I hope that my colleagues will take the time to read Mr. McDonald's penetrating analysis of the current negotiations as he sees them from his very important vantage point as President of the United Steel Workers Union.

It is my firm conviction that, upon studying the position of the United Steel Workers, we will all have a better understanding of the present negotiations in the steel industry.

Mr. McDonald's remarks follow:

THE STEEL INDUSTRY FREEZE ON COLLECTIVE BARGAINING

(Address by David J. McDonald, president, United Steelworkers of America, to the National Press Club, Washington, D.C.)

Let me say at the very outset, gentlemen, that I am thoroughly aware we are here today for a more serious purpose than breaking bread and exchanging pleasantries.

Since I am not in the mood for pleasantries and I know you would not want me to engage in any reckless appraisal of the situation in the steel industry negotiations, I would like to tell you the facts of the matter as they really exist. As representatives of the Nation's news media you want to learn as much as you can about these negotiations, to keep the public informed. I want to tell you as much as I can for exactly the same reason.

I am certain you would like to know where we stand in our negotiations with the steel industry.

I will tell you straight from the shoulder what has been happening in our negotiations in New York. I am being completely frank when I report that our private discussions have gotten nowhere. I tell you this in the hope that an informed public opinion will help break this logjam.

For 3 weeks we have been engaged in a form of collective bargaining. Four distinguished representatives of the basic steel industry have been meeting on an almost daily basis with four representatives of our union. I repeat—we have been meeting. But I emphasize—it would not be proper to say that we have been bargaining.

There has been an absolute refusal by the companies to bargain in good faith. Industry thus far has merely gone through the motions of collective bargaining.

There you have the whole story to date about the meetings that have taken place between the companies and the union.

Genuine collective bargaining has been the objective of the United Steelworkers from the very beginning. But the position of the companies from the outset has been very simple—there is nothing to bargain about and therefore no reason to bargain.

As far back as April 10, long before actual negotiations got underway, the companies submitted by letter an offer of minus zero. They have never changed their position. They offered a contract extension which would freeze wage rates for a year and, as well, eliminate even the protective clause against rises in the cost of living. This is not an extension. This would be a retreat.

During all of the sessions held so far in New York the industry's position has remained the same. We have not bargained about anything. The industry team has explored the union's various suggestions as to needed improvements. We have not explored the companies' position because there was nothing to explore.

That, I repeat, is the status of our negotiations as of right now. Industry's negotiators still are encircled by that zero.

I am also certain that a summary of the union's position in these negotiations is of primary interest to you and the general public.

By a peculiar brand of Alice-in-Wonderland arithmetic, the steel industry seeks to convince Americans that:

1. Labor's wages are almost solely responsible for inflation.

2. Steelworkers' wages and benefits already are far too high and any further gains would be at the expense of the rest of the Nation's workers.

3. Steel profits are too low and have been declining.

4. Productivity gains are created by management and stockholders, and workers are not entitled to any consideration.

5. Labor's wages are solely responsible for a purported import-export imbalance.

There are the principal points in a shell game used to bewitch and bewilder the American public in a sustained campaign which I candidly admit has not been without effect. But let's quickly examine some facts made public under the hard scrutiny of Government agencies or put into plain view through industry's annual reports and data of the American Iron & Steel Institute.

Are labor's wages responsible for inflation? First, let me say that we concede that runaway inflation is a menace and a problem. But we charge that industry has made a monster out of the word. I have said before and I repeat now that the steel industry's cry of inflation is phony.

The steel industry complains that the alleged wage-cost push has created inflation by forcing prices ever upward in order that business can keep going. American Iron & Steel data show that, from the first half of 1955 to March 1959, payroll cost per ton of steel shipped for all employees—not just production and maintenance workers—rose by only $9.31 per ton as compared to a rise of $34.18 a ton in steel prices.

There is not the slightest reason why the outcome of the steel negotiations should worsen the problem of inflation. Unjustified price increases in the past have contributed heavily to inflation which has created problems for people. Current financial reports reveal alltime record profitability of such magnitude that a cost increase several times the size of past settlements can be absorbed and still leave net profits at a record high, with no steel price increase.

In the first quarter of this year, at an average operating rate of 82.6 percent, United States Steel Corp. could have sold its steel shipments at $18 per ton less, and still earned a net profit after taxes equal to an annual rate of return of 6.8 percent on net worth.

I believe, gentlemen, that most everyone in this room would deem that a satisfactory return on almost any sort of investment short of outright usury. And I believe that these facts serve to explode the myth that wage costs must necessarily cause inflation. Mind you, since World War II there have been 23 steel price increases against 12 wage raises. For every dollar of wage cost, steel has upped its price ante by $3 per ton.

The Kefauver committee report also contains well-documented conclusions that administered steel prices have increased unjustifiably; that these have had no relationship to steel wage increases and have served to enlarge already wide profit margins.

When I say the steel industry's cry of inflation is phony I mean that the steel industry is guilty of using a legitimate problem in an illegitimate manner.

Have steelworkers' wages and benefits been too high? And would further gains be at the expense of the rest of the Nation's workers?

Certainly the steelworker, along with wage and salary earners as a whole, has increased his purchasing power in post-war years. But not at the expense of others, as the industry charges. And not in the fantastic proportions of top management with its stock option benefits.

Actually, progress for the steelworker has helped rather than hurt the purchasing power and living standards of others. All the gains won by steelworkers have been spread to all employes of the industry, whether or not they are members of our union. And while the steelworker is currently being made the whipping boy for all of our fancied economic ills, he also stands as a bell-wether in any effort to achieve new planes of human betterment. All other Americans will feel the impact if the steelworker does not obtain his just due. The precedent of standing still will be reflected in the pay envelopes of virtually every major group of wage and salary workers in the Nation.

Gentlemen, this may be deemed oversimplification. But I have not yet heard a successful rebuttal to our claim that only human beings buy goods. Neither machines, nor unemployed, nor inadequately paid workers can buy goods and without consumer purchasing power our national production is a total waste and a total loss.

Management still clings to the trickle-down philosophy where the major share of earnings and dividends repose in the hands of the few while a figurative bone is thrown to the mass of people.

We've heard industry spokesmen say that labor's earnings make it impossible for industry to make an adequate profit on its investment. We would like to know what amount the industry deems to be an adequate profit. So would the Kefauver Committee, which has tried to elicit that information from my distinguished predecessor on this stand, Roger Blough, chairman of the United States Steel Corp.

Needless to say, the answer to that one is still top secret. Perhaps any sort of answer would cause too much embarrassment in the face of a series of record profit years, capped by another near peak for United States Steel in the recession year of 1958 when the industry was operating at not quite 60 percent of capacity and hundreds of thousands of its employees were out of jobs.

By some peculiar sort of statistical magic industry beats its breast in simulated woe over a purported increase of 288 percent in employment costs as compared with a 30-percent increase in shipments since 1940. But there is strange silence on the fact that in the same period profits, before taxes, were up 606 percent; net profits were up 378 percent and net profits per ton of steel were also at an alltime record high.

It is true that since 1940 payroll costs have risen. Considering all employee costs, that rise has been $37.70 per ton—considerably dwarfed by the $92.91 per ton rise in steel prices over the same period.

We feel that it is somewhat brazen for an industry which already has reported first quarter profits in alltime record figures to plead that it is not getting enough. We await with interest the second quarter returns which are expected to set another new record.

It's been alleged by industry that productivity gains are created by management and that workers are not entitled to a share. Our union has never laid claim to all of the benefits of increased productivity. We insist, however, this is an important factor in wage negotiations and the steel industry's position represents an attempt to retain all of the benefits for stockholders and management. While the precise contribution of labor to higher productivity is difficult to measure the fact cannot be obscured that workers do make a definite and indispensable contribution and are, therefore, entitled to a share of the gains from rising productivity.

Carried to its logical conclusion, industry's position would mean that as output per man-hour grows year after year profits, dividends, and management compensation would grow by leaps and bounds, while workers as a group would receive a diminishing share and the declining few individual workers would be chained to a static standard of living.

A week ago in this forum much was made of the fact that steel imports exceeded steel exports for the first quarter of this year for the first time in history. Sounds menacing on paper, doesn't it?

But those who sought to make propaganda hay of this so-called foreign competition conveniently forgot to point out that much of this foreign business resulted because their own mills, setting production records, simply could not fill all of the orders in a tremendous upsurge of business. Much of that business, I might add, was generated at the outset by a "scare buying" philosophy arising from the industry-planted fear that there might be a midsummer steel strike.

Let me quote a highly regarded syndicated financial columnist. This authority writes:

"American firms are not hungry for business. They're prosperous. They can sell most of what they make at home, so they don't need to compete pricewise with foreign firms. If a steel company, for instance, were to shave a price to take business from a foreign competitor it would have to shave prices to all its customers. It doesn't take the order, then complains that foreign labor costs less than American labor."

We have said repeatedly that among the principal reasons for the alleged foreign competition, particularly stressed in Japanese reinforcing bars, barbed wire and nails, has been the failure of American industry generally to modernize obsolete mills. American companies which modernized have been able to meet this foreign competition and have not lacked for orders.

Perhaps the simple truth is that an industry which regards administered prices as competitive and which for 50 years has been unchallenged in the world markets, is out of practice at the old-fashioned art of selling a good product at a reasonable price. And perhaps foreign firms are satisfied with more modest profits.

I'm afraid the mighty steel industry is running like an elephant from a mouse. Introducing competition into this noncompetitive industry might be a constructive thing.

I hope that the brief conclusions I have drawn here will help this audience to detect and to discount some of the fallacies in the steel industry's position.

We have made what we believe to be fair and reasonable proposals in our contract negotiations with the industry. We have maintained, as always, a degree of flexibility. We have entered these negotiations with a desire for genuine collective bargaining and a full sense of our responsibilities to the Nation as well as to our own members. I have already told you what attitude we have been met with by the industry negotiators.

Despite this apparent intent on the part of the industry negotiators to listen politely and no more, we of the United Steelworkers still hold the earnest hope that we will reach an agreement as far in advance of our contract deadline as possible.

We who speak for the United Steelworkers do not want a strike. The union has never wanted a strike. We will do all in our power to avoid a strike.

There is no reason for a strike to take place if reason and moderation prevail in genuine collective bargaining.

Wilkes-Barre Publishing Company Wins Safety Award

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article and

an editorial from the Wilkes-Barre Record of Tuesday, May 26, 1959:

PUBLISHING COMPANY WINS SAFETY PLAQUE—1,216,930 HOURS WORKED WITHOUT DISABLING INJURY

Wilkes-Barre Publishing Co. yesterday received an unusual plant safety award in recognition of its 300 employees having established a safety record of 1,216,930 hours of operation without a disabling injury.

The award, an attractive stainless steel and walnut plaque, was presented to Harrison H. Smith, president of the publishing company, by James F. Malone, executive vice president of Pennsylvania Manufacturers' Association Casualty Insurance Co., at a ceremony in the publishing company's conference room. Participating in the ceremony were other executives of the publishing firm and PMA as well as foremen of various mechanical departments in the plant and some union representatives.

Malone, in presenting the top PMA safety citation, said it marked the first time in the history of the insurance firm's award program that a newspaper publishing firm was able to qualify for the coveted million-hour plaque.

"This award—the first of its kind—is a tremendous achievement and I am very happy that I am able to come here today and present it to you," said Malone. "It is made possible only when everyone in the plant from the top down to the bottom is conscious of one's safety and the safety of the person next to you," he added.

The plaque was made possible by employees of the publishing company, publishers of both Wilkes-Barre Record and Times-Leader. The Evening News, establishing a safety record of 1,216,930 hours of operation without a disabling injury between January 18, 1957, and February 21, 1959.

To give one an idea of the accomplishment, Malone said, it would require one person's working 500 years without an accident in order to achieve a 1 million-hour plaque.

"It is no sacrifice on my part to come here today and award you this safety plaque," Malone said, adding:

"If all our insured plants had no injuries, we'd be the most successful insurance company in the business. Accidents can be prevented, but workers must be made safety conscious. By the same token, if the same care were taken on the highways that we find in the plants, the needless slaughter of thousands would be reduced considerably.

"When we think of the newspaper publishing business, we automatically visualize frequent rushes to meet deadlines and last-minute changes. Since we who are interested in safety know that speed and accidents usually go hand in hand, we congratulate the Wilkes-Barre Publishing Co. for a very outstanding safety achievement in keeping a perfect safety record alive for more than 2 years.

"Safety—whether in the factory, on the highway, or in the home—benefits the community by preventing physical suffering and wage losses to its citizens. It is gratifying to see Wilkes-Barre Publishing Co., a molder of public opinion, in the forefront as a leader for industrial safety."

Smith, in accepting the top PMA award, said:

"On behalf of the 300 publishing company employees, I wish to say that we appreciate the honor very much. I assure you the plaque will be displayed prominently. I hope that we will be in line for a similar award sometime in the future."

SAFETY AWARD PRIZED

Wilkes-Barre Co. and its employees are proud of a safety award received yesterday from Pennsylvania Manufacturers Association Casualty Insurance Co. The award is in recognition of an accident prevention record without precedent among newspapers insured through the Pennsylvania Manufacturers Association. The inscription on the plaque notes that Wilkes-Barre Publishing Co. employees had worked a total of 1,216,930 manhours without a disabling injury.

Some 300 employees contributed to this record. The plaque is a tribute to unfailing regard for the safety of themselves and their fellow workers. The achievement's significance was limned by James F. Malone when he said it would require one person's working 500 years without an accident to earn a 1 million hours' plaque. Mr. Malone, of Pittsburgh, executive vice president of the casualty company, and who was in Philadelphia yesterday, deemed the plaque ceremony in Wilkes-Barre of sufficient note for him and other high officials of the company to be present.

We prize the award and cherish the record making it possible.

Congressman W. F. Norrell Receives Well Deserved Honor

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. BENNETT of Florida. Mr. Speaker, on May 25 I inquired among my colleagues as to where our beloved colleague, BILL NORRELL, might be as he is always present on the floor and I missed him on that particular day. Upon inquiry I have found out that he was absent while receiving a distinguished alumnus citation from Arkansas Agricultural and Mechanical College. I think that all of my colleagues in the House join me in happiness that this well deserved honor has been bestowed upon Congressman NORRELL. We know him to be a great statesman, and I am happy to include at this point in the CONGRESSIONAL RECORD the citation of the college so well deserved by him.

ARKANSAS AGRICULTURAL AND MECHANICAL COLLEGE,
OFFICE OF THE PRESIDENT,
College Heights, Ark., May 25, 1959.

DISTINGUISHED ALUMNUS CITATION

It is proverbial that a prophet is without honor in his home country. But the reverse has been true of Congressman WILLIAM F. NORRELL. In his home county—and he is claimed by two adjoining counties—he has endeared himself to a host of friends through his exemplary life and his selfless devotion to the public good. A grateful constituency in 13 counties has elected him to Congress 11 times.

Born in Milo, Ashley County, W. F. NORRELL enrolled in Arkansas A. & M. College when it was a regional agricultural school. His formal education was continued at the College of the Ozarks and at the Arkansas Law School in Little Rock.

After some years of law practice, Mr. NORRELL was elected to the State senate in 1931. He served for 8 successive years, and on several occasions functioned as acting Governor.

As Congressman from the Sixth District since 1938, W. F. NORRELL has been in every sense a Christian statesman. Thanks to his alertness, his district has received its due share of consideration in the matter of locating Federal projects. To cite an instance best known locally, his efforts were responsible for the locating in Monticello of a prisoner-of-war camp. And in 1943, he secured for Arkansas A. & M. College a Navy V–12 training program which not only utilized the facilities of the college in wartime, but provided academic training for some 860 prospective Navy and Marine officers.

In 1922, Congressman NORRELL was married to Miss Catherine Dorris, daughter of a Baptist minister and valued in her own right in Monticello and in the National Capital for outstanding talents in service and leadership. Mr. and Mrs. Norrell, with their accomplished daughter Judy, spend much of their time in Washington, but they consider Monticello their home. Here they have identified themselves most helpfully with religious and civic organizations.

Congressman NORRELL, the alumni of Arkansas A. & M. College take pleasure in the thought that our college may have served you usefully near the beginning of your career.

Now, therefore, by the authority vested in me as president of Arkansas Agricultural and Mechanical College, and upon recommendation of the board of trustees, I cite you, WILLIAM F. NORRELL, as a distinguished alumnus of this college.

HORACE E. THOMPSON,
President.

Marked Tree: Pattern for Model Industrial Development Program

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. GATHINGS. Mr. Speaker, the May issue of Arkansas Municipalities, the official publication of the Arkansas Municipal League, an organization of mayors and other city officials in Arkansas first established in 1934 to build Arkansas, carries a splendid account of one community in eastern Arkansas under the title, "Marked Tree: Pattern for Model Industrial Development Program."

For the benefit of Members unacquainted with eastern Arkansas, Marked Tree is a city of some 3,000 alert and active citizens working together to build a better community. It derives its name from a habit of early Indians in the area of notching a tree in that vicinity to denote a short portage between the St. Francis and the Little Rivers in Poinsett County. When the railroad was built into that area the name was retained, and in 1897 the community was incorporated under that name.

Marked Tree has always been an important farming center. And, in recent years, the city government, the civic organizations, the business community, and the cooperating citizenship have moved to balance this agricultural economy with industrial development. This article indicates the success of this community endeavor, and it is a real pleasure to bring to the attention of the Members the outstanding work of civic-minded people from a good little city in the alluvial Arkansas Valley:

MARKED TREE: PATTERN FOR MODEL INDUSTRIAL DEVELOPMENT PROGRAM

In recent years farmworkers have been replaced by farm machinery. One man on a

tractor can plow as much as 10 men with mules, and 1 operator on a cottonpicker can harvest 2 bales (more than 3,000 pounds) an hour while a hand picker was getting 300 pounds a day.

In every phase of agriculture the story has been the same. The need for farmworkers has declined and the farm operators had no choice but to make the fullest possible use of machine power. This, perhaps more than any other one thing, created the need for industry to provide jobs for the people who could no longer find work on the farms.

It was the young people who were leaving their towns seeking to make a living elsewhere. Business and civic leaders realized they could not afford to lose these young people, and set about industrializing their towns.

The citizens of Marked Tree realized their town needed industry and the climax was reached last year when two manufacturing plants were dedicated the same day.

The first mention of the town's need for industrial growth came in 1948 when the chamber of commerce conducted a clinic to determine civic and economic needs. The results were tabulated and the wheels of progress began to turn.

The first job at hand to attract industry was the improvement of housing, schools, and streets. Many of these improvements were made, and in 1952 the chamber of commerce appointed its first committee on industrial information. While this committee took inventory and published its first findings, the town continued to make the improvements necessary to catch the eye of industrial executives.

In 1955 the East Poinsett Industrial Corp. was formed. This corporation surveyed industrial sites and made arrangements to obtain necessary land if and when a new factory should come knocking. The first industrialist to visit did not locate in Marked Tree but others came. One wanted to set up a factory to manufacture shorts, and so the Mart Manufacturing Co. was formed. The citizens of Marked Tree raised approximately $200,000 to help finance the plant construction.

Later, Gotham Chalkboard & Trim Co. picked Marked Tree as the site of its new plant. This required a local investment of about $100,000.

Both plants are located in an industrial area that was planned for factories. There is room for more industries and the leaders have not ruled out the possibility that other factories will be built. In fact, Marked Tree believes that the two factories are only the beginning.

Last year approval was received from the Federal Housing Authority for a program of slum clearance and development designed to remove about 350 substandard houses These will be replaced with improved houses and a section of land will be used for a park and another section for potential industrial development.

This is the way Marked Tree has met the challenge of the agriculture revolution.

Lot More Space in West Than Population Alarmists Realize

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks I should like to include in the RECORD an article by William H. Nelson, associate editor of the Grand Junction, Colorado, Daily Sentinel. I think Mr. Nelson's comments concerning population and space will make interesting reading for those easterners who are completely unfamiliar with the West. Mr. Nelson's article also includes, incidentally, some excellent tips for eastern "pavement pantywaists" who may be vacationing in the West this summer. The article follows:

LOT MORE SPACE IN WEST THAN POPULATION ALARMISTS REALIZE

(By William H. Nelson)

What the westerner reads about burgeoning population and dwindling space for people to live in, and what he sees traveling about the wide open spaces of Western States do not jibe.

Articles about the impending population explosion and pieces written in favor of the wilderness bill argue that there is now so little room left that in a few decades there will be inadequate space for ordinary living much less for solitude.

The wilderness bill proponents decry the fact that the present national parks and monuments are so crowded with tourists that they defeat their purpose.

Perhaps the Westerner needs to visit the megopolis areas of the Eastern States to appreciate fully how cities, suburban developments, industries, and highways are gobbling up the countryside. Perhaps the population alarmists and wilderness bill boys should forsake their ivory towers and travel over the unpublicized West. Maybe all would learn quite a bit.

MISS SCENIC AREAS

Most tourists and many longtime residents who travel the main roads and visit only the national parks, national monuments, and private commercial developments never see vast areas of scenic beauty—canyons, rolling hills or picturesque mesas, many only short distances from the main highways.

Colorado National Monument is only a minute part, for instance, of the vast canyon country west of Grand Junction. Nature lovers interested in weird sandstone formations would have a delightful time in any one of dozens of canyons west of the monument in Colorado. If we add canyon country of Utah and Arizona, the possibilities of suitable places for communing with nature are beyond inventory.

How much of the wilderness of the Colorado Plateau—and other parts of the West—could ever be changed from ranching, mining, and recreation to farming, industry, or housing will remain a mystery, at least for the present. We won't attempt to predict what will be necessary in future years, but certainly helicopters, machines powered by atomic energy for purifying and pumping water, and other inventions yet to be made would be necessary to put to ordinary uses the desert primeval of the plateau country.

We do not share the fears of wilderness bill proponents that there will be a person on every rock within a few years. There are just too many rocks piled up in patterns as numberless as snowflakes.

PAVEMENT PANTYWAISTS

A few canyons and gorges have received national and international publicity. But for every one that is known to the public, there are hundreds known only to livestockmen, ardent hikers, and persons who have seen them from the air.

Most tourists and even many residents of the West are pavement pantywaists. They decline to leave the oiled roads to venture onto mesas, through forests, or into canyons away from the plush motels, fancy restaurants, and supermarkets. Too many sightseers breeze through a national park in a few hours, missing the pleasures of side trips to more distant points of interest.

North Dakota Bankers Support Garrison Diversion Unit

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. BURDICK. Mr. Speaker, all segments and sections in North Dakota support the Garrison diversion unit. A resolution adopted by the North Dakota Bankers Association on May 9 of this year, which is included herein, points up the necessity and feasibility of the project.

RESOLUTION OFFER FOR ADOPTION AT THE 1959 CONVENTION OF THE NORTH DAKOTA BANKERS ASSOCIATION, AT MINOT, N. DAK., MAY 9, 1959

Be it resolved by the bankers of North Dakota, assembled in convention at Minot, N. Dak., this 9th day of May 1959, That the following resolutions and declarations of policy be added to those previously adopted; and

That the officers and member banks alike be guided by them, and wide distribution of them be made and that copies of these recommendations and resolutions be forwarded to the appropriate persons.

Whereas the development of the Garrison diversion project in North Dakota will provide: (1) for the irrigation of over 1 million acres of land in central and eastern North Dakota periodically afflicted by drought thereby stabilizing the agricultural production from this area, (2) an assured and adequate water supply for over 40 municipalities and in addition many new industries, (3) water to replenish lakes, rivers, and streams throughout the area enhancing their use for recreation, fish and wildlife, municipal and many other purposes; and

Whereas the development of the Garrison Diversion Project will bring new opportunities for economic growth and stability to the project area, the State, and consequently the Nation and according to conservative estimates will result in: (1) An increase of $54 million annually in North Dokota's farm income, (2) an increase of $145 million annually in trade and business activities, (3) 1,700 new business establishments, (4) 3,600 new farms, (5) 20,000 new job opportunities, and (6) an increase in population in the area of 100,000; and

Whereas the benefits that will accrue through the development of the Garrison Diversion Project will extend to all sections of North Dakota as well as to areas throughout the Nation by providing: (1) A broadened tax base in the project area, (2) a nearby bountiful feed supply to nonirrigated sections of the State, (3) opportunities for industrial development throughout the area, and (4) a greater demand for products manufactured at far distant points; and

Whereas the North Dakota Bankers' Association is vitally interested in the economic stability of North Dakota and the development of the resources of the State for the greatest possible benefits to all the citizens of the State and Nation: Now, therefore, be it

Resolved by the North Dakota Bankers' Association at its convention duly assembled in Minot, N. Dak., this 9th day of May 1959, That this association recognizes the value of the many benefits that will be derived from the Garrison Diversion Project, not only to the project area, but also to the entire State of North Dakota and the Nation, and therefore urges the Congress of the United States to approve the Garrison Diversion Project

and appropriate the necessary funds to bring about the construction of the project facilities at an early date.

Memorial Day, 1959

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. SHORT. Mr. Speaker, all too often nowadays, Memorial Day comes and goes without our giving much consideration as to why we observe this holiday, what it means to our country and its people, and what it means to us as individuals. Memorial Day was first conceived to remember the heroes of the Civil War. Since that time it has become a day upon which remembrance is given to all loved ones who have passed on—but primarily it is a day devoted to the memory of members of our Armed Forces who have given their lives for their and our country. What is it that has brought us into war and what were these heroes fighting for—we have never fought a war to gain additional territory—we have never fought a war to gain economic advantages for this country—we have never fought a war to impose forcibly our system of government on another country. The basic premise that the United States of America was concerned with in all of its armed conflicts was freedom—a word that we have become so accustomed to that I fear many of us fail to appreciate its true significance.

When our Nation was founded in 1776, a new idea was introduced that was the first fundamental change that had been made since government was first formalized. It was a completely new idea.

What was this new idea? Was it the regular election of government leaders by the people? Was it the wide dispersal of the powers of government among Federal, State and local units? Was it the American method of checks and balances? No—these had been conceived by the Greeks, the French, or the English. Our new Government recognized the premise that in this new land the Government should be "of the people, by the people, and for the people." No other nation had ever gone so far to establish the right and duty of free citizens to manage their own governmental affairs.

This was a revolutionary concept of Government. Never before in history had the people said to the Government, "Thou shalt not." Always the Government had been able to say to the people, "You may," or "You must." Very specifically, the Bill of Rights comprising the first 10 amendments to our Constitution set out the powers of the Government and plainly stipulated that these were the only powers with which the Government was endowed, and that all others were reserved to the States or to the people.

It was this philosophy of individual freedom and individual responsibility that attracted to this country millions of persons from government-oppressed peoples all over the world. They represented every color, every race, and every creed. They were in search of personal freedom, not Government-guaranteed security. They earned and enjoyed here the greatest degree of security ever enjoyed by any people anywhere.

People who came to this new land wrote back to relatives praising the freedom they had found. They said here the Government guarantees you nothing except life, liberty, and the right to own whatever you have honestly acquired. Here you have the responsibility that goes with individual freedom. There is no law or custom that prevents you from rising as high as you are able. Here in America, you can do as you please so long as you do not violate the rights of others to do as they please.

Such comments would not be completely true today because that freedom for which our forefathers fought so hard and for which many of our young men have laid down their lives is slowly but surely being lost. It just seems to be seeping away slowly, and none of us seem inclined to abandon our pursuit of the almighty dollar long enough to repair the damage that has been done. The Bill of Rights still exists on paper, but the spirit that caused it to be written is surely fading away.

Under this plan of government, the people of this Nation have done well in a material way. Here we are—6 percent of the world's population on 7 percent of its land. A conglomeration of races and bloodlines with no more natural resources than many other areas of the globe—creating as much new industrial wealth as all the other 94 percent combined. One hundred and seventy some million of us own nearly six times as many automobiles as the other 2 billion people on earth combined. We produce and consume about as much steel as all the rest together, and own similarly fantastic proportions of bathtubs, telephones, refrigerators, and tractors and most of the other manifestations of prosperous living.

We produce enough foodstuffs on our farms and ranches to provide ourselves with the world's highest standard of living plus a surplus large enough to feed millions of people in foreign countries.

Our accomplishments are indeed fabulous and yet we know that men will not necessarily risk their lives, their fortunes, and their sacred honor for bathtubs or automobiles. America had no such luxuries in 1776, and it was a principle rather than a material gadget for which our forefathers were willing to lay down their lives.

We know that the spirit which makes and is America—the spirit which has inspired and made possible our amazing achievement—has been able to flourish only because of a system of government deliberately established to protect the right of the individual citizen to make his own decisions, to accept the responsibility for them and the consequences of them, and to establish his own personal pattern of life within the limits of trespass upon the rights of his neighbor.

No one person is to blame for sapping that spirit of individualism. No one political party is to blame. The people are as responsible as the elected and appointed leaders. It is we, the people, who seem to have forgotten that freedom and responsibility are inseparable. It is we, the people, who are discarding the concept of government that brought forth the Constitution and the Bill of Rights.

In short, few of us seem to want to keep government in its proper place which is out of our personal affairs and responsibilities. Many of us seem to favor various types of government-guaranteed and compulsory security—we say that we want personal freedom, but we demand government housing, government tax concessions to industry, to business, government price guarantees plus the controls that must go with them, government-guaranteed jobs and wages. We boast that we are responsible persons, but we vote for candidates who promise us special privileges, government subsidies, and so-called individual security.

Such schemes are directly contrary to the spirit of the Bill of Rights. Our heritage is being lost more through weakness than deliberate design. The Bill of Rights still shines in all its splendor but many of us are looking in another direction.

Many of us are drifting back to that old concept of government that our forefathers feared and rejected. Many of us are now looking to government for security. Many of us are no longer willing to accept individual responsibility for our own welfare. Yet personal freedom cannot exist without individual responsibility.

Thus the American people are on the verge of a final decision. We must choose between the destruction caused by government paternalism and the security insured by individual freedom with individual responsibility as expressed in the Bill of Rights. There is no other choice.

As it must, the choice rests with each of us as individual Americans. No one can tell us what to think or do; no one should. To do so would be a violation of both the spirit and the words of the Bill of Rights. As responsible persons, each of us has the privilege and the obligation to pursue what each considers to be the right course of action. But this above all—let us understand the meaning of these actions.

Without the possibility of failure, there is no meaning to achievement; without the possibility of sickness there is no meaning to health; without the possibility of hell there is no meaning to heaven. If a parent continues forever to make choices for a child, the child will never be mature and will never be free. If the State is given power and responsibility to make decisions for men, and thereby to save them from any re-

sult of making personal choices, the people never attain political freedom and moral responsibility.

It seems to me that we who are now enjoying the benefits of the supreme sacrifices made by our soldiers and sailors should not forget what this principle was that prompted them to be willing to fight to establish and in our later wars fight to preserve. They have passed on to us a responsibility that we must not fail in carrying out. Ours is not to take up arms in defense of freedom, but to exercise our duty now as responsible citizens. Responsibility and freedom are the reverse sides of the same coin. Neither can exist independently of the other.

The American patriots that we are remembering today have passed on to us a responsibility to carry on the defense of those principles upon which this Nation was founded. The words of Maj. John McCrae, the English army officer of World War I, who later give his life for his country, express the responsibility that is ours better than any I have been able to put together. In his immortal poem "In Flanders Fields" written on the battlefields of France, he said:

We are the dead
Short days ago we lived, felt dawn, saw sunsets glow
Loved and were loved but now we lie in Flanders Fields
Take up our quarrel with the foe
To you from failing hands we throw the torch
Be yours to hold it high
If ye break faith with us who die
We shall not sleep, though poppies blow in Flanders Fields.

Poison in Your Water—No. 87

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Courier Times, New Castle, Ind., of October 9, 1958, entitled "What Industry Asks in Plant Locations."

The article follows:

WHAT INDUSTRY ASKS IN PLANT LOCATIONS
(By Frank A. White)

What industry wants when it seeks a new plant location was explained to Hoosiers in a coldly factual manner by John H. Chiles, Jr., vice president and manager of the Transformer Division of Westinghouse Electric Corporation.

He spoke at a planning conference set up at Purdue University by the State Department of Commerce, Industry and Publicity and the Indiana State Chamber of Commerce. Here are the highlights.

There are more than 4,000 communities of 2,500 population or more in the United States. They have 225,000 miles of railroads along which plants could be located, and 300,000 miles of regular truck lines. Each of the 4,000 communities considers itself best suited for new industry.

All of these are good customers of an industry. The pressure is so terrific that many industries turn to a plant locating service and work in closest secrecy in finding a new plant location.

There are literally hundreds of factors considered in plant location. Here is a sheet from an actual report on a city seeking a new plant. While it had many economic and social conditions needed, it flunked one vital necessity. The report showed the city had:

(1) Labor supply more than adequate, several times more than actually needed. (2) Labor rates fair, with low turnover. (3) Good sites on highways and railroad lines at very reasonable prices. (4) City was large enough to soften impact of change of supervisors' families who moved to new location. (5) Had parochial and public school systems, Christian and Jewish houses of worship.

CAREFUL STUDY OF ASSETS OF A TOWN

6. Shopping facilities good. 7. County free of debt—indicating stable tax rate. 8. Water, electricity, gas, sewerage, and railroad facilities available at property line under consideration. 9. Interstate trucking available. 10. Vocational schools willing to enter into training programs. 11. City has definite plan for attracting new industry which can fit community needs. 12. Hotel facilities adequate, as well as train and plane service. 13. Community genuinely wanted Westinghouse as an industrial neighbor. (There is a vast distinction between wanting the payroll and wanting the industry.)

All this looked favorable. The field team, after a long trip, saw this sign in the hotel lobby: "Water Shortage, Waste Not, Want Not." That sign, and the facts it revealed knocked out any further consideration of the town for a new plant.

Adequate labor supply is not a cold economic factor. In addition to skills, or those who can be trained, attitudes, character and ambitions of men and women available are studied. They must have a spirit of fairplay, cooperation and teamwork.

An industry wants to pay its way, a fair share of cost of government. Direct taxes on business are a factor in operational costs and competition. A company fears instability worse than anything else. Some towns change their tax rates to encourage industrial expansion, realizing a new business must walk before it can run, and it may make little, if any money for several years. Some communities exempt new industries from property taxes for 5 years, to give the manufacturer a chance to get his business on a paying basis.

There is no "right man" to pressure in a big industry in getting a new plant. The product department manager makes final decision on new site for the manufacture of his product line in Westinghouse.

Considered are availability of raw materials; distribution of product; climate; distance to other large plants of Westinghouse, or to competitors' plants in same area, and now dispersion of plants for security reasons among other factors.

If the industry makes a mistake in new plant location, the community shares the ill effects. Communities can be harmed by too rapid influx of new industry, where regular community services can't keep pace, or sometimes, by too many industries of the same kind.

On June 20 last, Westinghouse selected Muncie as location for a new transformer plant.

Other speakers on the annual conference at Purdue showed that Indiana is getting far more than its share of new plants, compared to other States.

Recognition of Irving Senzel

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. ASPINALL. Mr. Speaker, Irving Senzel is a career civil service employee in the Bureau of Land Management, Department of the Interior, who is favorably known to many of us in the Congress. He is a student of public land matters and is highly experienced in the administration of the public land laws. He has always given freely of his unusual talent to assist Members of Congress in studying legislative proposals affecting public lands and to present testimony before the Committee on Interior and Insular Affairs.

Mr. Senzel has been stricken with a severe heart attack and he faces the prospect of a very long period of convalescence. I am sure that my colleagues join me in wishing him speedy return to health and a long period of continued outstanding public service.

Under leave to extend my remarks in the RECORD, I include the following outline of Mr. Senzel's career:

PERSONAL HISTORY OF IRVING SENZEL

Mr. Senzel was born January 9, 1914, at Rochester, N.Y. He completed his elementary and high school education there, and graduated from the University of Rochester in 1935 with a B.A. degree in economics. He was elected to Phi Beta Kappa. He did graduate work as a research assistant in economics at the university of Rochester and also took additional credits at American University, Department of Agriculture Graduate School, and the Department of Commerce In-Service School.

Mr. Senzel's first employment was with the Civic Committee on Unemployment in Rochester where he did statistical work in connection with a social and economic study of the city's high school students and in connection with unemployment and relief. He entered the Federal civil service in August 1938 as a junior clerk at the Bureau of the Census, and in September 1939 transferred to the General Land Office as an assistant statistician. He rose through the various grades through demonstration of his outstanding capabilities, and in 1944 was made assistant chief of the research and analysis division of the General Land Office. He completed a program for the training of supervisors of the Department of the Interior in 1946, and in December 1947 he was promoted to the position of Chief, Economic and Statistical Research Division. He was promoted again in January 1951 as a principal staff officer of the Division of Land Planning, and in October 1957 he was elevated to his present position of lands officer in the Lands Staff Office of the Division of Technical Programs, Bureau of Land Management.

Mr. Senzel received two superior performance awards in 1949 and in 1956 and an outstanding performance rating. He was selected by the Secretary of the Interior to attend the economic mobilization course of the Industrial College of the Armed Forces, which he completed in June 1952. He was cited by the commandant for displaying during the course exceptional initiative, enthusiasm and energy in his studies and other activities of the college. The commandant stated, "He has brought to the college an

understanding and knowledge of the responsibilities and problems of the Bureau of Land Management which have helped to broaden the base of our studies. He is sound in his analysis of complex problems dealing with economic mobilization, and is practical in his approach. His work here has been outstanding in every way." As a result of his attendance at ICAF he was detailed by the Secretary of the Office of Defense Mobilization for 60 days to prepare estimates of the effects of an attack upon the United States for evaluation by the National Security Council and for mobilization planning by all agencies.

Statement of Hon. Robert W. Hemphill Before the Civil Rights Subcommittee

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF CONGRESSMAN ROBERT W. HEMPHILL BEFORE THE CIVIL RIGHTS SUBCOMMITTEE OF THE SENATE JUDICIARY COMMITTEE ON WEDNESDAY, MAY 27, 1959

Thank you for having more hearings on this question than you originally planned. It is in the best American spirit to allow all to be heard. I want to thank you, also, for letting me come this morning.

A month or so ago, on the 29th day of April, I appeared before a Subcommittee of the Judiciary Committee of the U.S. House of Representatives. I asked the members of that subcommittee, including the chairman of the Judiciary Committee, to declare a moratorium on civil rights legislation. I told that committee that the continual prodding of the civil rights controversy by a Supreme Court in disrepute, and a Congress which neglects the consuming danger of inflation, was and is, detrimental to race relations all over this country. I lay at the feet of civil rights proponents and their fellow travelers, the "do-gooders," the blame for the violences which are erupting in increasing numbers all over this fair land. The decline in race relations since the great mistake incorporated in the Black Monday decision of May, 1954, a political philosophy, has been emphasized by sporadic outbursts of increasing frequency, and violence. If there be any statesmanship left, it should be exerted in the direction of quenching the fires of mistrust and race hatred instead of promoting such base purposes.

Let us see what has happened to the country and to its economy during these days of political wrestling between the parties to see who is going to get credit for the hyprocisy of passing a civil rights bill. Everybody wants to "get credit"—and tomorrow when the history of this shameful parade of insincerity is exposed, men will ask each other how such hypocrisy could have reached such proportions.

Last week we had before the House a housing bill. Previously, a housing bill had failed because a Congressman from New York inserted a civil rights provision. When the civil rights provision was offered in the housing bill this year, every Negro Representative voted against it. They knew it would wreck and beat the housing legislation. Is this not signal recognition that this question soils where it touches, that the injection of the civil rights question into or onto any other question ruins both. Civil rights is a cancer which has, since I have been in this Congress, sapped the legislative strength of the Congress, and mirrored the political dishonesty of an administration which used bayonets because it had no sufficient statesmanship or judgment to offer at Little Rock.

Yes, just last week we considered the housing legislation in the U.S. House of Representatives. I have cataloged what happened in that debate. I do not need to tell you that in many of the areas of this country, as long as the housing units contain either all white or all of some other race, little difficulty arises. Once someone of a different race moves in, immediately the rents go down, the desirability falters, and the value declines. If you do not believe that is true, take an honest look at the city of Washington. Ride along some of its beautiful streets and see what has happened since this city has been mongrelized in the manner that it has. This, the Capital City of the World, confused, scarred, and ruined by the byproducts of the race question.

If I thought there were any sincerity of hope that this question could be solved by legislation, I would hasten to try to forge that legislation. I know that it cannot be solved by legislation, and I think you men who are the Senators of this land, know that too. I hope the Supreme Court knows it. If we could just hope for some enlightenment in that Court, our hope for renewal of justice, and a return to the high position that that Court occupied, would be encouraged.

Let us look at what else has happened. Under the false hope that they will be bettered by moving into the metropolitan areas, thousands and thousands of our Negro population have moved into the great metropolitan centers. What has happened? There are not enough jobs for them. Their conditions are not improved by the fact that they can ride on a streetcar with somebody from another race. Their standards of living are not better. Their education is, in most instances, inferior to that which they received back home, and they are ripe for juvenile delinquency, crime, and corruption. It is not their fault, either. It is the fault of people who have been pushing this question, either for their own selfish interest, or to get votes, or to further the Communist cause. That is the situation from a racial standpoint, and those of this Congress who are from the cities know that to be true. I do not ask them to admit it. I feel sorry for those men in politics who have to give lip service to civil rights, knowing that in their hearts they have not the courage to run on real and patriotic issues. I thank the Almighty I do not have to deny my people the true beliefs of my heart in order to get elected.

When I was discussing this question sometime ago, someone asked me what I thought of the bombings. I told them that I thought bombing people in the night, or bombing temples or churches or societies is wrong, and it should be punished. In every State that I know of, such is punished. The hue and cry to put the FBI into the picture is a political hue and cry, so that those who propose all sorts of measures can go back and beat their chests, and tell Negro voters what they did for them. Someday somebody is going to tell the Negro what they did to him by making his vote a political pawn, and his race relations a mockery in the process.

I would vote for any legislation to stop bombings and to stop race violence. Violence has not been the answer to any of the world's problems. Time after time, we have fought wars, and in which we have resorted to violence to express our views or our purposes. More often than not, violence has been desultory and has not improved any situation.

Then there is the problem of race consciousness. The fact that the race question makes headlines every day, and the greatest parliamentary body in the world is constantly besieged by the question, incites a race consciousness which is not good. People who have been accustomed to going to segregated schools, satisfied, helped and guided in those schools, either become dissatisfied, or wonder why schools should be integrated, or if they should be integrated. Thus, dissatisfaction comes into the picture to replace satisfaction.

Again, I lay it at the feet of the Supreme Court, those Members of Congress, and the "do-gooders", who have incited these difficulties.

Nowhere in the United States does the Negro get as much consideration in the courts of justice as in those States where the schools are segregated. You see, I have lived with the Negro, and I know him. I know him better than you, because I have never been a hyprocrite with him and told him that I was going to put him in a school with white children or raise his social status. I have been honest with him, and he has come to trust and believe what I have had to say. Then, as prosecuting attorney, I used to lean over backward to make sure that a Negro had a little bit more mercy and a little bit more protection, because I recognized the fact that he might not have as much education and that he might need the protection of the courts. That was my record, but it was no exception either in South Carolina or throughout the Southland. We just did it that way because we knew that it was right, and it was our tradition.

At the hearing over in the House Judiciary Committee, when my distinguished Governor, Governor Hollings of South Carolina, came up and testified, on the same day he testified before this subcommittee, there came to the hearings an old Negro man from my district. He had come up to visit some of his people here in the Washington area and he came by my office and asked if could go to the hearings, that he wanted to see what our Governor looked like. We gave him directions as to how to get to the hearings and I saw him sitting up there and I went over and spoke to him. I asked him what he thought about the whole picture, and he said that the colored folks didn't want any integration—the white folks at home had treated them mighty good. After that hearing he came by the office and asked me for a little piece of money. It was no exception. I expected it, and he got a little piece of money. I had never seen him before and I did not know him and I am a southerner who believes in segregation. But I gave him a little piece of money. I am trying to illustrate something for you here, and I am trying to show what you are trying to destroy.

Recently, in one city, a Negro patrolman was the cause of a disturbance in the police force. I did not go into the details, and I shall not name the city. I am sorry they had that trouble. All it points out is that you cannot legislate social equality, and while I do not know the policeman involved, I do believe that if the Negro had shown himself to be worthy of the joint patrol the white policeman would have welcomed him. How so many who have been elevated to the high office of Congress could be so blind, I cannot fathom. We in the South know, and have long recognized, that the Negro must promote his own progress. We have made it possible for him to do so. Have others—or do they want his vote, and despise his progress?

I assume, and I hope, that every man sent to the Congress and to the Senate is sent because his people have confidence in him and want him to think and to work for the good of the Nation. I am thinking of the

talents possessed by the Members of Congress and the Members of the Senate that I know, and how well those talents could be channeled into good works, instead of wasted in this row over civil-rights legislation. I had hoped that we had learned the lesson from the farce of 1957, and the fact that the Civil Rights Commission is impotent, useless, and an unnecessary and expensive burden on the people of this country. The only thing good I can say of it is that it did not become the tool of communism that some wished and expected, which is more than I can say of some others.

What about inflation? Are you letting inflation take us over, or why are we fooling around with this civil-rights question?

What about our defense picture? Are you satisfied? I am not. I am worried, and badly worried. I am especially worried since I heard of a speech that Mr. Teller, a leading scientist, made out in the West, in which he said that by the year 2000 Russia would certainly be in the forefront. Are we today spending so much time on civil rights that we could be spending on something else? I challenge you, I challenge this Congress, and I challenge the courts of this great land to return its thoughts and its energies to preserving our freedom, marshaling our strength, preparing our people, and cataloging our resources to victory in cold war or hot, that these free people may live better and peacefully, and produce, in the future, generations equal to their time and their responsibilities of world leadership in good works and Christian purposes. I stand ready to do my part, and to that end I make this bold statement today.

What about defense? We all know that there is a lot of fat in the defense spending. I am not privileged to be on the Armed Services Committee. I wish I were, as I would start asking a lot of questions.

I could name many problems to which we could turn our talents so much more profitably than this civil rights question.

And so, Mr. Chairman, if you would give us a moratorium, and we turn our thoughts to other matters, I am sure that the Nation would be benefited, race relations would be improved, and the violence would gradually decrease. I urge you and this committee to use your statesmanship in this direction.

If we dare, let us face the realities of the existence of white and Negro as citizens of a United States. The white man wants innumerable necessities and an abundance of luxuries. He is no stranger to hardship or sacrifice, either by heredity or experience. Horatio Alger inspired a generation before mine. Today I find in the Halls of Congress many men who pride themselves in the fact that they delivered papers, stoked furnaces, took up laundry to get an education. Thank God they did not look to their Government for some fool legislation to protect themselves from discrimination, because they were poor, orphaned, or suffered hardship. I do not apologize for the fact they had to work for a living—I glory in their American spirit.

The Negro must earn his place or he cannot keep or expect it.

You cannot help him by hypocritical legislation, nor longer inspire him by obedience to a desire for his ballot. He has been misled, fooled, propagandized in the past, today his education and the fine communications of a great Nation bring him the truth, and that truth is that each major political party of this Nation has diverted from high purposes and soiled its shield of honor to get votes—God help us if we do not reform. Some think this world is waiting for a revolution in creative thinking on the race question. I tell you today the Negro is sick of his role as the football of every pink, liberal, or fool, who deceives him by false promises, lies to him about equality, and, underneath, fears him as an opponent in some city ward in a metropolitan area.

I speak as a partisan. I admit my emotion to segregation. I am happy that I owe no apologies to anyone. The fact that I emphasize a truth of our generation will, I am sure, be cauterized by some of the press, ignored by others. I am neither radical nor extreme. Yet, I am tempted since the departures of those who fail to understand our program inspire a position aggressive and positive.

This is our land—would you destroy it? One sure way is to bow your head down to the idol of civil rights, and glow in the acclaim of the foolish. Here in Washington are many, most of them desire our demise as an international leader, who will shout your name, put you in the paper, and get you called a statesman, if you will yield to their desires.

Give lipservice to this hypocrisy—every organization which is a Communist front will hail you. You will get honors, medals, certificates and honorariums. Every time I pick up the paper I see where some one is getting a special recognition for his "heroic part" in promoting civil rights legislation. The paper always omits the great hero's part in promoting racial tensions and racial hatreds.

Let us see what the races really want.

The white man, Negro, yellow man, red man—all want peace. Turn the efforts of this committee, its staff—turn the money spent on propaganda—into the channels for peace see how much good can be done.

All races want jobs, security. Are we as a nation letting productive power—which foundations security—falter, while we wrestle back and forth with a political civil rights question cheapened by hypocrisy? What are we to do if we have a depression? Will civil rights legislation prevent a depression—help us economically in any way? Of course not.

All races want justice. Today justice in this land gives even measure to white or black or any other race. Civil rights legislation does nothing to promote justice. How can you expect anything good from a civil rights statute which the average white man despises and the average Negro does not understand? How far will the leaders of this country depart from reason to do political homage to the NAACP and other Communist-inspired and Communist-infiltrated organizations?

I could name other desires. I will not. I invite your great brains to high purposes.

I have made some strong statements here. They are strong because they are true, and it is time somebody took the wrappings off of truth.

The Negro in my country is accepted as a citizen—he votes, worships, trades, rides, plays—as he pleases. His schools are as good as any in the Nation. We hope to preserve these freedoms for him, preserve and further the pleasant race relations that now exist. Help us by using your statesmanship now to turn our national thinking from this race question to questions more productive.

Loyalty Affidavit Required by the National Defense Education Act

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. SMITH of Kansas. Mr. Speaker, several weeks ago I put this item in my newsletter:

Here is another matter that disturbs many of us because it shows the methods of fellow travelers and their constant efforts to ridicule patriotic Americans who attempt to teach and preach our basic American doctrines of loyalty to our country.

Last week I received a petition supposedly signed by 50 faculty members of the University of Kansas City, Mo. This faculty petition asked that the students applying for Federal loans to continue their education be not compelled to sign a loyalty oath in order to get a loan. By this petition you have faculty members who indicate that they think it is wrong for anyone to be required to state he is not a Communist or affiliated with any subversive group. Anyone doubting the existence of this petition can get a photostat copy by writing me. It would be most interesting to know just who promoted this petition in the Kansas City University.

Mr. Speaker, as usual we received several letters that said I was doing a disservice to the cause of education—and were severely critical of anyone who would publicize the faculty for sending in this petition—because it was all done in trying to maintain the right of freedom to teach in the classroom.

I wonder at such a statement—to me such a statement is far from the truth—and it always raises grave doubts in my mind for anyone to make such a statement. There is no such thing as absolute freedom.

I did, however, receive one reply to my comment on this Kansas City University petition that is so different and so outstanding that I append it hereto. I do not know the writer, but I am sure that if we had more students with the ability to think and analyze today's problems as does the writer of the appended letter, America's future would be in much safer hands. The writer of this letter is a student at the University of Kansas. His comments are so to the point in issue, I commend it most highly and it is to be noted he states he is one of the recipients of the benefits of this exchange program. His letter follows:

LAWRENCE, KANS., *May 22, 1959.*

Representative WINT SMITH,
House Office Building,
Washington, D.C.

DEAR MR. SMITH: I just want to take a few minutes out of final examination week to make a comment about something I read in the paper yesterday. I am referring to the letter or petition signed by the Kansas City University professors criticizing the loyalty affidavit required under the national defense education act. The article I read did not fully explain the situation, but if the professors were objecting to that loyalty oath signed by students who are granted the loans, then perhaps you might be interested in the views of a recipient of such a loan.

I am now enjoying the advantage of such a loan, and with great pride and willingness I signed the loyalty oath. I believe that such a requirement can be easily justified.

In the first grade I began giving the pledge of allegiance to the flag, and ever since then I have been willing and anxious to publically declare my loyalty to this country at any time to any body. I find it difficult to understand the reasoning of those who find it distasteful, or immoral, or unjust to pay verbal respect to what other men have died for—the United States. It seems to be the popular thing to do among certain groups to object to any display of patriotism. But I cannot believe that all people think this way. This letter is just to let you know that not all do.

I realize that such people as the professors at K.C.U. object to such an oath because it is compulsory. But to a degree compulsion is necessary to maintain the very freedom they claim to support. It is a well-known old saying that to maintain liberty, we must have restraints, or else the liberty descends to license, which is the loss of liberty for others. Of course this is not applicable to the current issue, but it does demonstrate that requirements, and rules, and compulsion are not inimical to freedom. What possible objection can a man have for being required to declare that he will not be unfaithful to the very institution which provides him with his freedom? Surely the government which protects him can expect this much in return. It is not demanded that he not try to change the government, but only that he follow the law in his attempts.

But of course there is even greater reason for requiring a loyalty oath for these loans. No one in the country is required to apply for the loan. This is simply a contract situation. When a party offers a loan subject to certain conditions, no one who accepts the offer has any right to object to the terms. The simple answer is to just not accept the offer. If a man wants to sell me his car at a very reasonable price, provided I give him a ride, I can't buy his car and then honestly complain about giving him his ride.

The requirement for the loan is such a simple one—just to not be disloyal to the nation. I wonder if these same professors would object to a man who would give them each a sum of money if they would promise not to shoot him in his sleep. I think that the situations are analagous.

Of course it is argued that such an oath is meaningless. It is said that any disloyal person would sign anyway, so that it is merely a burden on the conscientious citizens. I suppose the disloyal will sign, but this in no way affects the justification of requiring it for all who apply. It would allow prosecution for those who did falsely sign.

But there is even a greater reason for the faithful to sign. It makes us stop and think. That was the first time since I took my oath of allegiance for military service that I publicly declared my loyalty. It gave me a thrill. When I read that oath, and signed my name, I thought about what it meant. It was a reminder of my American citizenship, and though it may seem just childish sentimentality to some, to me there was real pride in signing.

Let me make it clear that I don't propose to speak for anyone but myself. But I did want to let you know that not everyone feels as the professors evidently do, and that I respectfully take issue with them. I regret that I did not have the time to work out my thoughts in a more coherent manner, but with the press of exams, I felt that I could spare only the time to sit down and type them out as they came to mind. But you no doubt can see my purpose, and that is all that is necessary.

Respectfully,

Dulles Eulogy

SPEECH
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. COHELAN. Mr. Speaker, I wish to convey deepest sympathies to the family of John Foster Dulles—from my constituents in the Seventh District of California and for my family and myself.

We sense that people throughout the world, in a quiet moment, have paused to look toward Washington where John Foster Dulles has passed away. In that alone there is greater tribute than we can pay here.

Rev. Dr. Joseph J. Gavenda Honored on 25th Anniversary as Pastor of St. Joseph's Church in Hazleton, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news article from the Hazleton Plain Speaker, Monday, May 25, 1959:

DR. GAVENDA HONORED BY ST. JOSEPH'S PARISH FOR QUARTER CENTURY OF SERVICE AS PASTOR

Parishioners and friends of St. Joseph Roman Catholic Church honored the Reverend Doctor Joseph J. Gavenda on his 25th anniversary as parish priest with a testimonital dinner in the school gymnasium last night.

Five native sons of the parish were officers at a special silver jubilee mass held at 10:45 o'clock Sunday morning at which approximately 1,000 people were in attendance. The event marked the beginning of a spiritual bouquet for the pastor from members of the parish he has served for a quarter century.

Father Gavenda received three tributes in the form of a Papal Blessing, the parish spiritual bouquet and a purse from the parish groups and individuals.

Following a talk by Rev. Jerome Pavlik, O.F.M., Franciscan Friary, Easton, Father Gavenda expressed his gratitude to the parishioners, priests, honored guests, and other individuals for the honors bestowed upon him. He concluded his remarks by saying "Not unto us O Lord, but unto Thy name give glory."

Father Pavlik spoke on the power of a priest who for the past 25 years as pastor has held the immortal souls of St. Joseph parishioners in his hand. "Your presence is an undying tribute * * * that Dr. Gavenda has performed his most consecrated job well," he told those at the dinner. He reminded them that they should say thanks for a spiritual job done perfectly."

It should be the thought and wish of everyone here * * * that we beg almighty God to spare our beloved pastor Dr. Gavenda for many many more years * * * Congratulations Dr. Gavenda and God bless you," were the closing remarks of Reverend Pavlik.

The children of the parish presented three special musical selections during the testimonial dinner, entitled "Jubilee Tribute," "Jubilejni Pozdrav," and "Honor to Our Pastor." Accompanists were Miss Cecila Koval and Miss Anita Gabos.

Mayor S. Thomas Capparell presented the reverend doctor with the key to the city while DANIEL J. FLOOD, Congressman, and Judge Paul Selecky, juvenile court judge, spoke for the county and upon the good works the priest accomplished with youth of the community.

The parish tribute was given by Rev. Cyril M. Hudak, assistant pastor. Invocation was by Rev. Cyril J. Rable, and benediction by Rev. John S. Marinko, assistant pastors.

Charles Kapes presented the tribute from St. Ladislaus Mission parish.

George Gavenda, a brother of the guest of honor, made a presentation in behalf of the priest's family.

Numerous congratulatory messages were received from priests and friends, including Judge Bernard Brominski, Common Pleas Court, Rev. James Bolger, Rev. John Koval, Rev. John Bednarczyk, and the Thomas Fedor family of Harrisburg.

Honored guests were: the Doctor's brothers and sisters, Mr. and Mrs Frank Soltis and family, Pittston; Mr. and Mrs. John Skovira and family, Jessup; Mr. and Mrs. Joseph Pitoniak and family, Jessup; Mr. and Mrs. John Gavenda and family, Clifton, N.J. and George Gavenda and family, Trenton, N.J.; who made a presentation on behalf of the family.

Mr. and Mrs. Joseph Fenstemacher, Hon. and Mrs. Leo Kubitsky, Dr. and Mrs. Emil Martyak; Mr. and Mrs. Robert Walsh; Mr. and Mrs. Nick Bonomo; Mr. and Mrs. Andrew J. Hudak, parents of Father Hudak; Sheriff and Mrs. Joseph Mock; Mr. and Mrs. A. Sarosky.

Seated at the main table were: Father Drogowski, pastor of St. Stanislaus; Father Francis Vilha, pastor of Sts. Cyril and Methodius, Clifton, N.J.; Father Leo Gardzalla, assistant pastor, St. Mary's Allentown; Father Rable; Father Pavlik; Father Joseph Tomicek, pastor of St. John the Baptist, Throop; Father Hudak; Mayor and Troop; Father Hudak; Mayor and Mrs. Capparell.

The five sons of the parish; Father Marinko; Father Cassian Yuhas, C.P., Holy Family Monastery, West Hartford, Conn.; Father Andrew Rentko, S.V.D., Divine Word Seminary, Girard, Pa.; Father Michael Gaydos, assistant pastor, St. John's, Freeland; Father Andrew Chupela, assistant pastor, St. Mary's, Uniontown.

Additional priests present were: Father Stephen Gurcik, pastor of St. Stephen's, Plymouth; Father Andrew Diugos, pastor of St. Michael's, Jessup; Father Michael Frohman, pastor of St. John's Freeland; Father Louis Pilati, pastor of Holy Rosary; Father Michael Vetter, pastor of Holy Trinity; Father Henry Luchi, pastor, Our Lady of Mount Carmel; Father Joseph Pilny, pastor, Sts. Peter and Paul's Plains; Father Francis Zolcinski, pastor, St. Stanislaus, Wilkes-Barre; Father Anthony Kozlowski, pastor, St. Mary's, Nanticoke and Lt. Col. Father John Hlopko, chaplain U.S. Army.

An estimated 800 people attended the dinner.

The Silver Jubilee mass was celebrated by Rev. Dr. Gavenda, with Rev. Andrew Rentka, S.V.D., Sacred Heart Seminary, deacon; Rev. Andrew A. Chupela, St. Mary's Nativity Church, Uniontown and Rev. Marinko, master of ceremonies. Rev. Cassian Yuhas, C.P., Holy Family Monastery, West Hartford, delivered the sermon. Minor officers were altar boys of the St. Joseph parish with music by the girls choir, under the direction of the Sisters of Saints Cyril and Methodius. Organists were Miss Rosemary A. Yuhas and Miss Benedicta V. Marinko.

Keenotes

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 19, 1959

Mrs. KEE. Mr. Speaker, under leave to extend my remarks in the Appendix of

the RECORD, I include my newsletter which was released today:

KEENOTES

(By Representative ELIZABETH KEE)

The House this week approved legislation to extend the life of the Renegotiation Act. Newspapers paid very little attention to the debate. In fact, the business press alone seemed to recognize the significance of the legislation and to report the debate fully.

What is the Renegotiation Act? It provides the means whereby our Federal Government can recover excessive profits from firms awarded Government contracts. During the past 4 years an average of about $140 million per year has been recovered by means of this act.

As long as we as a Nation must continue to spend billions of dollars a year on defense, there will be a need for legislation to protect the taxpayer against unreasonable profits for firms which provide goods and services to the Government. Many contracts, particluarly for the development and production of missiles and other new weapons, cannot be awarded on a low bid basis. The work is too specialized. Negotiations offer the only sensible way for the Government to arrive at an agreement with the contracting firm.

But negotiated contracts can return tremendous profits to the contracting companies. That is why our Government must have some way of recovering any excess profits.

Records of the Renegotiation Board reveal that industry and business have voluntarily returned to the Government millions of dollars which they believed represented excess profits. In other cases, Government and business could not agree. The Renegotiation Board then stepped in to use the law passed by Congress to arrive at a settlement.

AREA REDEVELOPMENT BILL BEFORE RULES COMMITTEE

Thus far, the House Rules Committee has not cleared the area redevelopment bill (S. 722) for debate on the House floor. There is danger that this urgently needed legislation may be bottled up in the committee for the rest of the session.

In this connection, I was interested in a recent comment by Miss Sylvia Porter, one of the best known and most able financial writers in the country, in a recent newspaper column:

"It's obvious that most chronically depressed areas in such States as Massachusetts, West Virginia, Pennsylvania, Michigan, are not going to be able to rejuvenate themselves without Federal aid. The difference between the administration and the Democratic leadership is not over the need for area assistance and redevelopment legislation. The differences are over how to aid and how much to aid. Now—before we get into trouble again—is the time to rescue this legislation from the political bog, put it through, make it work."

The Senate has already passed this legislation, thanks in a large part to our two West Virginia Senators, Mr. RANDOLPH and Mr. BYRD. The House Banking and Currency Committee, after lengthy hearings, amended the Senate bill and recommended that it pass.

The recent improvement in the overall economic picture has led many people to the mistaken belief that the worst is over and area redevelopment legislation is no longer needed. Those of us who have introduced and strongly supported this legislation are doing everything within our power to convince members of the Rules Committee of the need for action in the immediate future on this legislation.

Panama Canal Society, Washington, D.C.: Historic Meeting

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. FLOOD. Mr. Speaker, one of the most widely discussed questions before the Nation and the Congress today is the control and jurisdiction of the Panama Canal, which since the Suez crisis of 1956, has been under sustained political attacks. Dramatized by such incidents as the 1958 Panamanian flag planting in the Canal Zone an the 1959 invasion of Panama by Cuban revolutionaries, these attacks have had one prime purpose—wresting control of the great interocean waterway from the United States.

This objective, it should be noted, has been part of a long-range program of the international Communist conspiracy since 1917. Current efforts to advance it have presented foreign policy problems of portentious import not only for the United States and Panama but also for all maritime nations that use the Canal.

Thus, Mr. Speaker, it is most significant that the 24th annual luncheon meeting of the Panama Canal Society of Washington, D.C., on May 16, 1959, at the Sheraton-Carlton Hotel in the Nation's Capital, to honor Gen. and Mrs. Robert E. Wood and the other old timers of the Canal construction era, was devoted to reminiscence of his Isthmian service, and the theme of "Communist and the Panama Canal."

This society, which I had the honor to address on May 12, 1956, when it honored former Chief Engineer John F. Stevens, consists of former Panama Canal officials, engineers, and others connected with its construction or its subsequent operation, maintenance, sanitation, and protection. Thus, the members include personnel of the Armed Forces, Public Health, and Foreign Services, who have been stationed on the Isthmus and, incidentally, know its problems and hazards at first hand.

The officials of the society, 1958 to 1959, were Stephen Latchford, president; Frank M. Hill, vice president; and Clarence L. Chapin, secretary-treasurer. The committee on arrangements consisted of Hon. Maurice H. Thatcher, chairman; Joseph A. Cheeseman, and Frank M. Hill.

Distinguished guests included: Congressman William K. Van Pelt, of Wisconsin, member of the House Committee on Merchant Marine and Fisheries; Maj. Gen. Glen E. Edgerton, former Governor of the Panama Canal; Brig. Gen. Bonner Fellers, former strategic planner in the Southwest Pacific, World War II; Dr. Charles S. Collier, professor of law emeritus, George Washington University; John J. Daly, editor and author; Dr. Donald M. Dozer, historian, University of Maryland; Harry W. Frantz, Latin-American correspondent, United Press-International; Col. Wallace M. Hale, chaplain, U.S. Army; Dr. Louis M. Sears, professor of history emeritus, Purdue University; Vice Adm. John F. Shafroth, Naval Historical Foundation; Mrs. Gaillard Sherman Rogers, Trinity College, Washington, D.C.; Mrs. Ruth Shipley, former Chief of Passport Division, State Department; Dr. Louis L. Williams, secretary of the Gorgas Memorial Institute of Tropical and Preventive Medicine; and John M. Littlepage, well-known Washington attorney.

Other personages in the large assemblage were: Capt. Miles P. DuVal, well-known historian of the Panama Canal and author of the celebrated Terminal Lake-Third Locks plan for its modernization; Col. Pierre Gaillard, son of the late David D. Gaillard, the former member of the Isthmian Canal Commission after whom Culebra Cut was renamed; Mrs. Maurice H. Thatcher, a "first lady" and distinguished hostess on the Canal Zone during construction days; Mrs. Aileen Gorgas Wrightson, daughter of Gen. William Crawford Gorgas, the great sanitarian of the Isthmus; and Mrs. Ben Jenkins, president of the Ladies Auxiliary of the Panama Canal Society.

A very pleasing feature of the occasion was the program of Latin-American and other musical selections.

The occasion was indeed notable and appealing to students of both canal history and current problems. It is gratifying to note that General Wood mentioned key figures in Panama Canal construction: John F. Wallace, the pioneer engineer; John F. Stevens, its basic architect; and George W. Goethals, a principal builder.

Though the builders of the Panama Canal gained great fame and have been acclaimed many times, I quote these eloquent words on the printed program of the meeting from the gifted pen of Governor Thatcher:

Because of the vital and enduring monument they wrought the builders of the Panama Canal will long live in the history of the world and the memory of mankind.

I am very grateful to General Wood for his gracious reference to myself Representative WALTER, and others named by him, and thank him therefor.

The assemblage being called to order by the president, Stephen Latchford, who presided until the end of the luncheon, the invocation was delivered by Col. Wallace M. Hale, Chaplain, U.S. Army, as follows:

INVOCATION BY COL. WALLACE M. HALE

Our Father, we are grateful to Thee for the challenging and demanding tasks in life. We remember especially those here assembled who have had a part in literally moving mountains and spanning continents. May the remembrance of their sacrifice and accomplishment be a signal and a guide for the citizenry of our Nation, as, today we look into space and its challenge for us.

Today we meet in honor of a great cause—a benefit rendered to all mankind. May the spirit of these men who built the Panama Canal be ours as we look toward Berlin, Moscow, Geneva, and to the rest of

the world. May the spirit of this country who makes this work available to all men of good will be continued in us in all our dealings in the future. As we bring the world closer together, may we learn to live with each other and become brothers in the best sense of the term; learning to use all that Thou has given to us.

Bless our fellowship today.

Bless this food, and may this memorable occasion be both pleasing to Thee and pleasant to us.

In the name of Christ, we pray. Amen.

Next, there came singing of the first and last stanzas of "America," accompanied by the orchestra; then the pledge of allegiance, led by Col. George S. Brady, U.S. Army, retired. This was followed by "In Memoriam" and silent reverance to deceased members of the society and old timers, with their names given by Roger S. Erdman, life members of the society.

At the close of the luncheon, President Latchford presented Governor Thatcher as toastmaster. In his remarks of presentation, President Latchford spoke of Governor Thatcher's public service on the Isthmus, and afterwards in Congress; also of his various visits to the Isthmus including that of last November when, accompanied by his wife and many old timers, including President Latchford, they went to the Isthmus at the invitation of the Canal Zone Governor, General Potter, for a week's stay and participation in the centenary program of the anniversary of President Theodore Roosevelt's birth. He also spoke of Governor Thatcher's substantial aid to the Society through its existence, and of his beneficial services to old timers through the years.

Thereupon, as toastmaster, Governor Thatcher welcomed all in attendance at the luncheon meeting, and later introduced guests at the speakers' table, as well as distingiushed guests in the audience.

His introduction of Gen. Robert E. Wood as guest speaker follows:

REMARKS OF GOVERNOR THATCHER IN INTRODUCING GENERAL WOOD

We are most fortunate, indeed, to have with us today a man who has greatly distinguished himself in the business world, but who, for 10 years, or more, on the Isthmus, made an outstanding record in important official positions in the construction organization of the Panama Canal.

Born in Kansas City, Mo., he became a graduate of the U.S. Military Academy at West Point, and was in the 3d U.S. Cavalry in the Philippines from 1900 to 1902. In 1905 he went to the Canal Zone where he served the Isthmian Canal Commission in various capacities, rising to the important positions of Assistant Quartermaster and Chief Quartermaster, leaving the Isthmus in 1915, following the completion of the Panama Canal and its opening to navigation. His Isthmian labors made him the consummate master of organization and detail which enabled him later to become one of the ablest leaders in the business world.

He entered private business in 1915, but during World War I he served as Acting Quartermaster of the U.S. Army, 1918–19; and then returned to a business career, and was vice president of the great firm of Sears, Roebuck & Co., 1924–28, and then became its president, and thus served for the ensuing 11 years; and as its head helped to build it up and expand it to become the greatest merchandising institution in the world. On his retirement as president in 1939 he became the company's chairman of the board, and so continued until 1954. He yet continues as a company director.

His sturdy Americanism has brought him distinguished civic and patriotic activities and fame. In every task he has undertaken he has achieved success; and his life and his labors are inspirational and altogether worthy of emulation. Yet strong and active, he is devoting the later years to matters of public good.

We welcome him—a fellow Old Timer—as one of us, and as a friend in the construction era of the Canal, and as a friend now and always. He left London yesterday at 11 a.m. and flew by jet plane to New York, arriving there yesterday afternoon, and in Washington yesterday late afternoon.

He needs no introduction to this assemblage. It is with a sense of honor and privilege that I present Gen. Robert E. Wood.

General Wood was cordially greeted by the audience and spoke as follows:

ADDRESS OF GEN. ROBERT E. WOOD

I am happy to be here today with the members of the Panama Canal Society of Washington. The older I grow the more I dislike to make speeches, but this is an exception, as it gives me an opportunity to greet some of the comrades of my younger days.

I went to the isthmus in March 1905, just before the first (and only) yellow fever epidemic broke out. I have always been grateful to the fever, for there was a short period, where anybody who would stay on the job was promoted. I didn't get the fever, and I was promoted very rapidly and reached the upper echelons of the work at its very beginning.

I had the honor of serving under all three chief engineers: Wallace, Stevens, Goethals. Mr. Wallace, though a brilliant engineer, was not long enough in the canal to have much impression on the work. Mr. Stevens was a truly great engineer, great administrator, and great leader of men. He planned and started the execution of the work in the Culebra Cut, for which Col. Goethals gave him full credit. No ordinary man could have filled Stevens shoes, but Goethals, like Stevens, was no ordinary man. Suffice to say that no other man could have completed the job as rapidly and efficiently as the Colonel. It was one Government job that was the epitome of economy and efficiency, but it was Goethals' brilliant mind and dynamic energy that did it.

I felt that all of us, serving as we did as young men, must have felt the pride of working on a great job, and a job in which there was never even a whisper of graft or scandal.

I was first assigned to the then Department of Labor Quarters and Subsistence which had the duty of recruiting the labor, housing it, and feeding it.

The job had many complications as can be imagined. The feeding of the West Indian Negroes, of the Spanish and Italian labor, of the Americans, divided as they were, between the outdoor construction men, railroad and steam shovel workers, and the engineers, draughtsmen and clerical workers, presented many problems.

The first class of employees preferred quantity of food with less stress on the refinements of service and equipment; the second class of employees preferred less quantity and better service. We partially solved the problem by dividing the dining rooms in half, part being assigned to the men who wore coats, part to those in their shirt sleeves, all men making their own choice.

Furniture was assigned to all employees. Some bright genius, the precursor of our modern bureaucrat, devised a devilish system of assignment of furniture. The furniture was assigned in three classes: A—to employees getting from $100 to $200 per month; B—to employees getting from $200 to $300 per month; and C—to employees getting over $300 per month. There was one class for all bachelors. The complications can be imagined.

In 1908 the Department was abolished and the duties divided between the Commissary Department, which handled the feeding and the Commissary stores, and the Quartermaster Department which handled the housing. To the Quartermaster was transferred the Materials and Supply Department—in other words, the supply system of the canal. As the construction work progressed, the supply problem became the major problem. To supply a great work 2,000 miles from a market is a monumental task. I have often told my buyers in Sears that they had a relatively easy stock and supply problem, compared with that of the Panama Canal.

In 1911, I was assigned for a brief period to the operation of the water terminals of the Canal—Colon and Balboa, then returned to the Quartermaster, became Chief Quartermaster of the canal in early 1913, and for my last year from August 1914 to May 1915, had charge of the construction of the permanent buildings of the canal.

All in all I had a varied experience of different phases of the work. I did not then guess that in 1918 I was to become Quartermaster General of the Army, and later the head of a great merchandising business, but the training and experience I gained on the canal was to be invaluable to me in later years.

I served under Col. Goethals for 7 years. He never accepted an excuse for failure. For a young man to serve under such a chief was a wonderful experience. I have never ceased to be grateful to him in later years.

I think most of us remember with nostalgic fondness our life in the canal; most of us were very young. We were starting life together, many of us brought our brides there, had some of our children on the canal, started our families. By the standards of that day, we were well paid and well treated. We were associated with a great enterprise of which all of us felt proud. Altogether it was a rare experience. Those of us who went through the canal on the first boat on August 1, 1914, will never forget the emotions aroused by that first trip.

So much for our earlier experiences. Today a danger menaces our country—a danger connected with our Panama Canal. There is no question that the power of the Soviet Union is being exerted to encircle and absorb in the matter of influence the Panama Canal and the Caribbean nations—a series of proposals has been put forth, all of them tending to undermine the sovereignty of the United States over the Panama Canal. The latest of these proposals are the 12-mile limit extensions, that Panama has undertaken to establish by law. This proposal is in line with Soviet and Red China actions in their contiguous waters, and these actions have been seized on by radical leaders in America as a precedent for Panamanian action in the premises.

We have been fortunate in having ex-Governor Thatcher; and two of the most patriotic Americans in Congress—Representative FLOOD and Representative WALTER, both of Pennsylvania—as well as some engineers and others who have tried to combat the attacks on the jurisdiction of our Government over the Canal Zone. Congressman FLOOD in particular has made a series of splendid speeches covering the whole subject of the attempts to break down our sovereignty over the Canal Zone.

To treat these matters in this after-luncheon speech would take too much time,

but the speeches of Governor Thatcher and Mr. FLOOD, who is an able, fearless, and patriotic American Congressman, fully explain the whole subject far better than I can do. In this connection, I would also mention Capt. Miles P. DuVal (U.S. Navy, retired), a major historian of the Panama Canal, with service on the Canal Zone; he has also, by speeches and writings, made extensive and effective contributions in the same behalf.

While we have our defenders, we also have our opponents. Governor Thatcher sent me a clipping taken from the Washington Post of April 26 of this year. How an editorial writer could write such an editorial without apparently any knowledge of the history of Panama and of the functions of the canal, it is hard to see.

In 1902 Panama was a State or Province of Colombia. It could hardly be called a nation or a nationality. As the editorial states, it is entirely ruled by a small clique of families. There can be no nationalism when there is no nation. When the Americans started construction, the Canal Zone was practically a wilderness and was almost valueless. It is entirely due to the expenditure of some $400 million by the American Government and by the devotion and enterprise of the men who worked in the canal that it was completed and is today a great monument to mankind.

America constructed the Panama Railroad about 1850. We paid Colombia some $25 million as treaty compensation. We have raised the payments, which were originally $250,000 a year, to Panama by successive steps to nearly $2 million a year.

An article on the whole Panama question was recently published in the Saturday Evening Post, its author being Demaree Bess, one of the ablest of all American correspondents. I have a high respect for Mr. Bess. I don't agree with everything in the article; I think Mr. Bess has somewhat underrated the Communist menace, but I do believe that he has pointed a way to the solution of the problem.

Any further claims by the Panamanian Government regarding the canal payments, and above all, any question of the sovereignty of the canal, should be disregarded, and our State Department should inform the Panamanian Government in no uncertain terms that we have a treaty; that we will observe it; and that we shall not amend the treaty further. We should also request them to clean house of Communist agitators.

If Panama needs economic help and assistance, and if we continue our policy of foreign aid, it, as an undeveloped country, should be entitled to a proportionate amount of this economic aid. Personally, I prefer to see a greater proportion of this aid go to Latin America, rather than Europe.

The question of communism in Panama is a very difficult one. If Panama is well governed, if the standards of education go up, if the standard of living rises, communism will retreat and disappear, that is what is happening in Western Europe today.

Now our Panama Canal Society is a small one. Its members now are all elderly men. We must not fool ourselves that we have very much influence, but I do believe it is up to the members and the society, as a whole, to do what we can to register our opposition to communism, to the encroachments on the sovereignty of the canal, and individually to write our Congressmen and Senators expressing our views. I sometimes feel pessimistic when I contrast robust Americanism of the young people of 1905 with some of the pallid and pink internationalism of the young people of 1959. However, I still have faith in my country and our people and I believe we shall continue to advance.

At the conclusion of General Wood's address he was cordially thanked by Toastmaster Thatcher, who called for a rising vote of thanks to the speaker for his presence and his most interesting and inspiring remarks, which was enthusiastically accorded.

The toastmaster called on Hon. WILLIAM K. VAN PELT for a word of greeting, to which the Congressman responded expressing his pleasure at being invited as a guest and participant at the luncheon meeting. He spoke of his visit to the isthmus last fall during observance of the T. R. centennial and of his return by ship with the Thatchers and a contingent of oldtimers from the Washington, D.C. region.

Thereupon Governor Thatcher exhibited moving pictures in color, taken by Mrs. Thatcher and him last November on their visit to the isthmus.

The election of officers of the society for the ensuing year then took place, with the following results: Frank M. Hill, president; Clarence L. Chapin, vice president; and Matthew C. O'Hearn, secretary-treasurer. Also members of the executive committee were chosen for the ensuing year with Joseph A. Cheeseman, chairman.

Mr. Speaker, the Panama Canal Society of Washington, D.C., has, indeed, set a most worthy example to other similar societies, and to patriotic and civic organizations, in general, in dealing in a forthright and effective manner with the grave problems connected with the present and future of the Panama Canal.

Address by Hon. William Jennings Bryan Dorn, of South Carolina, at the Annual Jefferson-Jackson Day Dinner of Eighth Virginia Congressional District Democrats, Charlottesville, Va.

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. TUCK. Mr. Speaker, under leave heretofore granted me to extend my remarks in the Appendix of the RECORD, I am pleased to include an address delivered by our colleague, the Honorable WILLIAM JENNINGS BRYAN DORN, of South Carolina, at the annual Jefferson-Jackson Day dinner of the Eighth Congressional District of Virginia, held at Charlottesville on May 23, 1959. The Eighth District of Virginia is represented in the House of Representatives by the distinguished dean of the Virginia delegation and chairman of the Rules Committee, the Honorable HOWARD WORTH SMITH.

The occasion attracted a very large assemblage of Democrats of the Eighth District. The Honorable Thomas H. Blanton of Caroline County, who is chairman of the Democratic State Central Committee for the State of Virginia, presided.

Congressman DORN is an able and effective speaker. He has cooperated with the Democrats of Virginia on a number of other occasions and rendered a similar service to the Democrats of the Fifth District of Virginia at a meeting held in that district, at Danville, in October 1958.

The able address of Congressman DORN was highly appropriate for the occasion and, in my opinion, will prove of interest to the Members of the Congress as well as to the public in general. The address is as follows:

Senator Blanton, Congressman SMITH, and my fellow Democrats, I am flattered and honored to be presented to you by one of the greatest Americans of our time—your own beloved Judge HOWARD SMITH, Chairman of the powerful Rules Committee of the U.S. House of Representatives. Your Congressman is an American who places the welfare of his country above political expediency. He is rendering to the entire Nation the same unselfish service so typical of the early patriots of your illustrious Virginia history. Judge SMITH is recognized in the House as the leader of those who of us who still believe in States rights, economy in Government, and individual liberty. Were it not for this great American, I shudder to think where our freedom and liberty might be at this very moment. We might well be under a Fascist type of complete national socialism. All of us in the Congress have been inspired by his logic and foresight, his calmness and patriotism. I congratulate you, the Democrats of the eighth district, for your selection of this great man many years ago and your continuing support of him through the years.

May I say thank you for sharing with the entire Nation the devoted service of that stalwart champion of economy and individual liberty, your senior Senator HARRY F. BYRD. Senator BYRD upholds with honor and distinction the traditions, heritages, and philosophy of your great Commonwealth—the Mother of American Presidents. You are rightly proud of your entire delegation to the Congress for their leadership, forthrightness, and allegiance to the faith of our fathers. Under this able leadership, you are carrying on in the tradition of the men who supported George Washington, Thomas Jefferson, and the other Founding Fathers.

Virginia soil is sacred soil to all freedom-loving Americans. You gave to the Nation George Washington, the Father of our Country; James Monroe, and the Monroe Doctrine; George Mason, and his Bill of Rights; James Madison, the Father of the Constitution; Robert E. Lee, the English-speaking people's greatest military genius; Thomas Jefferson, author of the Declaration of Independence, and founder of our great Democratic Party. These great Americans and countless others you have produced contributed immeasurably to the creation of this palladium of liberty.

It is always an inspiration to visit your beautiful, cultured, and historic city of Charlottesville and to see again your charming University of Virginia, your great institution of higher learning which has always imparted to the youth of America some of the patriotism, intellectual sagacity, and love of liberty so characteristic of its founder, "the Sage of Monticello." My wife and I again paid our respects this afternoon to the memory of Thomas Jefferson at that great American shrine we all love. My mind drifted back to the Declaration of Independence when he so ably wrote, "We pledge our lives, our fortunes, and our sacred honor." My friends, we can do no less today if our great Republic is to be preserved as the arsenal of democracy, the heart and core of the free world. We have always been victorious in the war over the forces of oppression, centralization, and totalitarianism. Now, we must fight in peace as we have fought in war to preserve our basic fundamental liberties. It is just as important to save America and preserve our form of gov-

ernment as it was to create America, the Constitution, and the Bill of Rights.

We can and must breathe the new life, vitality, and courage into the Democratic Party. Jefferson, as the founder of the great Democratic Party, was a liberal in that he believed that "the least governed are the best governed." He was a liberal when he said, "There is no danger I apprehend as much as the consolidation of our Government by the noiseless and, therefore, alarming instrumentality of the Supreme Court." He was a liberal when he expressed confidence in the people's ability to govern themselves at the local and State level. Judge Smith is a liberal in that he believes in the time-honored principles and ideals as exemplified by Thomas Jefferson. The rest of us in the South, who have maintained a nucleus around which the Democratic Party could rise again, are liberals. We are the true liberals because we still have, during these trying times, confidence in the individual citizen. We are fighting to preserve for him his liberty and freedom. We want to safeguard his home and family from unwarranted search and seizure. We want to protect him from a Federal gestapo. We wish to preserve for him trial by jury and save for him his time-honored rights to educate his children at the local level. We have never forsaken the principles of the Democratic Party as enunciated by Jefferson. We realize that fundamental principles never change. They are the same "yesterday, today, and forever." We will not now deviate from these principles. We stand today with Thomas Jefferson, William Jennings Bryan, and John W. Davis.

It is the liberal radicals who have left the Democratic Party. It is they who have usurped the title of "liberal." They are really national Socialists, parading in the cloak of liberalism under the banner of the Democratic Party. Their philosophy is close to that of the Fascist and the collectivist in that they advocate centralized Federal authority. They look to Washington for the rectification of any and every evil. They endorse every decision of the Supreme Court. They are conformists, making every effort to brainwash the American people to their conformity. They advocate an increase in the national debt and more domestic and foreign spending. They express no confidence in the people—no confidence in local or State government by their advocacy of Washington paternalism. These radicals have repudiated the time-honored principles and ideals of the Democratic Party, principles that served the Nation and the party so well. These pseudo-liberals desire to regulate the lives of the American people from "the cradle to the grave." Their strength is censorship, special interests, agitation, political bosses and bloc voters. These national Fascists believe that only they should do the thinking and planning for the American people. Their policies have brought America to the brink of ruin. The American citizen is the victim of their unworkable schemes. These radicals now dominate, to a great extent, the policy of both great American political parties. They intend to give the American people no political choice, but they have not reckoned with the American people who are becoming aware of this socialistic plot.

The greatest threat to the American people today is inflation, the prospect of a 10-cent dollar and paper money with little purchasing power; inflation as a result of excessive spending and extravagance in government; inflation spawned by a colossal Federal debt with its stupendous annual interest; exorbitant taxation and foreign spending beyond our means; yes, and from our failure to retire the national debt during a time of unprecedented prosperity. Frankly, I fear cheap money more than I fear the Russian military might. I fear runaway inflation more than I do the Communists' probe into space or their economic war.

The history of inflation is the history of the decline and fall of great civilizations. Imperial Rome and the British Empire faltered on the road of inflation. Following World War I, inflation contributed greatly to the collapse of the German Republic, thus paving the way for the raving Hitler, his national socialism and his infamous secret police. The German housewife in 1923 had to carry a basket of paper money to purchase one loaf of bread. The frugal French people are today in a state of despair and desperation, the victims of insanity in government, the victims of wild government spending and fiscal irresponsibility. French political leaders dished out borrowed government money lavishly to their constituents and promised more and more from the government till. The result—an unbalanced budget, deficit financing and paper money. It takes 37 francs today to buy the same as one franc in 1927. The French housewife is forced to pay the equivalent of $10 for carrots, ham, potatoes, or bread that cost $1 in 1949. The hard-earned savings of the French people in the form of bank accounts, social security, veterans' pensions, unemployment and old-age insurance are all but worthless.

America is on that same road today. We are running through the same red lights. We hear the same warning sirens but, so far, we have failed to listen. The one-worlders, international spenders and radical liberals in both of our political parties would have you to believe that the answer to inflation is more inflation and more paper money. They ridicule the national debt and say "we owe it to ourselves." They accuse the Jeffersonian Democrats of being reactionary. They charge us with slowing the wheels of progress and turning back the clock to horse and buggy days. In a feeble attempt to justify their fallacious spending sprees, they point to our rising national income. They point to our increase in population and they point to the new stars in our flag.

But, oh my friends, their story is misleading. They do not tell you this—they do not compare our increase in the national debt or the increase in our budget to our gain in individual income. Our population has increased only 27 percent in 20 years. Yes, our national income has increased 673 percent in 20 years, but our Federal budget has increased 1,239 percent. The Federal budget in 1938 was $6.15 billion and today it is a staggering total of $82.4 billion. May I remind you also that our national debt of $285 billion is more than the debt of the rest of the world combined. At this fantastic rate of increase, in the near future we will be paying to the Federal Government the greater portion of our income and, unless this trend is halted, your boys and girls here in Virginia will see the collectivist trend become a reality when they will all be working for the Federal Government or paying 80 percent of their income to that Government.

If there is any doubt about the seriousness of this hour, let me paraphrase my distinguished friend, Congressman SMITH, Chairman of the Rules Committee, when he said on the floor of the House this week, "Old Uncle Sam came up with his plug hat in his hand and his stars-and-stripes coattails waving out behind him, and he said to the moneylenders: 'Please renew my note for a year.'

"Did he ask them to do it at 1¼ percent? He asked them to do it at 4 percent, and many of them did not do it; 33⅓ percent of those bondholders refused to renew your Uncle Sam's note at over three times the rate of interest of 1¼ paid last year."

This to me is a shocking state of affairs. It simply means our people are losing faith in the solvency of our country, in the soundness of our paper money. At this very moment no outstanding Government bonds are selling for one hundred cents on the dollar. There is no doubt about it—we are in a crisis, a national crisis brought on by the fallacious policies of the self-styled liberals in both political parties. We, as Democrats, can no longer blame all of these evils on a faltering administration. As a national political party, we can no longer run against that old bogeyman, the 1932 depression. We can no longer, in good conscience, run against Herbert Hoover. We must abandon this negative party policy and launch an offense against the evils of our day.

Let me remind you here tonight, my fellow Democrats, that we control the House and Senate by overwhelming majorities. Yet, we are in a serious depression, one partly of our own creation—a depression of inflation, a depression of cheap money, a depression as serious and more far-reaching than the one of the early 1930's. We must, as a party, cease celebrating our sweeping November victory and examine the future. Already I can see the distant storm clouds of political disaster. Already the rumbling and grumbling can be heard at the grassroots. The gravy train is running off the track. Payday is at hand. We, as a national party, must attack these problems with the spirit and courage of Old Hickory. If William Jennings Bryan could speak to us today he would be saying, "Do not crucify mankind upon a cross of inflation. Do not bear down upon labor a crown of unbearable taxation."

The Democratic Party should offer to the country now and to the Congress a program of tax revision, a sound dollar, a balanced budget, reduction in government spending and government bureaucracy, a tapering off of foreign aid—foreign aid which largely goes into the coffers of special interests. We must offer some incentive through depreciation and a revision of the tax structure so that American business can remain in America and alleviate the unemployment threat. We must abandon this negative foreign policy and launch an imaginative, offensive world policy based upon the Bill of Rights and the self-determination of peoples. The dollar sign must be eliminated as the symbol of our foreign policy. Many foreign policy failures are covered up by censorship and that untouchable—the bipartisan foreign policy.

Billions can be saved in our national defense program. The Democratic Party can offer consolidation of our missile programs, our four Air Forces. We can advocate a uniform supply system and unification of our varied defense activities. We should also explore the possibility of a single service.

We must protect American labor from unfair imports and make our trade program truly reciprocal and mutually advantageous. We have a moral obligation to offer some hope to the youth of America by a start now, however small, toward retiring the national debt. Let me remind you again that the interest on the national debt is the second largest item in our budget and is greater annually than all the expenditures of the Federal Government in the year 1940. It disturbs me greatly to see our national party only offering the American people more spending, deficit financing, and fiscal irresponsibility as a remedy for this monetary crisis. A realistic program should be offered to the American people now and in the 1960 Democratic Party platform. With it we can win. With it we will restore the confidence of the American people in the party of Thomas Jefferson.

The Federal Government holds a powerful club over the head of every American taxpayer. Our people are no longer free. They spend sleepless nights and anxious days worrying about the rapid approach of the tax deadline. No sooner are taxes paid than the housewife, small farmer, and the worker

must begin keeping records, saving pennies, and looking to the next Federal demand on their income with fear and apprehension. The least we can do for the little taxpayer is to simplify tax forms and relieve him of this ceaseless anxiety.

The Government is actually losing revenue through our present tax policy. We have reached the bottom of the barrel. We are already at a point of no return. We are on a dead end street. There is no longer any incentive to expand business. There is no longer the pioneering spirit in business to take a chance and, as a result, unemployment will grow. There is no incentive for big business to expand, and little opportunity for small business to become big business. Our present tax policy, unless revised, will "kill the goose that lays the golden egg." This Congress and the Democratic Party, through a revised tax program, can encourage and bolster our economy and can thus go forward with full employment and with more revenue for the Federal Treasury.

It is past time that the Democratic Party advocate a return to the time-honored principles and ideals of our party—States rights, free local government, individual liberty, trial by jury, and local control of schools. The greatest Democratic platform ever written was the platform of 1932. It was a victorious platform. It was a sound platform. It was patriotic and appealed to the people. I commend to our national leadership a restudy and rereading of that great platform, a platform that called for a 25 percent reduction in Federal expenditures, a balanced budget, economy in Government, States rights, and individual liberty. I remind you tonight, this great platform closed with the philosophy of Thomas Jefferson—"equal rights to all, special privileges to none." Thomas Jefferson and Andrew Jackson launched the Democratic Party as the "Party of the People." They championed the cause of the small farmers, the workers, the underprivileged, and those in remote places on the frontiers of our country. These men had confidence in the people's ability to govern themselves at the local level. They respected the individual, regardless of wealth or aristocratic heritage. These fearless leaders rejected a system of special privileges. The foundation stones of Jeffersonian democracy became a sound currency, a minimum of government, States rights, and only such taxation as absolutely necessary.

If we are to continue to perform our traditional role in America as a political party, we must return to the time-honored principles that made our party stand through the years as the champion of the people and one that served our country so well. We must continue to champion the cause of the average American. Our people are crying for leadership today. We must not disappoint them. Our people are aroused over the complacency and indifference of Washington to their basic problems. They are aroused as never before. They are on the march. A political revolution is brewing. When the aged, poor, and disabled find that hard-earned social security cannot pay the house rent, and old-age insurance cannot meet the grocery bill, when those in the middle income brackets find the purchasing power of their dollar has vanished, then political unrest will be abroad in the land. The American people are going to vote—they are going to protect themselves and their children from a 10 cent dollar. They are not going to accept the platforms of 1952 and 1956, high-sounding platforms forced on the platform committee by the eggheads and pseudo-liberals. May I remind you that these platforms were overwhelmingly rejected by the people at the polls. The rank and file Democrats are not going to permit racketeers and big city bosses to dominate the Los Angeles convention. The people are going to be there. They are going to demand the bread and butter platform of a sound dollar, a reduction in the bloated federal bureaucracy. They are going to demand job security and a fair deal for the American worker. It is going to take more than fancy jokes and five syllable words to unite the Democratic Party.

If we nominate a radical or a self-styled liberal with the same old phony platform, our presidential nominee will again be defeated. The heart and core of the Democratic Party has been the solid South, the land of Jefferson and Jackson. For generations the South almost alone kept alive the time-honored principles and ideals of our party. We did not vote against Cleveland because he was from New York. We did not vote against Bryan because he was from the Middle West. We did not vote against Jim Cox because he was from Ohio, or John W. Davis because he was from New York, or Adlai Stevenson because he was from Illinois. In the South we do not consider sectionalism a qualification for the presidency. We voted for these men because they were great Americans and good Democrats.

On the other hand, the eggheads and liberals discriminate against southern candidates solely on the basis of sectionalism. I quote President Harry S. Truman from volume 2, page 494, of his "Memoirs":

"DICK RUSSELL * * * had the ability, integrity and honesty. He was one of the best informed men in the Senate * * * Senator RUSSELL was always able to present any problem in a clear and straightforward manner * * * I believe that if RUSSELL had been from Indiana or Missouri or Kentucky, he may very well have been the President of the United States."

Let me remind you that in the last two elections, the only electoral support Adlai Stevenson received was in the solid South. The time has come today when the South should be recognized for its loyalty to the party throughout the years. This loyalty rewarded not with a vice presidential candidate who has little in common with the Jeffersonian and Jacksonian theories of Government, but with the presidential nominee.

The time has come for us to ask other sections of the country to cast aside prejudice and nominate as our standard bearer a man from the most democratic section of our country. With the platform of 1932 he could win. Not since 1848, when Zachary Taylor from Louisiana was nominated, has the Democratic Party nominated a man from the "land of Old Hickory" and "the Sage of Monticello." We must rescue the Democratic Party from the radicals, the fascists and from the trend toward collectivism.

The radical liberals and Nazi-type socialists in both national political parties are not only leading us into a socialist pit of no return with their extravagance and waste of Federal funds, but are destroying the power of the States, usurping the rights of our people and concentrating more power in the hands of the Federal Government, particularly the Attorney General. Again these pseudo-liberals are misleading the American people. They are setting up the machinery through which the people they claim to champion could eventually be liquidated or persecuted.

No racial persecution has ever taken place on a nationwide basis except under a powerful central government—autocratic power in the hands of one or a few men. This power is being created in America today. The rights of the States, the local communities and citizens are being taken over by this Federal autocracy. The greatest protection minority races have in America is not the Attorney General, the Supreme Court or Federal secret agents. These are instrumentalities of power that can be turned against minority races. The greatest protection minorities have, in fact their only real protection, is the States of our American Union, sovereign States with their own constitutions. It may be possible to have persecution because of race on the local level, but never on a nationwide basis as long as we maintain the sovereignty of States and free local government.

The same is true of religious persecution and trial by jury. The Spanish Inquisition was made possible by autocratic power in the hands of Philip II. The religious persecutions of Louis XIV and Adolph Hitler were perpetrated through the instrumentality of centralized power. Nikolai Lenin and Joe Stalin were able to destroy the churches of Russia and forbid religious worship only because they wielded absolute power in the Kremlin.

Thomas Jefferson said, in substance, that if there were no States at the time of the formation of the Republic, they must be created to guarantee the freedoms and liberties of our people. This continuous attack upon our States is an attack upon freedom. It is an insidious attempt to undermine individual liberty and create a totalitarian State. It is inconceivable that the American citizen will for long sit complacently and indifferently on the sidelines and watch the gradual liquidation of our Constitution, the destruction of State sovereignty and the usurpation of individual freedom by an all-powerful, ever-growing Federal plutocracy.

Congressman SMITH, your bill, H.R. 3, is a step toward preserving the constitutional power of our States from unwarranted usurpation and encroachment by the Congress and the Supreme Court. It will help preserve this Republic as we have known it. I hope it can become law at this session of Congress. I pledge you my cooperation, my every support and that of my people. We are taking our stand today beside the Founding Fathers of this Republic—George Washington, Thomas Jefferson, Madison, Monroe, and the others. Our struggle today is greater, more far-reaching and even more important than that of these early patriots. If we lose America and the free world today, we will be plunged backward 1,000 years into medieval darkness. The road to chaos and ruin is centralization and consolidation of all government in the hands of a few in Washington. To preserve our basic freedoms, guaranteed in the Bill of Rights, we must save our Constitution as written. This great document can only be preserved and passed on to coming generations by first preserving the integrity and sovereignty of our American States. Freedom of speech, trial by jury; freedom of choice; yes, freedom of the press and religious liberty can only be preserved and guaranteed by defending the rights of our States.

The South must take the lead in this crusade to save America from totalitarianism and from bankruptcy. It can be done through the Democratic Party of Jefferson. Only the South can assume this leadership because we are still free. The people of Virginia and the South can truthfully say with Thomas Jefferson when he said: "I have sworn upon the altar of God eternal hostility against every form of tyranny over the mind of man."

Farmers Are Customers

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Wilkes-Barre Record of Tuesday, May 26, 1959:

FARMERS ARE CUSTOMERS

Farmers and ranchers are among the biggest customers of American industry.

For example: There are 12 million tractors, cars, and trucks on the U.S. farms. Agriculture buys more petroleum than any other industry. Farmers provide a market for 6½ million tons of finished steel annually. Rubber used on the farms of America would put tires on nearly 6 million automobiles annually. Sixteen percent of the gross freight revenue is from agricultural products.

Agriculture consumes 50 million tons of chemicals each year.

Agriculture uses more electric power than Chicago, Detroit, Houston, Baltimore, and Boston combined.

Delinquency of Negro Youths Here Shows Sharp Drop During 1954–58

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post and Times Herald of March 19, 1959:

DELINQUENCY OF NEGRO YOUTHS HERE SHOWS SHARP DROP DURING 1954–58

(By Milton Viorst)

Delinquency among Negro children declined sharply from 1954 to 1958, the Welfare Department reported yesterday.

The rate fell from 37.1 per 1,000 children, to 21.2 during this period. Delinquency among white children, meanwhile, remained stable. In 1954, it was 15.3 per 1,000. In 1958, it was 15.2.

The figures were compiled by Welfare Department statisticians for children 5 to 17 who were referred to the Juvenile Court for serious offenses. Statistics were presented to the Public Welfare Advisory Council yesterday.

The nonwhite delinquency ratio declined steadily over the 5-year period, the figures showed. In 1955 it was 32.6, in 1956 it was 27.5, in 1957 it was 22.4. The figures for white children fluctuated only slightly from year to year.

The figures showed that Negro population in the 5 to 17 age group grew from 69,000 to 93,500 during the period. Meanwhile, the number of delinquents dropped from 2,562 to 1,980.

The white population in the juvenile bracket dropped from 62,000 to 52,000. The number of delinquents fell correspondingly from 946 to 792.

The results were reflected in the general decline of juvenile delinquency in Washington, reported recently in the "State of the Nation's Capital" message to Congress. Total delinquency fell from 26.8 to 19.1 per 1,000 from 1954 to 1958.

District Welfare Director Gerard Shea attributed the progress to the work of the Youth Council, area boards, the youth division of the Police Department, and the increased length of commitment of juvenile offenders.

He told the council that the average delinquent now remains under supervision about 3 years, of which 12 to 18 months are in training schools. He said lengthened supervision and an enlarged staff have cut the number of repeaters.

In other action, the council recommended that schools in welfare institutions remain under the control of the Welfare Department. The Federal Bar Association recently urged their transfer to the Board of Education.

Overpopulation in the Ryukyu Islands

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. BURNS of Hawaii. Mr. Speaker, the United States, under the Treaty of Peace with Japan, is responsible for the administrative, legislative, and jurisdictional control of the Ryukyu Islands, of which Okinawa is the biggest. As Mr. Sulzberger of the New York Times says in his recent book, "What's Wrong With U.S. Foreign Policy?" since the Security Treaty with Japan does not guarantee Japan's support in any future Pacific war, our generals and admirals calculate that we cannot relinquish Okinawa, a quintessentially important base. Since this retention of the Ryukyu Islands may continue for many years, the United States has certain specific responsibilities for the islands and has inherited certain problems which we must solve. One of them is overpopulation.

The population land resources ratio of the Ryukyu Islands is the most unfavorable of any area in the world. With a present population of 830,000 and growing at the rate of 20,000 per year, these "wards" of the United States find themselves crowded into an area of 850 square miles, only 25 percent of which is arable. Okinawa, the big island, contains some 600,000 people in addition to the vast military base to which Mr. Sulzberger refers. Okinawa had a population density in 1951 of 1,208 to the square mile, as compared with 580 in Japan. Using another comparison in 1951, the Ryukyus had a population of 6.36 per cultivated acre, as against 5.67 in Japan and 0.385 in the U.S.A. This population density is no doubt the biggest in the world, and while the official statistics are 8 years old, they have certainly not improved to any extent.

The use of some 40,000 acres on the big island of Okinawa by the U.S. Armed Forces further complicates the problem, which was further compounded after the war by the forced repatriation of approximately 190,000 Ryukyuans from Japan, Korea, Formosa, and the Pacific Islands. This decision by the Allied Powers has been proven unwise, but it does not help solve the present problem. Prior to the war, population stabilization was accomplished in the islands by an ambitious overseas emigration program sponsored by the Japanese Government. By 1938, about 74,000 Ryukyuans had emigrated to countries outside the Japanese Empire, in addition to those resettled within the Empire and forced to return home following the war's end. Of the some 74,000 emigrants, about 30,000 went to South America and have become welcome additions to the population in Argentina, Brazil, and Bolivia. Many have become extensive landowners while others entered business and the professions. They have intermarried and become well integrated into the community. Since the end of the war, an additional 8,170 had emigrated to South America by July 1, 1958, and about 250 additional emigrants went to the Okinawa colony in Bolivia since that time.

While resettlement to other less populous islands in the Ryukyus has had some success, the basic problem confronting the United States is to stabilize the population by various methods, including emigration to other areas. Areas considered have been, of course, South America, the Pacific Islands, New Guinea, and the United States. South America will be treated later, but suffice to say that emigration to the Pacific Islands is not feasible because the islands under U.S. administration are gradually developing an overpopulation problem of their own. The proposal for emigration to New Guinea was not acceptable to the Government of the Ryukyus Islands.

Insofar as emigration to the United States is concerned, it is perhaps surprising to know that Ryukyuans have no quota for entry into the United States, and must technically apply under the Japanese quota, which is always oversubscribed. No other area outside the Iron Curtain appears to be discriminated against in such a fashion. However, it is interesting to know that the State Department has recently issued instructions that effective from May 15, 1959, Ryukyuan applicants for emigration to the United States will be removed from the Japanese list and listed under the separate quota list for the Asian Pacific Triangle. This quota appears to offer some hope for a living adult Ryukyuan emigrating to the United States legally as a Ryukyuan.

The Okinawan colony in Bolivia was established in 1954, and now numbers in excess of 1,200 people. Following some initial reverses, caused by a poor location for the first site, a strange disease which still eludes identification, and land titles, these have been solved by moving the colony to a new and more favorable site where the strange disease has not appeared, and the official transfer of land titles by the Government of Bolivia in January of 1957. An additional area of some 49,000 acres is reported to be available for the expansion of the colony. The colony had a successful rice crop last year and sold 1,500 tons of rice on the market. An additional 244 emigrants are presently on the high seas en route to join the colony and to settle in the new grant of land. Of the 8,170 emigrants since the war's end, over 5,000 emigrated on their own resources, about 1,600 were aided by the Government of Japan, and 1,200 borrowed from the Ryukyuan Emigration Bank. GARIOA funds provided $160,000 for the transportation of the first group of 394 emigrants in 1954, and about $180,000 in Bolivian counterpart funds were used at the colony site for clearing the jungle, building roads, purchasing farm equipment and seeds, and other basic expenses.

The Ryukyuans who have emigrated to Hawaii now number a vigorous prosperous group which always appears as a challenge to Ryukyuans passing through Hawaii, exemplifying to the visitor from the native land the freedom and benefits that accrue to American citizens, of whatever nationality they may be. The Americans of Okinawan ancestry in Hawaii are a distinct and valuable addition to our citizenry, and I am proud of every one of them.

My colleague, the gentleman from Minnesota, WALTER JUDD, added a clause to the Mutual Security Act of 1954 providing that from funds available under the act, not to exceed $800,000 could be used to facilitate the migration to the other American Republic of persons resident in that portion of the Ryukyu Island Archipelago under United States control. Of this continuing authority, only $180,000 has been made available, and that was for the initial colony in Bolivia. The relocation of the original colony, the strange disease, and other internal problems prevented any further use of the funds under this authority until 1958 when the Department of the Army, acting as executive agency for the Ryukyu Islands, developed a plan for a further expansion of the emigration program to Bolivia, as well as adult agricultural emigrants to Brazil. Additional information is being sought in Bolivia to support this plan because that country offers the best opportunity for emigration of families and will afford assistance to Bolivia in its campaign to become more self-sufficient in providing the food it requires.

The prewar population problems of the Ryukyus were solved by emigration, and Japanese propaganda made much of the domestic need for living space. The population has been thoroughly indoctrinated with the idea that emigration was both a necessity and a right. Ironically, this Japanese policy may have been one of the contributing causes of the late war in the Pacific. While the policy has been discredited, the psychological residue remains and generates strong pressures for emigration. Unless minimum outlets for these pressures can be found, they could build up to an explosion point. With both Japan and the government of the Ryukyu Islands supporting migration, any serious inadequacies in the program will be attributed to the lack of U.S. support.

A comparison of emigration programs in overpopulated areas, which have been supported wholly or in part by U.S. funds, indicates quite clearly that the per capita cost for emigrants from the Ryukyus to South America compares most favorably with more expensive programs. The Ryukyuan government and the individual emigree are contributing almost 45 percent of the total cost from their own resources. Those programs, which took almost 7,000 Ryukyuans to South America, other than Bolivia, since the end of the war, have been financed almost entirely from local sources. Funds to the extent required are no longer available from local resources, and the operation must be partially supported by the United States if the overpopulation problem in the Ryukyu Islands is to be ameliorated.

It is my hope that the $620,000 for which authority exists in the Mutual Security Act will be promptly found and made available to the program, and I would hope that succeeding amendments to the Mutual Security Act would continue this support.

Big Ed Walsh, One of Baseball's Greatest Pitchers and Native of Plains, Pa., Near Wilkes-Barre, Dies at Age of 78

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I includes the following article from the New York Times of Wednesday, May 27, 1959, which reports the passing of Ed Walsh, truly one of baseball's alltime greats who starred for many years with the Chicago White Sox. Mr. Walsh was born in my congressional district and began his fabulous baseball career in Wilkes-Barre. Luzerne County was always justly proud of big Ed Walsh who performed feats in the national pastime that still stand as records in the game.

ED WALSH, PITCHER, DEAD AT 78; STAR OF WHITE SOX FOR 12 YEARS—MEMBER OF "HITLESS WONDERS" OF 1906 WON 40 GAMES ONE SEASON—IN HALL OF FAME

POMPANO BEACH, FLA., May 26.—Ed Walsh, one of baseball's greatest pitchers, who one season won 40 games for the Chicago White Sox, died today of cancer. He was 78 years old.

Since he came to Florida in retirement 3 years ago, Mr. Walsh has been in and out of hospitals. Until his death he opposed the ban of spitball pitching that was enacted after he left the scene. The spitter was his best pitch when he was in his prime in the early 1900's.

Surviving is a son, Robert E., of Meriden, Conn., where his father worked for many years at a water plant after he retired. Before he moved to Florida, Mr. Walsh lived in Cheshire, Conn., near Meriden. Another son, Ed Jr., who died in 1937, also pitched for the White Sox.

HALL OF FAME MEMBER

A coal miner in his youth, Edward Augustin Walsh went on to become one of the greatest spitball pitchers in the game and to win election to baseball's Hall of Fame in 1946. In his prime the big right-hander was also noted for his control and blazing speed.

Big Ed's feats were many, most of them coming in 1908, when he won 40 games and lost 15. He was an iron man that year, appearing in 66 games and setting a record for innings pitched—464, a mark that still stands.

During that season, when the White Sox finished third, only 9 percentage points out of first place, Walsh pitched seven times in the last nine games. In that stretch he won four times and lost once, 1–0, when Addie Joss of the Cleveland Indians pitched a perfect game against him. Among his four victories were complete games in a doubleheader on September 29, when he beat the Boston Red Sox, 5–1 and 1–0.

Walsh won a doubleheader on another occasion and in 1911 pitched a no-hit game against Boston.

He was born in Plains, Pa., on May 14, 1881. At the age of 20 he received a tryout with the Wilkes-Barre club of the Pennsylvania State League and was a sensation. Walkes-Barre refused to part with him, and he remaind there until the circuit disbanded because the coal miners, who constituted a major portion of its patrons, went on strike.

In 1902, Walsh was sold to the Meriden Club of the Connecticut League; 2 years later he went to Newark, then shortly thereafter joined the White Sox. He remained in Chicago through the 1910 season and ended his career the next year with the Boston Braves of the National League. In all, he won 195 games and lost 128.

STAR OF HITLESS WONDERS

During his heyday with Chicago, Big Ed was the big attraction on the team known as the hitless wonders. His teammates on the pitching staff were Doc White and Nick Altrock, left-handers, and Frank Owen and Frank Smith, right-handers.

This group pitched the White Sox to the American League pennant in 1906 and helped to defeat the Chicago Cubs in the world series in six games.

In the third game of the 1906 series, Walsh blanked the Cubs 3 to 0 and struck out 12 batters. This performance stood as the strikeout record for a world series game until 1929, when Howard Ehmke of the Philadelphia Athletics struck out 13 Cubs. Big Ed also defeated the Cubs, 8 to 6, in the fifth game of the 1906 series, although White had to be called to his rescue in the 7th inning.

By 1907 Walsh had become the ace of the staff. For the next 5 years he was one of the topnotch pitchers in the league. But his arm began to weaken in 1913. He spent part of the next three seasons with the White Sox as a pitcher and talent scout. Then in 1917 he tried a comeback with the Boston Braves. He appeared in four games, won none and lost one.

Walsh became manager of the Bridgeport club in the Eastern League in 1919 and served through the next season. He umpired for the American League in 1921. Shortly thereafter he returned to scouting for the White Sox and also served as a pitching coach at the University of Notre Dame.

Armenian Independence Day

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. MULTER. Mr. Speaker, Armenian independence was brought about by the Russian Revolution of 1917, and ironically, its disappearance was also caused by forces which gave rise to that revolution.

In the midst of the First World War Armenians faced total extermination in the Ottoman Empire, but Armenians under Czarist Russia's domination were spared such a sad fate. In 1917 when the Russian autocracy was overthrown, various nationality groups there felt free, and each seemed to be the master of its own destiny. It was then that the Armenian people asserted their freedom and proclaimed their independence on May 28, 1918.

Unfortunately the Armenian Republic thus established 41 years ago could not survive by itself under unstable and precarious conditions. Two years after

its birth it was attacked by the Turks and by the Red Army of Communist Russia. By early December of 1920 the country was overrun, its government overthrown and a puppet Soviet type of regime was set up under dictation from Moscow. Of course since then the country has been part of the Soviet Union, but the remembrance of the independence attained 41 years ago and lost 2 years later, still lingers on, and all Armenians celebrate the anniversary of that memorable day, the Armenian Independence Day.

We join them in the hope that their liberty may soon be restored.

The Delaware River Port Authority Reports That Waterborne Commerce and Affiliated Activities Produce a Combined Revenue in Excess of $5 Million a Day

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. McDOWELL. Mr. Speaker, Mr. Harry G. Schad, the chairman of the mayors' committee on port promotion, composed of the mayors of Camden, Philadelphia, and Wilmington, reports in a recent letter that within the last 10 years, port commerce of these cities and surrounding areas has nearly doubled and is now in excess of 100 million tons annually.

Mr. Schad points out that—

Waterborne commerce is valuable commerce for the entire business community. A carefully documented analysis, prepared by the Delaware River Port Authority, reveals that waterborne commerce and affiliated activities produce a combined direct and indirect revenue in excess of $5 million per day.

When the present program of deepening the Delaware River is finally completed the entire Delaware River Valley will benefit from a large expansion in the dollar volume of waterborne commerce.

I include here an editorial from the Wilmington Morning News, Wilmington, Del., of May 18, 1959, commenting on Mr. Schad's letter:

FIVE MILLION DOLLARS A DAY

We have before us a copy of a letter sent this month to banks, commercial firms, and merchants by Harry G. Schad. In this case the indefatigable and multipurpose Mr. Schad is acting in his capacity as chairman of the mayors' committee on port promotion.

(It's composed, we note, of the mayors of Camden, Philadelphia, and Wilmington in that alphabetical order.)

Says Mr. Schad:

"Waterborne commerce is valuable commerce for the entire business community. A carefully documented analysis, prepared by the Delaware River Port Authority, reveals that waterborne commerce and affiliated activities produce a combined direct and indirect revenue in excess of $5 million per day.

"Thus in the Philadelphia port area we have a built-in economic asset which generates an amazing amount of dollar activity. * * * And each additional ton of general cargo moving through the port generates another direct and indirect expenditure of some $40."

Mr. Schad adds that within the last 10 years, port commerce of the areas "has nearly doubled and is now in excess of 100 million tons annually." What if most of this increase is in oil and oil products and iron ore. Wilmington is already favored for handling several kinds of imports, and if you ever look at the river traffic you'll notice that by no means all the big ships are tankers or bulk carriers. Ships with the maze of booms denoting general-cargo freighters are visible too, often.

More of 'em can be induced, we're sure, to use the Delaware River port facilities instead of New York and Baltimore. At least that's what hard-driving men like Harry Schad are determined to get them to do.

Cancer Research

EXTENSION OF REMARKS
OF
HON. HARLEY O. STAGGERS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. STAGGERS. Mr. Speaker, it is needless to point out how much our individual lives are affected by the current events of our Nation and the world.

In view of the tragedy which has occurred just this week in the death of our great Secretary of State, John Foster Dulles, I would again like to call attention to the desperate need for the passage of legislation which would provide for a program for the study of that dreaded disease—cancer.

I have introduced H.R. 4139 which would authorize and request the President of the United States to undertake to mobilize an adequate number of the world's outstanding experts to coordinate and utilize their services in a supreme endeavor to discover means of curing and preventing cancer.

Looking around us today, I feel sure each of us is familiar with the heartache and sadness caused by the fact that a member of our immediate family or a friend is presently suffering from cancer, or has been the fatal victim of the horrible disease.

Various individuals and organizations are putting forth an allout effort to assist in alleviating the suffering and prevention of cancer. They are doing a fine job—but I believe the time has come when we must combine national and world forces in combating and conquering this terrible disease which is so destructive to health and happiness and snuffs out life itself.

Even if we were to expend only one-thousandth of the amount for this cancer research program that we spend on our national defense, cold wars or otherwise, it would be a great boon to civilization, and provide the very life to millions of human beings in the United States and the world.

The time for action is now. Cancer does not wait until tomorrow or next week or next year—it strikes young and old alike, men and women, regardless of race or creed, the rich and the poor. Cancer has no mercy. Let us take the necessary measures for action now toward the complete destruction of this mighty foe.

Monsignor Mahon's Diamond Jubilee

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 6, 1959

Mr. BECKER. Mr. Speaker, I insert herewith an editorial written in the great Diocesan newspaper, the Brooklyn Tablet. This editorial deals with the life and accomplishments of a priest whom I have known for a great many years, the Right Reverend Monsignor John J. Mahon.

I could add nothing further to this editorial except to say that the people of my district, from one end to the other, know that Monsignor Mahon has been not only a priest of the Catholic Church for 60 years, but a man who devoted a greater part of his life in helping all the people of the communities in which he was either a curate, assistant pastor or pastor. The life he has led in the community has caused him to be known as one of the best loved men of the Catholic Church.

The editorial follows:

The diocese of Rockville Centre and the diocese of Brooklyn rejoice as one on the occasion of Right Rev. Msgr. John J. Mahon's diamond jubilee in the holy priesthood. We join our prayers as he offers a solemn mass of thanksgiving Wednesday, May 27, the 60th anniversary of his ordination, in Our Holy Redeemer Church, Freeport, with Bishop Walter P. Kellenberg presiding. Forty-nine of his 60 years of fruitful priestly labors have been spent in Nassau and Suffolk Counties, and 24 of them as pastor of Our Holy Redeemer Church.

Few priests are blessed with the opportunity to serve God for so many years, and fewer jubilarians are to be found who can perform the arduous duties of the priest as Monsignor Mahon does every day. He has been through these many years and remains today, by the grace of God, a dedicated man. By his devotion to the care of souls he has earned the admiration and the abiding affection of his people. By his keen interest in public affairs he has merited the respect and gratitude of our public officials.

Surely our hearts are thrilled when we contemplate the innumerable graces conferred through his hands for the salvation of his fellow man. It has been in many instances a labor, trying and difficult, but always crowned with success.

People of all faiths have respected him and conscientiously obeyed his admonitions, seeing always in his kindly interest the intent to promote their eternal welfare.

Monsignor Mahon's 60 years of devotion to duty, but above all his sacred office itself, have made him venerable. He has brought distinction and added dignity to the priesthood. His has been a noble and useful career. He has been not only a witness, but

has made a vital contribution to the magnificent growth of the church on Long Island, from his early days in Sag Harbor to the present.

As a young pastor in Inwood, Long Island, he met the many burdensome duties of his charge with a singular fortitude. Here everything was to be raised, as it were, from its foundation; the organization of his people into a strong flock; the erection of a church and rectory; the assurance of means for the religious education of youth, that precious portion of pastoral solicitude. All of these achievements marked his apostolic work in this area as well as in Baldwin, where he built a beautiful rectory, and in Freeport, where he erected an eight-classroom addition to the parish school and made many extensive improvements on parish property.

Surely he has been all things to all men, but only that he might win all men to Christ.

The Tablet, in saluting Monsignor Mahon on his 60th anniversary, is particularly grateful to him for his consistent and loyal support of the Catholic Press. Ever since this paper started he has been one of its finest patrons, always promoting its circulation and willing to cooperate in providing reading material. It is due to such encouraging and helpful support as he has so generously provided that the Tablet has met with success.

The church is alive today because of the sacrificing zeal of her children through the ages—priests, religious and laity; and the stellar role played by this humble priest from this corner of God's vineyard is already written in the Book of Life. Ad multos annos.

Justin C. Morgan

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. DULSKI. Mr. Speaker, this week the city of Buffalo mourns the passing of one of its most outstanding jurists, Judge Justin Colfax Morgan. He was an indefatigable worker and a conscientious public servant. Before his appointment to the bench, Judge Morgan served Buffalo as an assemblyman in the New York State Legislature where he worked just as diligently.

I know that the sympathy of all of us is extended to his wife and family in their great loss.

I wish to include the following editorial which appeared in the Buffalo Evening News, Buffalo, N.Y., on May 26, 1959:

JUSTIN C. MORGAN

Western New York has lost a fine public servant in the death of Justin C. Morgan. His career in public life spanned 31 of his 58 years and comprised service at all three levels of government, culminating in his appointment in 1956 as a Federal judge. To all his posts he brought the same characteristic combination of great ability, deep dedication and uncommon strength of character.

His 16 years in the legislature were a model of diligence and integrity in the public interest. A top-ranking member of the Republican majority, he was regarded with warmth and affection by political friend and foe alike as both a lawmaker and a man. Serving in key committee posts, he left a constructive imprint upon countless legislative advances, particularly in governmental ethics, housing and the judiciary.

As a judge he showed the same skill that had marked his years at Albany. All who observed his work were impressed by his unusual capacity for hard work, his ability to get quickly to the heart of issues and his abiding sense of public responsibility. He made of his courtroom a symbol of dignity and decorum in the best traditions of the Federal bench.

Judge Morgan's public conduct flowed naturally from the wealth of his personal traits. Gentle in manner, unfailingly good humored, devoted in his friendships, he displayed a genuine love and respect for his fellow men. His untimely death will properly be mourned as a grievous loss on many counts—to the Federal judiciary, to the cause of public service generally and, not least, to the community in which he lived and worked.

Civil Airlift and MATS

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. PORTER. Mr. Speaker, under a previous consent I insert hereafter an excellent article from the Taxpayer of May 1959, published by the Citizens Public Expenditure Survey, entitled "Costly MATS Flights Slug Taxpayers Twice."

Following that article, Mr. Speaker, I am inserting an article by Edgar Prinn in the Washington Evening Star of May 27, 1959, quoting General Tunner, the Commanding General of MATS. The views expressed by him, if carried out by the Defense Department, would be a refreshing change of attitude on the part of the Department of Defense and would lead to opportunities to build up civil airlift.

The articles follow:

[From the New York State Taxpayer, May 1959]

COSTLY MATS FLIGHTS SLUG TAXPAYERS TWICE

(By Ralph C. Morgan)

Every day at 10 a.m. (Pacific coast time) an Alaska Airlines DC–6 takes off from the State of Washington and flies to Fairbanks and Anchorage, Alaska. At exactly the same time a Military Air Transport Service (MATS) equivalent of a DC–6 leaves the State of Washington for its daily flight to Alaska.

Taxpayers are subsidizing the Alaska Airlines run because it is not producing enough revenue to pay its own way. Taxpayers, of course, pay the full cost of the MATS flights. And these MATS flights, carrying both military and civilian personnel, result in a revenue loss of nearly $3 million to the private airlines servicing the area and which are equipped and capable of handling the military traffic. The Greater Anchorage Chamber of Commerce notes that this loss of revenues would offset current subsidies paid these airlines.

TAXPAYERS CHARGED DOUBLE

"Here," says Congressman DANIEL FLOOD, of Pennsylvania, "is a clear case of the taxpayers being charged twice * * * Why can't we eliminate that double charging of the taxpayers by putting the MATS traffic on that commercial plane?"

One Air Force officer, Brig. Gen. Robert J. Friedman, has declared before a congressional committee that "MATS operation into the Alaskan area is no different from their transport operation throughout the globe."

"Consequently," notes Congressman CHARLES O. PORTER, of Oregon, "outside of the continental United States, government-owned and government-operated airlines, in the form of MATS and an equally large fleet of administrative aircraft fly parallel to the U.S.-flag airlines, and compete daily with them in the carriage of peacetime government traffic." The cost of MATS operations this year tops one-quarter of a billion dollars.

TOUGH COMPETITION

No wonder commercial airlines are asking Congress for subsidies of more than $7 million. It's tough competing with an airline that doesn't have to charge users enough to meet its own expenss, let alone show a profit.

Each year Congress has been telling the Defense Department that it "should to the greatest extent practicable, adjust its use of air transportation so as to use existing unutilized capacity of U.S. air carriers" * * * an order which, for the most part, has been generally ignored.

In fiscal 1955 MATS procurement of commercial aircraft amounted to only $14.1 million. Last year Congress really put the pressure on and the Air Force finally agreed to procure $84 million of civil aircraft during the current fiscal year. In the final appropriation action MATS was given $80 million to be used this year for commercial air transportation service only.

"EVASION, SUBTERFUGE"

But, in March, MATS admitted that it would only use $66.7 million for civil airlift procurement this year. "This," said Congressman FLOOD, "is a classical and traditional example of the attitude of the Air Force vis-a-vis MATS and the intent of Congress from the very inception of this problem, and they will continue to do so with or without reason at every possible moment. My opinion is that there has been evasion, subterfuge, and a determined spirit of resistance against what we meant."

It has been repeatedly demonstrated that civilian airlines can carry goods and passengers more efficiently and at less cost to the taxpayers than can MATS. For example, it was found that one commercial line could offer United States to Japan air service for military personnel at a cost of $184 per passenger. The MATS cost for the same service was $212 per passenger.

However, this year the Defense Department is proposing to make a one-third cut in the use of civil airlift and is seeking a sizable increase in funds to further expand MATS operations by 44,000 flying hours.

The Defense Department wants to cut civil airlift next year down to $54 million, less than 19 percent of the total amount spent for Government air traffic. MATS also wants to increase the amount spent on itself by $14 million over this year.

WHY JET TRANSPORTS?

On top of that, the military airline is anxious to get into the jet transport field. It is asking for $53 million to buy some jet transports despite the fact that the commercial airlines have invested some $3 billion in jet planes which could be utilized by the military.

Congressman PORTER told a House Defense Appropriations Subcommittee this month that "if the amounts devoted to civil airlift are up one year and down the next, we cannot realistically hope that civil airlift will consistently grow to a size sufficient to help meet national emergency needs in the event of all-out war, limited war or other emergency."

"MORE THAN ENOUGH"

The Oregon lawmaker has just taken a survey of all U.S. civil airlines (small,

medium and large) and found that these airlines expect to have over 1.2 billion ton-miles of capacity during fiscal 1960 available to carry military traffic. "This is more than enough airlift to carry all the passengers and cargo now transported by the Military Air Transport Service."

Chances are that MATS won't get congressional approval to expand its own operations and cut down on its use of taxpaying commercial airlines this year. But, judging from recent history, the mere lack of congressional approval won't stop this costly Government airlines from doing just as it pleases.

[From the Washington Evening Star, May 27, 1959]

TUNNER URGES MORE AIR USE BY PENTAGON

(By L. Edgar Prina)

The commanding general of the Military Air Transport Service says the Pentagon could save money and give more business to commercial carriers if it moved more men and material overseas by plane.

Lt. Gen. William H. Tunner, in reply to inquiries arising out of charges of Government competition with air transport companies, asserted last night:

"MATS would like to give more business to the airlines but at present there is no more business. The answer, as I see it, is to move more and more defense business overseas by air."

The general noted that 93 percent of Air Force personnel and their families going to and from overseas assignments rode by either military or commercial air, enabling the Air Force to save "substantial" sums of money.

"If the Defense Department as a whole were to adopt this policy, it would increase our movement of Government passengers by almost 50 percent," he contended. "It would result, of course, in increased commercial business."

General Tunner also pointed to the increased use of air delivery for highly complicated and very expensive items of military hardware as a way to save money. For example, he said, the Air Force found it could effect "a 22 percent reduction in an original engine procurement program" after it decided to move its replacement jet aircraft engines by plane.

"In this field of moving higher cost items, much more can be done and I estimate we could double the Defense Department's air movement of these items and save substantial procurement money by buying a fewer number and seeing to it that these high-cost items did not sit on docks and decks on long, tortuous pipelines," he said.

In the current year, MATS has contracted business amounting to $70 million to civilian air carriers and the Defense Department overall will purchase $200 million in airlift from commercial carriers during this fiscal year. The $70 million figure represents an increase of $13 million over the 1958 total.

General Tunner remarked that as MATS contracts have increased, more airlines organize "and spring up to ask for a share of this business." He added that in the last 8 months 17 new airlines have been added to the MATS bidder list.

Obscene Mail Matter

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. WOLF. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD my testimony before the Post Office Subcommittee on Postal Operations, as follows:

TESTIMONY OF CONGRESSMAN LEONARD G. WOLF, DEMOCRAT OF IOWA, BEFORE THE POST OFFICE SUBCOMMITTEE ON POSTAL OPERATIONS, MAY 26, 1959

Thank you for this opportunity of appearing before you. My statement will be a short one, but I hope that it will aid this committee in considering in the proper context the problem of obscenity.

As you all are well aware, the modes, fashions and even the modes of all society differ from place to place and from historical period to historical period. The levels of sophistication vary across the country as to matters concerning sex, religion and, I suppose, even politics. Differences are, of course, even more striking timewise in the United States for we pass through stages and levels of considering certain ideas or objects as unacceptable or even obscene. Because of these obstacles it is indeed difficult to decide on the meaning of obscenity in a way which will be operationally applicable in all cases across the entire country for all periods. Consequently, we are forced to return to certain basic principles and interpret our present problem in the light of these principles. In the United States we are most fearful of trodding on the toes of the individual. Consequently, we fear intervention or restriction on freedom of the press or freedom of belief. For this reason many good and great citizens fear censorship over any part of the printed word in their belief that once censorship begins it is hard to stop and can result in controls and restrictions that would be antithetical to our way of life. Furthermore, drawing on the prohibition experience repressive censorship requirements will result in an even greater rash of obscene and pornographic literature.

However, there is another side of the story which I believe should be emphasized today. Philosophers have pointed out in the past that certain kinds of literature must not be allowed in the society because of its deleterious and corrupting effect. These philosophers have felt that because of the very nature of man certain kinds of literature lend excitement and stimulation to the baser and more brutish side of man's instincts.

Today this hypothesis has been shown in case after case where perverted and violent acts are performed by both our youth and adults because of stimulation and deviation gained in part from reading smut magazines. As I am sure the subcommittee is well aware, many of these magazines mingle sex and violence together in a way which construes sex with violence rather than with love. Sadism and masochism become the frame of reference in which life is considered by these people. There is no doubt that this leads to decay in the society.

We have not been without weapons against the forces of evil. On both a governmental and local level, great efforts have been made to combat the insidious influences of pornographic literature. Last year the Congress passed a law which substantially strengthened the hand of the Department of Justice in their battle against obscenity. As a result of that law, which I am told is quite effective, the Attorney General may bring an action in places where the material is both sent and received. Besides governmental action, local authorities are waging strong campaigns in conjunction with church groups, and educational authorities. These groups have helped the parents of this Nation in their efforts to improve the reading habits of their children and to protect their children from participating in crime and depravity. It behooves the Congress to aid the parents who, of course, have the primary responsibility for the moral upbringing of their children. The Federal Government, and more particularly, the Post Office Department, also has a strong responsibility in this matter. It must root out the purveyors of filth through quick and effective means without violating constitutional or reasonable guarantees to the defendant.

I strongly believe that Congress should give the Post Office Department the kind of necessary legal machinery consistent with the Constitution and the Bill of Rights to control the pornographers and smut peddlers.

This task is indeed a complex one, but it is one which must be dealt with now if we are going to be able to control a stream of pornography that, I believe, has done much to fan the flames of juvenile delinquency and adult crime in this country.

Housing—New Bill Needed

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. McDONOUGH. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Christian Science Monitor of May 23, 1959, entitled "Housing—New Bill Needed."

The article follows:

HOUSING—NEW BILL NEEDED

Out of a major trial of strength between President Eisenhower and his liberal Democratic opposition it now appears possible that the Nation may get a better housing bill than either side originally proposed.

We hope this is the course events will take. But we do so with more than a vague notion that compromise is a good thing. We had specific objections to the bill which the President backed and which was so roundly defeated. And we have specific objections to the catchall Rains and Sparkman bills, which passed handily in Congress, only to face a Presidential veto.

Generalized, our objections are these: 1. The legislation backed by the administration cut the urban renewal program back too far. 2. The House and Senate measures backed by liberal Democrats set the spending level for public housing too high.

As the situation now stands, it does not appear that the Democrats can muster the strength to override the expected Presidential veto of their housing bill. In all likelihood, this will give Mr. Eisenhower still another veto victory; the Democrats a 1960 campaign issue; and the average taxpayer a chance for a better measure hammered out as a necessary compromise between the two sides.

This paper firmly believes that such a compromise can be constructed so as to place greater emphasis on encouraging local initiative for needed growth and renewal, rather than simply pouring Federal funds into urban America to prime economic expansion through political public works spending.

We are convinced that the urban renewal program meets this test of encouraging the most useful type of economic growth and rebirth. It stimulates local self-help, civic enthusiasm, careful work from local planners, and the cooperation of businessmen and politicians. It also provides a powerful stimulus to local private enterprise. And, in restoring city land values it makes a return to the Nation's major Fed-

eral-taxpayer, the city dweller, by cutting his local taxes.

In their other features, however, the Rains and Sparkman bills do not always measure up to this standard for Federal spending. This is particularly so of the Rains bill's authorization for 140,000 new public housing units, which would cost about $3.7 billion.

Admittedly a certain amount of low-cost housing is necessary to provide for some of the thousands of persons displaced by urban renewal slum clearance. But not the amount stipulated by this bill. Basically, public housing has the opposite effect from urban renewal—in providing tax-free housing it cuts away the economic base of cities. To build the amount of Federal housing envisioned in the Rains bill is objectionable not only because it is heavy spending, but because it implies that even with economic prosperity, more liberal Federal mortgage policy, and more emphasis on restoration of low-cost housing in renewal projects there is going to be a vastly increasing number of Americans unable to afford anything else.

Housing and slum clearance are a half-trillion-dollar challenge to the most prosperous civilization the world has yet known. But that challenge cannot be met simply by pouring such an enormous sum into the cities in measures which ultimately will hurt local economic bases. We hope a compromise will be found this year that will put housing and renewal back to serving local needs rather than priming the national pump.

Prize-Winning Essay by Deborah Wilson of Clinton, Iowa

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I wish to have inserted into the Appendix of the RECORD this short essay by a young constituent of mine, Deborah Wilson. This essay is interesting because it points up the fact that our youth are being trained in our schools for leadership, responsibility to the community, and respect for human life. This type of good leadership training does much to counteract those elements in the community which tend to influence our children toward taking part in juvenile crime. Deborah Wilson is a sixth grader. I wish to congratulate her on winning her trip to Washington. We must encourage these leaders of tomorrow today. Her winning essay follows:

PATROL ESSAY

(By Deborah Wilson, Hawthorne School, Clinton, Iowa)

It is extremely important for school safety patrol members to be stationed at dangerous intersections near schools to help direct their classmates, even though traffic signal lights, stop signs, police, or adult crossing guards help protect pedestrians at such intersections.

School safety patrol members should be on duty even when there is a stop sign or traffic signal lights, because it is not always possible for cars to stop. In winter the streets are often icy and cars are not able to stop. Patrol members are better able to judge whether a car is going to stop than younger children are.

Patrol members should be on duty even when there is an adult crossing guard or a policeman there to protect pedestrians. The patrol members like to have an adult crossing guard or a policeman at dangerous intersections with them. This teaches the patrol members to be alert and learn more safety habits. The younger children will respect the patrol members, knowing that some day they will have the chance to become a patrol member too. By working with a policeman or an adult crossing guard, the patrol members will become safety conscious. Safety will become a habit and they will be more willing to observe safety rules and to realize their importance.

The Potentials of Solar Energy

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. UDALL. Mr. Speaker, Arizona is justifiably famous for many things, not the least of which are clear skies, an abundance of sunlight, and a vista of wide horizons. Of course, we have long appreciated Arizona's balmy winters—and lately, through the midwifery of science, we have focused our attention on the potential of sunlight as a new source of power.

Its use has been highlighted dramatically during the launching of our earth satellites by the use of radios powered by solar batteries; small units which produce power continuously and indefinitely when exposed to the sun's rays.

An interesting and informative discussion of the potentials of solar energy is contained in the May issue of the Agriculture and Livestock Monthly News Digest of the Valley National Bank, a publication compiled and edited by my friend, Charles W. Pine.

In a frank outburst of State pride I am inserting this article in the RECORD, as I believe the information it contains will be of value to our colleagues.

The article follows:

Solar energy applications no longer are confined to "science fiction"—as attested to by thousands of authoritative documents and photographs assembled and classified by the Association for Applied Solar Energy, whose headquarters are located here in Phoenix. Through the world, scores of firms are making and selling ingenious devices that trap sunlight and convert it in various ways to useful work. Examples include beacon lights, satellite transmitters, hearing aids, batteries, portable radios, electric clocks and picnic cookers.

Morgan Monroe, former science editor of the Arizona Republic, noted in a recent Reader's Digest article that enough solar energy pours down on 100 square miles of Arizona desert during a single day to operate all U.S. industries around the clock. "How to capture and employ this boundless energy," he pointed out, "is the challenge facing man's ingenuity." True, solar energy scientists haven't even come close to demonstrating how all the sun's power-packed energy can be feasibly employed—but they have proved that sunshine can be constructively used in literally dozens of fascinating ways.

Of interest to our readers will be the following "blueprint for the farm of the future" that we put together as a result of poring over no little AASE literature and interviewing some of its top officials. The farmhouse itself will be air-conditioned (both heated and cooled) by solar energy. Food will be stored in solar-powered refrigerators and cooked in solar ovens. Solar generators (power converters) will provide electricity for lights, appliances and numerous chores around the house and barn. Solar pumps will lift water from underground—and solar stills will purify it. If he wishes, the farmer-rancher can keep comfortably cool by wearing a lightweight solar helmet—which also will provide him with two-way solar-radio communication.

Assuming his wife succeeds in persuading him to build a swimming pool "like all those city folks have," he'll be able to supply it with solar-heated (or cooled) water. The very climate on his farm (or ranch) will be controlled, in part, by solar energy devices that prevent frost and lengthen the growing season. He might even wish to raise a solar "crop"—consisting of algae or some other form of plant life which can convert sun energy into palatable food. If so, he'll undoubtedly want to carry a solar broiler on picnics to cook the family's hot dogs (or "algae dogs," as they may be known then).

Calendarwise, how far in the future is such a farm? If the earth's supply of fossil fuels (coal, oil and natural gas) were to be suddenly exhausted tomorrow, the answer would be "Tomorrow"—for all the above equipment already has been successfully built and tested in various solar energy laboratories around the world. Many of these devices, of course, will never be put to wide- and tested in various solar energy laboratories around the world. Many of these devices, of course, will never be put to widespread use so long as other cheaper-to-utilize sources of energy are available. Viewed with such realism, the answer then could be "Centuries."

The point we want to make at this writing is that all of the aforesaid methods for putting the sun to work have been proved—in the laboratory, at least—and many of them actually are being utilized today. Just a sampling of AASE and other solar energy literature turns up these facts: The U.S. Office of Saline Water is testing a number of salt-water-to-fresh water conversion methods employing solar energy as the "actuator." Denver's Dr. George Lof has developed simple solar distillation units which can be used for small-scale installations, and the world's first commercial solar stills already are being produced by an Algerian firm and undergoing rigorous tests in the Sahara desert.

Two years ago, Michigan State University engineers developed a grain-drying shed using solarheated air. Four years ago, B. M. Bensin told a group of scientists assembled at Tucson that his solar energy-trapping devices had successfully lengthened the growing season in Alaska—enabling him to grow tomatoes out-of-doors just 130 miles from the Arctic Circle. A year before that, Dr. Maria Telkas, noted solar energy scientist, outlined techniques to capture solar heat during the day in chemical compounds—and release it at night, thus preventing frost and accelerating crop growth.

Solar hot water heaters today are in fairly wide use in several foreign countries and, to a small extent, in Florida, California, and Arizona. Here, in the United States, solar heated and cooled homes have been built in locations ranging from Arizona's Paradise Valley to Massachusetts. A small solar water pump, operating on saturated low-pressure steam generated by a solar boiler, has been perfected by University of Wisconsin scientists. In Tucson, Heidore Macou of the

University of Arizona's department of mechanical engineering is testing a large solar refrigeration unit that may lead to development of a compact solar icebox for desert dwellers. Detailed plans explaining how you can heat your swimming pool with sunshine were published last fall in the AASE newsletter, "The Sun At Work."

Purchasable in some U.S. department stores today are a variety of solar stoves and grills, ranging in price from $16.50 to $30. One advertises it can "cook four large hamburgers in 10 minutes on a clear day." Another promises: "Winter or summer, you can cook in less time than it takes to start a fire." (Incidentally, Indians on the Colorado River Reservation near Parker are now baking tortilla-like edibles on solar cookers provided them by University of Wisconsin anthropolgists testing the sociological effects on such cooking on Indian family life.)

Thus, it's evident that solar energy has been harnessed in many forms—or can be harnassed—for farmers of this generation. Nevertheless, it must be emphasized that most solar devices by necessity are custom made for pilot operation—and therefore quite expensive. E. Lee McLean, executive vice president and general administrator for the AASE, notes that one of the most likely solar applications for Arizona will be converters generating electricity for power in isolated areas. But, he stresses, a power converter would have to be custom-made today at substantial initial cost. Until mass production brings down the price, obviously there won't be many buyers. Conversely, manufacturers hesitate to plunge into mass production without a definite market.

Such impasses typify most solar energy development today. Although the scientific know-how is available, down-on-the-farm applications will have to await significant price breakthroughs on production and marketing fronts. (One major manufacturer has announced its intention to go ahead, regardless. Curtiss-Wright Corp. has invested $1 million in a Princeton, N.J., research laboratory where it will investigate commercial possibilities of various solar energy devices. Already it has announced plans for the ultimate marketing of a solar cooker developed by Dr. Telkas. And currently being tested in the San Joaquin Valley is a solar fruit drier which, it hints, is not too far away from market stage.)

Meanwhile, the AASE is strengthening Arizona's claim as the world's foremost information center on solar energy. Its library and encouragement have provided the impetus for a score of high level symposiums on the subject in recent years. This very month, for example, an AASE advisory council meeting in New York City brings together some 30 authorities on virtually every known aspect of solar energy utilization who will exchange information and ideas re: the present state of solar research. Arizona today ranks first among her sister States in many important economic indices. Thanks to her perennial sunshine and the AASE, a not-too-distant tomorrow's list may add one of the most significant of all: "Number of practical solar energy applications in actual use."

Thirty-five Thousand Dollar Loan Limit

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. BREEDING. Mr. Speaker, the following editorial, taken from the Hutchinson News, Hutchinson, Kans., of Monday, May 25, expresses the sentiments of many wheat growers in my area on the $35,000 loan limit on farm commodities. I trust my esteemed colleagues will read this article and realize this limitation will not solve the farm program:

LOAN LIMIT

The Senate has passed and sent to the House a bill which puts a limit on farm commodity loans of $35,000 to any single farmer.

Perhaps this should make us all feel better because a crack has been taken at the big guy in wheat production and other phases of supported agriculture. I suppose it is designed to silence critics of the farm program who point to the handouts to wealthy, large-scale operators as the worst of the sins.

Actually, this is just another phony gesture toward solving the farm problem.

The $35,000 loan limit means that no more than about 18,000 bushels of wheat can be put under loan by a single farmer. Figuring good yields, that means production from no more than 1,000 acres.

One thousand acres isn't a large wheat plot in western Kansas. It is scarcely a practical size with modern machinery.

It is the land, not the people, that produces wheat. It makes no difference whether one man owns 1,000 acres or 10 men own 100 hundred acres each, the surplus will be the same. If Government loans for wheat are legally, morally, and economically right, then they should apply to all wheatgrowers. If they are wrong they should be abolished.

If the Senate wants to limit the amount of wheatland a man can own and operate, it should say so. It should break up the big farms as Castro is doing.

This latest amendment is just another of the half measures which complicate the farm program beyond all solution.

Poison in Your Water—No. 89

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the San Francisco (Calif.) Tribune of August 19, 1958, entitled "Second Line Fails to Halt Overflow."

The article follows:

SECOND LINE FAILS TO HALT OVERFLOW

A city plan to stop sewage overflow near Mission Bay has failed, city officials said today.

New plans to solve the problem were proposed yesterday in an emergency meeting.

The raw sewage is supposed to flow through a trunkline from the rapidly growing northwest portion of the city. The trunkline crosses under the San Diego River bed and ends at the sewage plant near the naval station in South Bay.

FLOW CALLED TOO HEAVY

In recent weeks, the sewage flow has been too heavy for the line, which narrows in diameter as it crosses under the riverbed. The flow has backed up north of the riverbed and oozed out of manholes.

The city tried to correct the situation by building a second line across the riverbed.

Paul Beermann, director of water, engineering, and public works, said the new pipeline across the San Diego river was completed Saturday.

SITUATION IS WORSE

He said city officials had hoped it would solve the problem. But the situation today was worse instead of better, he said.

The bad-smelling sewage oozes out during peak use periods in an area near Pacific Highway and Grand Avenue. It fills a drainage ditch 40 feet wide and a quarter of a mile long.

Another area west of Mission Bay High School also is affected. Sewage has come out of manholes and run along the curb in a residential area.

MOTEL VACANCY TOLD

The stench is sickening, motorists and residents in the area have said.

Edward Lee, who owns a motel near the sewage sump, said he had no guests yesterday for the first time in 18 months.

"One of my guests was sick from the odor and left the motel," he said. "Others say—can't stand the stench. And those who leave won't be back."

The drainage ditch filled with sewage skirts the Mission Bay Park golf course. The mouth of the ditch has been plugged by city workers to keep raw sewage from flowing into Mission Bay.

Beermann said new plans call for rounding off the peak use periods.

TUESDAY WASH URGED

He urged residents of Pacific Beach, La Jolla, Clairemont, and Point Loma to wash on Tuesday instead of Monday.

He said the city will ask the Navy to agree to discontinue putting sewage from Miramar Naval Air Station into the city sewage disposal system. This would cut daily capacity as much as half a million gallons a day, Beermann said.

The water department today said the Navy formerly channeled sewage from Miramar through a primary treatment plant to a large lagoon about 1,000 feet west of the Miramar boundaries.

NAVY PERMISSION SOUGHT

The city is now asking Miramar for permission to reactivate the lagoon. The city would then channel the Miramar sewage to the lagoon.

Other action suggested by Beermann includes inspecting present lines for blockage, studying velocity flow, and checking the efficiency of present pumping plants.

Beermann also urged the study of creating an oxidation pond in Mission Bay.

A John Foster Dulles Diplomatic Academy for Peace Should Be Established as a Lasting Monument to One of America's Greatest Secretaries of State

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 27, 1959

Mr. CRAMER. Mr. Speaker, I am introducing today legislation to provide for the establishment of a U.S. Diplomatic Academy. This bill represents considerable study and thought and was ready for introduction just before the sad events of this week when death came to our great Secretary of State, John Foster Dulles.

Therefore, if a diplomatic academy is created by Congress, I now suggest that the name of this new institution should

be "The John Foster Dulles Diplomatic Academy for Peace."

Eulogies for Mr. Dulles were many but I think that our revered Chaplain, in well-chosen words during his prayer at the opening of the session on Wednesday, stated the purposes for which John Foster Dulles lived and died. I would like to repeat a portion of this prayer but not as a prayer. I repeat it as a guide for the conduct of our American people and our Nation. The Reverend Braskamp said:

Grant that through the discipline of hard experiences and trying circumstances we may learn the needed lessons of patience and perseverance.

May we never yield to moods of defeatism and despair and allow our energies and resources to be weakened and dissipated by fears and anxieties.

Give us the unfaltering confidence that there is a moral and spiritual power in the universe which is working for righteousness and justice, however seemingly frail and feeble our own human efforts and achievements.

Mr. Dulles knew, perhaps better than any living man, the ever present danger that we face from an alien scheme of life. He was worried that we were not devoting our full energy as we should have to fight back against the subversive weapons used by the Leninists of today.

Mr. Dulles commented in the very last two paragraphs of his book "War and Peace":

There may come a time in the life of a people when their work of creation ends. That hour has not struck for us. We are still vital and capable of great endeavor. Our youth are spirited, not soft or fearful. Our religious heritage and our national tradition are not forgotten.

If our efforts are still inadequate, it is because we have not seen clearly the challenge and its nature. As that is more clearly revealed, we shall surely respond. And as we act under the guidance of a righteous faith, that faith will grow until it brings us into the world-wide fellowship of all men everywhere who are embarked on the great adventure of building peacefully a world of human liberty and justice.

Many people in my State of Florida have been thinking very seriously about the effectiveness of the resistance we offer to the world-wide spread of Communism. Perhaps the first forward step was taken at a Kiwanis meeting in Orlando, Fla. This grew into a movement, in turn, for the establishment of a freedom academy and a freedom commission. Companion bills to create these new Government-sponsored movements were introduced by my Florida colleague Mr. HERLONG, and by my fellow Republican Congressman, Mr. JUDD, of Minnesota, whose advice on matters pertaining to foreign affairs is respected on both sides of the aisle in this House. Both Mr. HERLONG and Mr. JUDD, as well as the late Secretary of State, were familiar with a study published in January of 1952 by the Rand Corporation called "The Organizational Weapon," which reported as follows:

The Communists are winning because they have developed a new form of power struggle, a new dimension of political warfare, which makes it possible for them to get to the people in each target nation and to control or manipulate them in ever-increasing numbers in the interest of the Soviets. As long as the Communists can do this and we cannot counteract it, our own diplomacy and aid programs will be largely undercut, while those of the Soviet Union and Red China will achieve success all out of proportion for the money spent.

In principle, I subscribe wholeheartedly to the objective of the Freedom Commission and Academy legislation to counteract the Communist organizational weapons, but I am convinced that we must add the positive action of providing a general diplomatic training school in which our future diplomats can learn in a few years some of what John Foster Dulles learned and techniques in diplomacy he developed in a lifetime. He had no opportunity to go to one source, to one fountainhead of general diplomatic learning, to fit himself for his task. I think we learned our lesson in not providing such training in the great loss that this Nation sustained during the past week. We must move ahead and move ahead now without undue delay.

In my district of Florida, many people have been concerned with the problem of combating the organizational weapons of communism. John Foster Dulles has pointed the way with the accuracy of a bombsight. Without further delay the U.S. Department of State should be authorized to establish a diplomatic school modeled after our service academies. The school can be started at once to counteract the Communists and to train free-world diplomats to carry the message of peace aggressively to all peoples in all lands.

Consequently, I urge that Congress take fast action on this subject and authorize immediately the creation of the John Foster Dulles Diplomatic Academy for Peace.

In the Rand study on the organizational weapon, I find this statement—page 8:

"The proletariat has no other weapon in the fight for power except organization * * * the proletariat can become and inevitably will become a dominant force only because its intellectual unity created by the principles of Marxism is fortified by the material unity of organization which welds millions of toilers into an army of the working class." This stress on organization is the kernel of Lenin's entire viewpoint; it is an emphasis that provides a threat of consistency through the variations in Communist political warfare.

As to our present ineffectiveness, let me quote from an editorial in a recent issue of Life magazine:

The gap lies between our military preparedness at one end and our conventional diplomacy at the other. On this wide and surging front we presently deploy a few smidgens of propaganda, economic aid, and covert intelligence activities. To the Communists, on the other hand, this is the most important front of all. Throughout it, and in depth, they deploy all those techniques of political warfare, both overt and covert, which are the day-and-night work of the world's Communist parties and which were known to Lenin, their inventor, as "the organizational weapon."

This weapon, with and without the help of military threats, is chiefly responsible for all the gains the Communists have made since World War II.

My bill provides that the curriculum "shall include the education and training of students at the Academy concerning all aspects of the international Communist conspiracy, and the education and training of such students in the science of the counteraction to the international Communist conspiracy, to the end that such students can be more useful to their Government in defeating the international Communist conspiracy," but, primarily, it also "shall be designed to meet the present and anticipated needs of the United States for adequately trained officers and employees in the diplomatic service of the United States."

Therefore, my bill encompasses the type of studies to counteract communism that are suggested by the proponents of the freedom academy proposal but it further provides for training in the academy in the basic sciences of diplomacy and it insures that this Nation would have an adequate supply of trained diplomats and consular personnel to serve in one of the most noble and most important professions so far as the long-range future welfare of the United States as well as the free nations and the world is concerned. It has been my belief for some time that there is no excuse, for instance, for sending personnel to a foreign country who are not equipped to speak the language of the country and who do not have a full understanding of the history of the country and the thinking of the people to which they are assigned. The academy, in conjunction with the Department of State and other agencies of the Government, could see that this vacuum is filled through matriculation in the academy. The academy, of course, could also provide for graduate courses in the future for special training when such training is deemed necessary and special jobs have to be done.

The waging of the peace should be our paramount effort and, as such, certainly deserves at least the devotion of equal attention and resources as does the preparation for war. There are presently five service schools—Army, Navy, Air Corps, Merchant Marine, and Coast Guard—to make sure that our trained personnel are available should war be necessary. It is inexcusable to me that an equal effort is not being put forth to prepare for the waging of an equally aggressive battle on the peace front throughout the world.

Airlift and General Gavin

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. PORTER. Mr. Speaker, under consent heretofore granted, I insert a letter I have received from Lt. Gen. James M. Gavin, the wartime hero of the 82d Airborne Division, and until his recent resignation from active duty, the

Director of Research and Development for the U.S. Army. General Gavin's letter comments on my speech in the CONGRESSIONAL RECORD of May 20, pages 7816–7823, on the importance to the national defense of building up an air merchant marine. I am grateful for appreciation from a man like Jim Gavin.

The letter follows:

CAMBRIDGE, MASS., *May 26, 1959.*

Hon. CHARLES O. PORTER,
House of Representatives, Congress of the United States, Washington, D.C.

DEAR CONGRESSMAN PORTER: May I congratulate you on your excellent presentation of the airlift problem in the CONGRESSIONAL RECORD of Wednesday, May 20.

As you know, I have written and spoken on this subject extensively over the past 10 years. It takes little in the way of profound understanding of our national defense problems to realize that an ability to react promptly is the essence of survival in this dynamic age, and the key to our capacity to react is, of course, an adequate airlift.

As you know, too, I participated in prolonged discussions of the subject with the Joint Chiefs of Staff. I have testified before congressional committees on the adequacy of our airlift. It is a confusing problem for the public to understand since much comes out of the Department of Defense as a compromise position that ends up saying something usually in the vein, "in keeping with our present planning concept, our airlift is not inadequate." That point of view is usually arrived at by taking everything with wings, regardless of door size, floor strength, transoceanic navigational equipment, etc., and dividing the total of the lift by the probable cargo requirements. The probable cargo requirements may mean everything to everyone since the planning concept may contemplate, just for example, reacting to any situation with a massive thermonuclear exchange; thus, the cargo requirements would be at a minimum. Repeated assurances of the adequacy of airlift presented in such veiled language tends to have a soporific effect on the public attitude toward this very serious problem.

It is terribly important, therefore, that Members of Congress, such as yourself, have the courage and willingness to lay the facts before the people. It is for this reason, therefore, that I congratulate you for having done so. It was a fine presentation of a problem that is compelling in its need for solution.

Sincerely,

JAMES M. GAVIN.

Mr. Dulles: The Century's Greatest Diplomat

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 27, 1959

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Washington Star by Mr. Constantine Brown:

[From the Washington Evening Star, May 26, 1959]

THE CENTURY'S GREATEST DIPLOMAT—DULLES' RANK SEEN IN DETERMINATION, UNFLINCHINGNESS, AND SINCERITY

Flags all over the free world are at half staff as a last token of respect for John Foster Dulles. The chroniclers of the future will surely describe him as the greatest diplomat in his strife-torn century.

Mr. Dulles died with his boots on. Although he resigned as soon as he realized he would no longer be able to keep a firm hand on the tiller, he continued to give advice almost until his last breath.

Although in agonizing pain, Mr. Dulles refused until 10 days ago to take strong sedatives lest they interfere with his thinking. He wanted to serve his own country and the free world for as long as it was humanly possible. He accepted powerful pain killers, which kept him in torpor most of the time, only when he realized that his end was at hand and the will of the Almighty was to be accomplished.

People have wondered what made Mr. Dulles tick and why he remained so uncompromising in his fight against international communism. Some said that it was his ambition to run America's foreign relations the way he wanted. Others said that he was just stubborn and paid no attention to constructive criticism. The few intimates who had been at his side for many years knew that it was his strong religious conviction and his godliness which made him impervious to criticism and cajoling. A man who believes in God as deeply as Mr. Dulles did could have no truck with the enemies of religion, the Red atheists.

Mr. Dulles was a pillar of the Presbyterian Church in which he was born and one of the most prominent Protestant laymen in the country. Yet, while a devout Presbyterian, he was not parochial. When his son Avery wanted to join the Catholic Church, Mr. Dulles did not remonstrate. He told him that if he believed that he would thus best serve the Lord he had better follow his convictions. Avery was ordained a few years ago. The father was in the church and the first to congratulate and embrace the new pastor.

Mr. Dulles was able to carry on his man-killing task with devotion, energy, and relentlessness only because he was a devout man of God.

Mr. Dulles' greatness as a Secretary of State came not only from his determination to remain unflinching in the face of the danger from international communism but also from the fact that he was able to carry his sincerity to the rest of the administration and thus become the real policymaker of our foreign relations.

Despite President Eisenhower's affection for some of the White House advisers who did not agree with the Dulles brink policies, he trusted his Secretary of State so implicitly that he seldom went counter to his recommendation. This was in contrast with the position of another chief of the State Department, Cordell Hull. President Franklin D. Roosevelt insisted on being his own Secretary of State. There were occasions after Pearl Harbor when Mr. Hull was informed only much later about certain diplomatic moves made by the Chief Executive with the advice of Harry Hopkins. No such unpleasantness ever occurred during Mr. Dulles' tenure.

There is no doubt that Mr. Dulles made mistakes. Only the timid and innocuous can go through life without blundering. But considering the many facets of our foreign rlations, the credit side is far longer than the debit side of the ledger.

This country has had a number of able Secretaries of State in this century. One of the most outstanding was Charles Evans Hughes. But he ranks far behind as second best to Mr. Dulles. The problems which Mr. Hughes had to face from the turn of the century to the outbreak of World War I were paltry compared with the complexities we have had to face since, particularly in the last 6 years.

In Mr. Dulles term of office the United States not only had to resist the onslaughts of the Russians and Chinese Communist enemies but had to walk a tightrope in relations with our own allies. A person with less determination and real dedication to the cause of the free world than Mr. Dulles could never have succeeded in keeping the existing tenuous alliances together.

There was the great effort by a number of our allies and neutrals to give Communist China a seat in the United Nations. Mr. Dulles worked tirelessly and successfully to prevent this crime against the principles for which the free world is fighting.

In the past the chief adviser on foreign affairs to the White House had to be pretty well conversant with only one sector of the world. Mr. Dulles had to deal simultaneously with increasingly complex problems all over the globe.

And until his last days on earth Mr. Dulles handled his tasks with as much success as a human being was capable of, considering the violent tugs and pulls of the era in which we live. He was accused of being inflexible. He accepted this accusation as a compliment for he understood that under existing world conditions flexibility is synonymous with surrender.

Rigged Prices on Government Contracts

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks I wish to have inserted into the Appendix of the RECORD an article which appears in this week's issue of Labor, a national weekly newspaper.

This article states that over the years identical bids have been submitted for a wide range of items needed by the Federal Government. There seems to be more than a coincidence that this identical bidding of many of our big business firms are not the result of clairvoyance but the result of collusion.

It is significant that the closing sentence states so long as this price fixing continues, the talk about free competitive enterprise is bunk.

The article follows:

THEY TALK COMPETITION, BUT RIGIDLY FIX PRICES

If four men sat down to play poker, and each drew the highest possible hand—a royal flush—kibitzers would conclude that either the age of miracles is still here or the cards were stacked. That, however, would be a less remarkable occurrence than one revealed by a report in the Scripps-Howard newspapers.

The report said a study of the records of the Tennessee Valley Authority shows that, down through the years, manufacturers have submitted identical bids when they were asked to offer prices on products TVA wanted to buy. Each time, all the manufacturers, as many as eight of them at a time, offered exactly the same price.

The report gave numerous examples, including electrical equipment, pipe, cement, steel, copper, and aluminum products, industrial chemicals and many others. The names of the companies doing the identical bidding read like a "Blue Book" of American big business.

Why, in all these cases and over such a long period of time, didn't the prices differ by even as much as 1 cent? Such a situa-

tion can't be explained by any miracle. Obviously, the cards were stacked. In each case, the manufacturers must have agreed among themselves on the price each would offer to TVA. Thus there was no price competition.

Yet these same manufacturers and their propaganda organizations keep telling the American people that this is a land of free competitive enterprise.

TVA, the great public-owned power system, is not the only Government agency victimized by identical bidding. That was pointed out by Senator ESTES KEFAUVER, Democrat, of Tennessee, who heads the Senate Antitrust Subcommittee. He said "we have found that identical bids have been submitted for a wide range of items needed by defense agencies, inflating the prices the taxpayers must pay."

This is nothing new. During World War I, but before Uncle Sam got into that conflict, U.S. steel companies tried to hold up the Navy for high fixed prices on armorplate. Navy Secretary Josephus Daniels smashed that conspiracy by getting bids from British companies, which were able and willing to furnish armorplate at lower prices although they were hardpressed to meet Britain's needs in the war.

During the great depression, steel, cement, and some other kinds of companies invariably offered identical prices when they were asked to bid on materials needed for job-creating public works programs. This got so bad that Interior Secretary Harold L. Ickes delayed such programs in an unsuccessful attempt to save money for the taxpayers by forcing "competitive bidding."

The identical bidding has continued during and since World War II. Times of war, peace, prosperity and depression are all the same to big business price fixers. They never compete on prices, no matter how many unemployed workers may be competing for jobs. The antitrust laws seems to make no difference.

As KEFAUVER and others have pointed out, the administered price system which produces the identical prices is a main cause of inflation and constantly rising prices. Yet the big business fixers try to blame inflation on workers' wages.

So long as this price fixing continues, the talk about free competitive enterprise is the bunk.

The Honorable John Foster Dulles

EXTENSION OF REMARKS

OF

HON. ROBERT R. BARRY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. BARRY. Mr. Speaker, under leave to extend my remarks, I would like to include in the RECORD Mr. George E. Sokolsky's column of today. Heretofore, I have attempted to express my belief in the inner force of Mr. Dulles. Mr. Sokolsky has done this in a far greater measure than my poor power:

THE RELIGIOUS MAN

(By George E. Sokolsky)

In the notices concerning John Foster Dulles, emphasis reasonably has been upon his patriotism, his limitless energy, his conspicuous services in the diplomacy of his country since he was a very young man, his enormous salesmanship for the Western alliance.

But there was another and a more fundamental side to John Foster Dulles. He was essentially a man of religion, one who labored because he believed, one who served his country because he served his God.

His father was a Presbyterian minister and the Dulleses were brought up within the moral disciplines of John Calvin and John Knox, believing that prayer is an aid to living and that the moral life is not for externals alone. It had been planned that he, too, should be a minister of the gospel. His grandfather, John W. Foster, had been Secretary of State; his uncle, Robert Lansing, was a lawyer and became Secretary of State in the Wilson Cabinet. Therefore, in the manse in Watertown, N.Y., and later, when his father was professor of theology at the Auburn Theological Seminary, Foster, as he was usually called, was steeped in Bible and in moral law.

However, at Princeton, he decided in favor of the law and devoted himself to that subject and to its international aspects until the emergence of the amoral dictatorship of the 1930's proved that the secular society, uncontrolled by moral idealism, could easily slip back into barbarism. He returned to religious activity and became one of the foremost lay churchmen in the United States.

In search of aggressive, hopeful Christianity, he attended a churchmen's meeting on church and state at Oxford in 1937 and found there the spiritual resurgence that was necessary for him. In 1939, he attended the World Council of Churches at Geneva and thenceforth devoted himself to the union of Protestant sects in the United States.

He traveled about the country preaching the doctrine of a moral order based upon the revelations in Jesus Christ and seeking an international society based upon this moral order. Out of this experience came his "Six Pillars of Peace," which premissed peace upon human rights which were not the product of human decision, to be granted or withdrawn, but which came from God and are therefore eternal and may never be withdrawn in a moral society.

John Foster Dulles' preoccupation with religion knew no bigotry. Within his own family, there were religious differences which he met with breadth and love. His son, Avery, joined the Roman Catholic Church and became a Jesuit priest. The relations between father and son were not impaired by the son's departure from the predestinationism of the Presbyterians to the Thomism of the Catholics.

As a man of God, John Foster Dulles abhorred Marxism. To him, its sociology even more than its economics, was a vulgarization of humanism, a total rejection of divine inspiration, revelation and consent. He could not conceive of a society without moral sanctions and therefore refused to believe that Soviet Russia could maintain the barbaric amorality which marked the earliest phases of communism. And, of course, he proved to be right. For more and more, the Russians themselves renounced their nihilism as hooliganism and now tend to adopt a regimented puritanism to save themselves from the decay which they see in Western libertarian absorption with gaiety and sex.

John Foster Dulles was a moral man. His home life was all that such a man could desire. In another 3 years, he and Mrs. Dulles would be celebrating the golden anniversary of their marriage. It was a warm, friendly household even in the days of his absorption with a private law practice which he cast aside to serve God and his country.

It was in this spirit that he served as Secretary of State. He brought into world diplomacy his concept of Christian ethics. Perhaps that is why, in Soviet Russia, he was abhorred. Christian ethics, the recognition of the inviolability of the contractual oath, are so alien to the Soviet rule of necessity that Mr. Dulles was regarded in that country as their prime enemy. He was. It was Mr. Dulles who arrested the Soviet march forward in the Mediterranean and the southeast Asia areas.

The Tactical Air Command

EXTENSION OF REMARKS

OF

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. DOWNING. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I would like to pay a brief tribute to one of the services of our Armed Forces.

The U.S. Air Force's Tactical Air Command was recently the recipient of two American aviation's most coveted awards—the Mackay trophy in recognition of its swift deployment of the Composite Air Strike Force to the Far East during the Formosan crisis last year; and the Daedalian trophy for the most effective aircraft accident prevention program in the Air Force during the year 1958. I would like to place the story of these accomplishments in the RECORD with a distinct sense of pride since the headquarters of Tactical Air Command is located in the First Congressional District of Virginia, which I am privileged to represent in this House.

Langley Air Force Base, the Air Force's oldest active establishment and located on Virginia's historic lower peninsula, has played an outstanding role in the air age. Named after Samuel Pierpont Langley, the distinguished astronomer and head of the Smithsonian Institute who did important development work in the days of the infancy of aviation, Langley Air Force Base has seen the era of Billy Mitchell and his revolutionary experiments which proved the vulnerability of shipping to air power, and the establishment of the General Headquarters of the Air Force—the first inkling of the independent air arm. Langley has seen literally dozens of young men who are to be the Air Force's future general officers living upon its historic ground.

Tactical Air Command was awarded the Mackay trophy for Xray Tango, the code name for the command's deployment of the Composite Air Strike Force to the Far East during the Formosan crisis. The citation accompanying the Mackay trophy credits the outstanding airmanship of the strike force crews and the skill and effectiveness of support personnel for the success of the internationally significant operation.

The Mackay trophy, established by the late Charles E. Mackay, a member of the Aero Club of America, is presented annually by the National Aeronautics Association for the year's most meritorious flight. Selection of the recipient of the award is made by the Chief of Staff, U.S. Air Force.

The Daedalian trophy, was established by the Order of the Daedalians, an organization of World War I pilots, and

is awarded annually by the Chief of Staff of the U.S. Air Force to the major air command having the most effective accident prevention program.

Lt. Gen. Dean C. Strother, Deputy Chief of Staff for Operations, U. S. Air Force, presented the trophy at the annual meeting of the Order of the Daedalians at Kelly Air Force Base, Tex., on April 11.

Only major commands of the Air Force which flew more than an annual total of 100,000 hours are considered for the Daedalian trophy. In awarding the trophy, the types of aircraft flown and flying conditions are considered.

Tactical Air Command's flying safety record in the dispatch of many aircraft of various types to the troubled Middle East and Far East were undoubtedly factors which contributed to the award of the Daedalian trophy to Tactical Air Command.

The Composite Air Strike Force concept was developed in a large part at Langley Air Force Base. It was the brainchild of TAC's brilliant commander, Gen. Otto P. Weyland.

When the free world stood again on the brink of war in the Far East, Tactical Air Command had a balanced force of combat aircraft with support elements on the scene 16 hours after the many units had been alerted at various Air Force bases, including Langley.

Thus, in the space of less than 1 day, Tactical Air Command had its Composite Air Strike Force with nuclear striking power on combat patrol in the Far Pacific.

It is very appropriate that these two honors were bestowed on Gen. O. P. Weyland, before his retirement after a long career during which he distinguished himself during World War II and the Korean conflict.

Among my many other friends at Langley Air Force Base, I would like to mention Brig. Gen. Perry B. Griffith. General Griffith is the commander of the 836th Air Division, Langley's parent tactical organization, units of which so ably proved the validity of the Composite Air Strike Force concept twice last year. In the 9 months he has been commander of the air division at Langley he has abundantly demonstrated an outstanding degree of belongingness with the people of the local community.

I would like to mention just one example of the fine relationship which exists between Langley Air Force Base and community upon which it lives—not merely exists. Through the efforts of General Griffith and several members of his capable staff and the generosity of the Air Force Museum at Wright-Patterson Air Force Base in Ohio, a diarama showing the bombing of the Ostfriesland by Gen. Billy Mitchell's bombers was presented to the Virginia War Memorial Museum in Newport News. It was my privilege and pleasure to accept on behalf of the museum, this diarama and exhibit of two bombsights. Thus, this pictorial presentation of one of the most important milestones in the story of air power reposes most appropriately in the unique War Memorial Museum, but a few miles from the place where the event took place.

My True Security: The American Way

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. SCHWENGEL. Mr. Speaker, under leave to extend my remarks, I wish to call attention to a prizewinning essay which was written by Miss Dianne Walljasper of Salem, Iowa, on "My True Security: the American Way."

The thoughts of this high school student, as so eloquently expressed in her essay, should inspire all of us.

MY TRUE SECURITY: THE AMERICAN WAY

How often have I said, "Oh, if only I had a million dollars." Suppose someone did give me a million dollars, tax free, to use at my own discretion. Would I be satisfied with this affluent security? Most likely not. A million dollars is not a sanctuary of security. No matter how many material protectives it might purchase, I would still lack true security.

My true security depends upon me for its existence. The whole concept of my true securty rests squarely upon my own initiative and ambition. I feel truly secure only when I can depend upon myself for my needs. Choosing my own calling, developing my talents, earning my own living, winning and keeping my home sacred from intrusion, accumulating other property that may give protection and surety to myself and my loved ones—these are indications of a true security.

Let me quote what a young African journalist, returning to Africa after his recent visit in America, wrote. "I do not think that the average American appreciates the fact that he is enjoying a standard of living which he and he alone in this world can enjoy. I never knew that the average American had so much. I am not saying that Americans do not deserve the things they have; they do, because they worked hard for them. I wish that there was something I could do to convince the Americans, young and old, that they should go down on their knees every day and thank God for what they have."[1] Looking about me, I see the abundance of material things to which the African journalist referred—automobiles, airplanes, skyscrapers, radio and television sets, fertile farms, and busy factories—all evidences of material securities. However, they in themselves do not make us safe or secure.

I am fortunate to live in a country founded by men who loved freedom and prized it above all earthly possessions. Americans usually accept these freedoms as a matter of existence, seldom realizing that these heroic men and women pledged their lives, their fortunes, and their honor for our present security. Obtaining freedom was their objective and has remained the objective of our Nation throughout its history. Each age must build on to the values of the past, must extend the road a little farther.

Our preoccupation with material successes has threatened to blind us to the value of self-initiative and self-reliance, both indispensable weapons in preserving true security. True security cannot be mine if I am indifferent, lethargic, and timid. I cannot be indifferent about Government affairs—I must get out and vote for the best men if I want to preserve my freedoms, necessary forerunners of security. I must get out and use my brain and brawn if I am to acquire and keep my material independence. Timidity must be pushed into the background and courage brought to the fore—courage to participate in religious, social, and political functions, so that I can learn from others and others can learn from me, so that I can help others and accept their help in return. In this way my own initiative will provide for my future and I can truthfully say, "Keep your million dollars, give me my true security."

[1] Swanstrom, Rev. E. E., letter, Catholic bishops' relief fund, Feb. 20, 1959.

Council of State Chambers of Commerce Rates Pennsylvanians

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. MUMMA. Mr. Speaker, a chamber of commerce research group has just recently completed and released a study under which they have rated Pennsylvania's 30 U.S. Representatives on their attitude toward labor legislation. The results were carried in the Patriot, which is published at Harrisburg, Pa.

Mr. Speaker, you see many of these studies more and more these days, made by various and sundry groups or organizations.

The newspaper article which tells of their study follows:

[From the Patriot, Harrisburg, Pa., May 21, 1959]

CONGRESSIONAL DELEGATION FROM STATE MOSTLY LIBERAL

A chamber of commerce research group has rated Pennsylvania's 30 U.S. Representatives on their attitude toward labor legislation.

Seventeen of them, 15 Democrats and 2 Republicans, are "liberal," says the Council of State Chambers of Commerce, which operates a Washington research-analysis office for various State chambers of commerce, including Pennsylvania's.

Eight, all Republicans, are called conservative.

MUMMA CONSERVATIVE

Greater Harrisburg's two congressmen are at opposite ends of the chamber of commerce scale. Republican Representative WALTER M. MUMMA, of Harrisburg (16th District), is labeled a "conservative," while Democratic Representative JAMES M. QUIGLEY, of Camp Hill (19th District), is classed as a "liberal."

The classifications are being circulated in advance of House debate and voting on opposing labor legislation, including the Senate-passed Kennedy-Ervin bill.

The ratings are reported to be based on a consensus of voting record tabulations and the expert opinions of Washington sources intimately associated with legislation in the labor-management field.

In addition to MUMMA, these Republicans are graded as conservative: Representatives PAUL B. DAGUE (9th District), IVOR D. FENTON (12th District), JOHN A. LAFORE, JR., (13th District), ALVIN R. BUSH (17th District), WILLIAM J. GREEN, JR., (5th District), LEON H. GAVIN (23d District), and CARROLL D. KERNS (24th District).

DEMOS LIBERAL

In addition to QUIGLEY, these Democrats are classed as "liberal": Representatives WILLIAM A. BARRETT (1st District), KATHRYN E. GRANAHAN (2d District), JAMES A. BYRNE (3d District), ROBERT N. C. NIX (4th District), WILLIAM J. GREEN, JR., (5th District), HERMAN TOLL (6th District), all of Philadelphia, and STANLEY A. PROKOP (10th District),

DANIEL J. FLOOD (11th District), GEORGE M. RHODES (14th District), JOHN H. DENT (21st District), FRANK M. CLARK (25th District), THOMAS E. MORGAN (26th District), WILLIAM S. MOORHEAD (28th District), and ELMER J. HOLLAND (30th District).

The two Republicans rated as "liberal": Representatives JAMES G. FULTON (27th District, and ROBERT J. CORBETT (29th District), both of Allegheny County.

WALTER NOT LIBERAL

The only Democrat not termed a "liberal" is Representative FRANCES E. WALTER (15th District), of Easton. He's classified as "middle of the road, tends to liberal."

Two Republicans are given this same chamber of commerce designation. They are Representatives WILLARD S. CURTIN (8th District), and JAMES E. VAN ZANDT (20th District).

Poison in Your Water—No. 90

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Omaha, Nebr., Evening World-Herald of August 28, 1958, entitled "Sewer Stink Makes Point With Doctors":

SEWER STINK MAKES POINT WITH DOCTORS—MEDICAL SOCIETY GETS REPORT ON SEPTEMBER 9

(By Hollis Limprecht)

A group of doctors and sanitation experts Thursday took a look—and smell—at "one of the city's most pressing health problems."

That was the description used by Dr. Maurice Grier, president of the Omaha-Douglas County Medical Society, to describe raw sewage in the Missouri River.

He headed the delegation which included members of the society's executive committee and the city-county health department.

The seven persons cruised on the Corps of Engineers launch, *Sioux City*, from the Minne Lusa to south Omaha sewers.

NINETEEN SEWER OUTLETS

They saw the river as a great potential recreation spot and smelled it as it is today, choked by sewage from 19 outlets.

Dr. Grier explained the reason for the tour:

"Unless a person can see for himself, he has no idea of the magnitude of the problem. I had no idea there were that many open sewers."

As the launch nosed into the Grace Street sewer (the smell on Abbott Drive), Dr. Matilda McIntire of the health department said:

"The only way to describe this is a stinking, filthy mess."

COVERED WITH OIL

The backwater was covered with a menacing, black oil slick.

Dr. Grier, speaking of treating sewage, said:

"It's going to cost a lot of money but we can hardly ask upstream and downstream cities to clean up without doing it too."

The doctors rode past the Council Bluffs water inlet, downstream from the Minne Lusa sewer.

As the launch passed another sewer, E. L. Edwards, Corps of Engineers host, asked:

"Smell it?"

There was a murmer of disgust.

POTENTIAL RUINED

Dr. McIntire said her family frequently goes boating on the river.

"But we never water ski or swim in it. The river has great potential which is ruined by the pollution."

Dr. Grier said the executive board will report its findings at its September 9 meeting.

Any recommendations on the coming sewer bond issue would be channeled through the health department, he said.

Others on the inspection trip were Drs. Paul Read, Richard Egan, John Grier and Edward K. Connors of the medical society and M. B. Crabill, health department sanitation engineer.

Geneva and Mutual Security

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mrs. BOLTON. Mr. Speaker, an editorial in today's New York Times, entitled "Geneva and Mutual Security," presents such potent arguments relative to the mutual security bill that I insert it as part of my remarks, as follows:

GENEVA AND MUTUAL SECURITY

At a moment when East and West confront each other in Geneva in a diplomatic showdown of potentially momentous consequences Congress is likewise approaching a showdown on one of our principal weapons in this contest—the mutual security program. This program, for which President Eisenhower has asked $3,930 million for the coming fiscal year, is reaching the end of congressional committee action and will have to be voted upon by Senate and House next month. No doubt some kind of program will be approved, as the need for one is generally acknowledged and there is no real opposition to it. But just what kind of program it will be remains to be seen.

The fact is that after months of discussion the program is still caught in a squeeze play between those who find it too timid and would increase it by billions, and those who find it too large, at least in its present form. Thus Senators FULBRIGHT, KENNEDY, and HUMPHREY are fighting for inclusion in it of a 5-year commitment of $7.5 billion for the development loan fund to be raised by Treasury loans instead of appropriation, which goes far beyond anything requested by the President.

On the other hand, Senator MANSFIELD, while also favoring more emphasis on lending, calls for elimination of defense support and economic assistance grants over the next 3 years as a giveaway that could cause a popular revolt against the whole program.

In line with these arguments the House Foreign Affairs Committee has already slashed the program by $366,800,000, mainly in military aid, while voting an extra $100 million for development loans. And the appropriations committees ax it, as a rule, on principle.

The cut in military aid is particularly ill-advised. This money enables some of our exposed allies, especially in the Far East, to maintain military forces beyond their economic strength. If these forces are cut they may have to be replaced by American forces to check the Communist tide. Military aid may need reorganization, preferably by adopting President Eisenhower's suggestion that since such aid is part of our defense effort it should also be part of our own defense budget. But to cut it at this time could prove disastrous.

The urge for cutting military aid derives from the assumption, popular among Democrats, that in view of the atomic stalemate a hot war is unlikely and that the cold war is rapidly moving toward economic competition, including economic aid. That is true, but only in part and only so long as the military balance is adequate enough to deter Communist aggression. Destroy that balance to our disadvantage, even locally, and a new Korea would immediately loom on the horizon.

This does not mean that military aid should impinge on economic aid. On the contrary, economic aid may well have to be increased to counteract the billion dollars in aid extended by the Communist bloc to 18 selected underdeveloped countries last year. And there are potent arguments for extending such aid in long-term low-interest loans rather than grants. But the whole economic situation in the world is changing, as shown by both the economic prosperity of Western Europe and the replacement of the dollar shortage by a dollar surplus which is taking gold out of this country.

In view of this the administration is rightly skeptical of the proposed long-range commitments, however much it may favor long-range programs. It has, in fact, a most promising substitute in the proposed billion-dollar International Development Association, to which the United States would contribute one-third, with other now prospering free countries contributing the rest.

This project, first proposed by Senator MONRONEY, is due for approval in September. In the meanwhile Congress can do no better than pass the mutual security program as it stands.

Illinois General Assembly Calls for Antilynch Laws

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. MACK of Illinois. Mr. Speaker, as a result of the disgraceful episode which occurred recently in the State of Mississippi, the Illinois General Assembly unanimously adopted a resolution calling on the Congress to pass an effective antilynch law. Under leave to extend my remarks, I include the following:

HOUSE JOINT RESOLUTION 44

Whereas the discovery of the body of Mack Charles Parker has confirmed the fears of the Nation that the Mississippi Negro was the victim of a lynch mob which forcibly and contrary to all tenets of law and decency took him from a jail cell where he was awaiting trial for rape; and

Whereas once a Negro is accused of rape in the South, such accusation places Negroes, whether guilty or innocent, in the gravest danger and invariably denies to them a free and impartial trial; and

Whereas the frequent and sordid miscarriages of justice and lynchings of Negroes damage our world prestige at a crucial time when our free society is fighting the critical battle against communism: Therefore, be it

Resolved by the House of Representatives of the 71st General Assembly of the State of Illinois, the Senate concurring herein, That Congress be respectfully requested to enact

an effective antilynch law so that lynchings will be ended in the South, and that suitable copies of this resolution be forwarded by the Secretary of State to each Member of the U.S. Congress elected from Illinois.

Adopted by the House, May 5, 1959.

PAUL POWELL,
Speaker, House of Representatives.
CLARENCE BOYLE,
Clerk, House of Representatives.

Concurred in by the Senate, May 6, 1959.

JOHN WM. CHAPMAN,
President of the Senate.
EDWARD E. FERNANDES,
Secretary of the Senate.

Achieving World Understanding

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. HÉBERT. Mr. Speaker, I direct your attention to some significant remarks made recently by Sir Kenneth Coles, president, International Society for the Welfare of Cripples, Sydney, Australia, at the annual luncheon meeting of the President's Committee on Employment of the Physically Handicapped.

As you know, our old colleague, Gen. Melvin J. Maas, is chairman of this committee and is doing a splendid job.

Here are Sir Kenneth's remarks:

If we are to achieve a wider degree of international goodwill, and those who are working for it would be unwise to ignore the fact that leaders of a number of nations are making no efforts to foster such goodwill in any real sense, then we must work in those fields where there is a common aim, and where worldwide cooperation is acceptable.

The fields most widely accepted are probably those of the arts and medicine, and of these, physical medicine is particularly so at this time. As healing and preventive medicines have prolonged and saved lives, physical medicine is becoming an economic necessity, if lives so saved are to be useful and not a burden on society.

In all fields of medicine, we have seen a revolution take place—a revolution of greater magnitude and having a greater impact on world economics than any previous upheaval in any time.

You, in this country, have been one of the ringleaders in this revolution—you have fostered its development, and have set up cells in foreign countries—you have infiltrated your experts in rehabilitation into their administration and you have invited their citizens to come to the United States of America to learn the most effective ways of continuing this revolution with greater success.

As a member of the International Society for the Welfare of Cripples, I am proud indeed to have had a small part in it. As the representative of a nation benefiting greatly, I am most grateful to the organizations and institutions who have made it possible for us to develop our rehabilitation services in the South Pacific to a point where we can now give assistance in our turn to countries around us, and who are less fortunate than we.

It must be recognized that so great is the desire for improved facilities in new countries, that any study which is conducted in the Western World will be watched with interest; and any conclusions that are reached will be accepted, and form the basis of action over a wide area.

This is particularly so in regard to placement in industry because, of course, the whole concept of rehabilitation falls down if the patient fails to be acceptable in employment of some kind.

The International Society for the Welfare of Cripples now has 36 countries who are members and others who are affiliated, so that its work is welcomed by voluntary societies in nearly 50 nations.

In many of these countries, rehabilitation is a relatively new concept, and they are desperately short of trained men and women to carry on what are really only skeleton programs.

When we can supply some trained people and then have their graduates come to Western countries for practical experience, then can real progress be made. This is the pattern of international affairs today—those with the greatest need have the least resources to cope with their problems.

During my term of office, I hope to visit many of our members, but one drawback of living in Australia is that one has to make an initial journey of about 5,000 miles before getting anywhere at all.

However, I have visited more than a dozen nations so far, and in every one of these have been impressed with the selfless devotion of the people who give their lives to the work of helping the handicapped and their determination to provide the best services, even if they have to beg, borrow, or appropriate by any means what they require.

We who are conquering polio and tuberculosis insofar as resultant crippling is concerned, and who have almost forgotten that leprosy is still a cruel scourge, are also apt to overlook the fact that in over half the world these diseases are not decreasing.

Shortly before I left home, the Department of Health of the State of New South Wales asked me if our Society for Crippled Children could take over three homes which they were closing for lack of patients; two previously used for tuberculosis patients, and one for children with heart ailments. My reply was that our society was looking for a user for one of our polio hospitals, as we had no fresh cases of residual paralysis from polio for nearly 12 months.

To go from this situation, as I did last year, and within 24 hours traveling northward from Sydney, I find myself being shown over the orthopedic wards of a hospital where not only the beds set as close as possible, and both sides of the corridors lined with beds from end to end, but in extreme cases two small patients were sharing a single hospital bed—I saw long queues of people waiting to share the wholly inadequate services, and doctors and therapists working long hours. I saw children numbering 40 to a room being given exercises by their mothers, as they knelt beside them on a mat, the physical therapist walking up and down the center of the room instructing them and spreading her skill 40 fold in an endeavor to cope with an impossible task.

These modern heroes and heroines of physical medicine look with hope to the International Society to use its influence to get them more equipment, and to train their helpers to become expert in our methods. Can we afford not to help them to the utmost?

In terms of time and travel, they are not far away. This time last week I was working at my own desk in Sydney, and I have stopped off for 3 days en route. If our generation acquires immunity to such cruel cripplers as polio and tuberculosis, dare we take the risk of allowing them to flourish in lands that are no longer remote corners of the earth, but close in time and in frequency of visits by your people and mine?

The program being steadily developed is best implemented by the visits of top-ranking men from the United States and Europe, who will advise on the setting up of clinics and centers, and there develop locally men and women who can be brought to see and be trained at the best centers.

Over a wide area, this has been, or is being done, but it needs an increasing awareness on the part of governments that handicapped people can be an asset and not a burden on the community.

In so many countries I have visited, I have found the same pattern. Centers have been established—men have been cured or their disease arrested, and then started on vocational training courses. Finally comes the attempt to get a job. In Hong Kong a vocational officer at a center for the blind said to me, "So far, I have not placed one blind man in a permanent job—only our own workshop with very limited scope gives some occupation; who wants a blind man with a million refugees seeking employment?"

In another city, I saw the beautiful craftsmanship of 450 lepers spread out for sale, and I said to the supervisor that such work must surely find a ready market. The answer was, "Who will buy the work of a leper?—we cannot sell it."

In an African city it was the same story—"Who will employ a disabled native when three fit men are waiting for every job?"

The problem of employment as you have been examining it here on a national plane, has some quite difficult aspects, some of which do not yield easily even to the most patient and understanding approach. On the other hand, where the handicapped person can acquire a high degree of skill, there is undoubtedly a sympathetic reception and an assured place for him in industry.

But the problem is so diverse, and so individual that we cannot simplify it even in this way. For every 100 unemployed handicapped persons, there are 100 problems, separate and individual, to be studied and worked on, if success is to be permanently achieved.

Looking at the figures presented to the Commonwealth Rehabilitation Committee of my own country up to December 31, 1958, I find of those placed in employment after rehabilitation, over 40 percent were in skilled and semiskilled trades; and over 30 percent in clerical and administrative positions. Only 25 percent went into unskilled and rural jobs. This was over a survey of 17,671 persons accepted for rehabilitation, out of which 11,087 were placed in work. But while this may be some cause for satisfaction, there is another figure—the balance of 5,141 whose rehabilitation was canceled. While, no doubt, some of these obtained jobs as lift drivers and watchmen, there still remains the specter of some 5,000 people, considered fit candidates for rehabilitation, whose only resource is the humiliating one of the invalid pension—and we are a country with relatively little unemployment—less than 2 percent of the total work force.

If we find this problem of employment of the handicapped in our countries difficult of solution, how much more so is it in those lands where there is a fast growing population, almost devoid of industry other than that related to food and clothing?

You can well understand how the reports, the results of careful surveys, and the recommendations made are sought for and studied with keen interest and hope in so many lands. Around the world, linked in a common desire to help their fellows, I have found men and women who think the same thoughts, have the same hopes, and desires, and work toward the same goal—that of providing adequate services for the handicapped.

We do not have to ask for their good will or understanding, nor they to seek ours, for we already have the closest ties, the ties of

service. Surely here is one path to the hearts of men and the brotherhood of nations—one clear way in which we may work toward world understanding.

John Foster Dulles

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 25, 1959

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include editorials from the May 25, 1959, editions of the Flint Journal of Flint, Mich., and the State Journal of Lansing, Mich. They are not only astute evaluations of John Foster Dulles, but they typify the loss which free peoples everywhere feel at his death. The editorials follow:

[From the Flint (Mich.) Journal, May 25, 1959]

CHRISTIAN IDEALS GUIDED DULLES

John Foster Dulles, America's voice in world affairs for more than 6 years, has left behind for history to assess a record of devoted public service and unrelenting adherence to morality in relations between nations.

Only the passage of time will correctly determine whether Mr. Dulles was a great Secretary of State. His accomplishments and his failures must be weighed in relation to the effect they have and will have on world affairs.

There are those who already contend Mr. Dulles will be ranked in history as one of our great Secretaries. Former President Herbert Hoover is one. At the time of Mr. Dulles' resignation from the Cabinet, the former President had this comment:

"We have had many great Secretaries of State. History will rank Secretary Dulles among the greatest of them—and in my view the highest of them all."

President Eisenhower, whose personal affection for Mr. Dulles and faith in his judgment in foreign relations was well-known, contributed a glowing appraisal of his Cabinet officer the day he announced the late Secretary's resignation:

"I personally believe he has filled his office with greater distinction and greater ability than any other man our country has known—a man of tremendous character and courage, intelligence and wisdom."

His critics claimed the qualities which pleased his supporters detracted from his abilities and made more difficult attainment of peace in the world. They accused him of creating crises, of failing to develop imaginative new policies, of "brinkmanship."

The criticism which he endured clamly during his years in the Cabinet might well have been more political than real. That was evidenced when his last illness became known. Some of his severest critics here and abroad expressed sincere regret that America was losing his services in the international arena.

Senator WILLIAM FULBRIGHT, Arkansas Democrat, was a frequent critic of Mr. Dulles. Yet the chairman of the Senate Foreign Relations Committee once said he was "moved to admiration by the spectacle of (Mr. Dulles') courage" as well as his "unrelenting purpose of seeking peace."

Even the sharpest critics of Mr. Dulles conceded that America seldom had had a more hard-headed, resourceful representative in world negotiations. Soviet leaders knew those qualities and didn't like them. The Russians denounced him often and bitterly.

The Kremlin's denouncements of Mr. Dulles during the years they had to deal with him could be the greatest tribute to his success in frustrating the expansionistic objectives of world communism.

Mr. Dulles' record in blocking Russia and Red China is substantial. During his 6 years directing U.S. foreign policy, communism was checked in many places.

Once-skeptical Asians are glad today that Mr. Dulles held firm when Peiping threatened Quemoy and Matsu. Since Tibet, they see the face of communism as Mr. Dulles saw it.

Whether or not one agreed with the international policies Mr. Dulles followed, there was no question of his devotion to the ideal of world peace and his physical courage in unrelenting pursuit of that objective.

Earlier this year, when the cancer which caused his death was adding to his pain and reducing his stamina, he went to Europe to discuss with our allies the Western position in the Berlin crisis.

Before he left for home and a return to the hospital, he had whipped an agreement into preliminary form and obtained unanimous agreement on the program which was presented at the Foreign Ministers Conference at Geneva May 13.

Mr. Dulles was probably one of the world's most traveled men. He believed in personal diplomacy and was willing to go anywhere if his presence could advance the cause of peace. He kept up those travels even when illness undermined his strength. He traveled a fantastic 560,000 miles hunting a way to peace.

His great strength in foreign affairs and his world prestige was due in considerable part to his intellectual firmness and his dedication to the ideal that Christian principles should be adhered to in the international arena. He believed morality among nations would insure peace.

If all the nations some day accept and adhere to the principles which Mr. Dulles advocated so vigorously, this world will have benefited immeasurably from his extensive participation in international events.

[From the Lansing (Mich.) State Journal, May 25, 1959]

JOHN FOSTER DULLES

In the death of John Foster Dulles, America and the rest of the free world have lost a courageous and devoted leader in the search for an enduring peace with freedom and justice for all mankind.

A saddened Nation is paying tribute to the great American who died in its service and as it does so it is joined by all people who cherish liberty and peace.

In the six crisis-marked years he had served as Secretary of State, Mr. Dulles worked tirelessly and with great personal sacrifice for the causes represented by his country's basic foreign policy of peace with justice and honor.

When cancer forced his retirement from the high office in which he had served with selfless dedication to the vital tasks assigned him by President Eisenhower, Mr. Dulles continued to exhibit the courage and thoughtfulness for others which were characteristic of his long career of public service.

Commentators have said that only the events of the future can give the final answer to the question of whether the policy that he pursued was wise.

But no matter how historians of the future evaluate his policy in the light of unfolding events, Mr. Dulles already has won a secure and honored place in history as a valiant defender of freedom against the expansion of Communist tyranny.

While there were those who believed that Mr. Dulles was too rigid in his relations with the Communists, what some criticized as inflexibility was widely supported as the degree of firmness essential to the preservation of freedom in the face of the menace of Communist imperialism.

Many of Mr. Dulles' fellow Americans who had once commented humorously on his far-flung travels now see the thousands of miles he had traveled in the performance of his duties as one of the measures of his devotion to his country and to the principles for which it stands before the world.

Death has deprived free men of John Foster Dulles' active services but there is good reason to believe that his example as a champion of freedom will continue to serve as an inspiration as long as the struggle between freedom and tyranny continues.

During the 6 years John Foster Dulles served as President Eisenhower's strong right arm and as the spokesman for the American people in the councils of world diplomacy, the defenses of freedom have been strengthened, largely through his tireless leadership in behalf of the principles in support of which the nations of the free world stand united.

A few days before Mr. Dulles' death, the President bestowed upon him the medal of freedom—the Nation's highest civilian decoration. No American has been more deserving of that high award.

Mr. Dulles has earned the lasting gratitude of his fellow Americans and of all who love freedom and peace.

It is most fitting that the great American who served his country with such deep devotion both as Secretary of State and in his country's uniform in World War I is to be buried in Arlington National Cemetery, there to rest in honored glory among the Nation's heroic dead.

Armenian Independence Day

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. BOLAND. Mr. Speaker, independence and freedom had been the national aspiration of the Armenian people suffering under alien conquerors in their homeland. For centuries they had cherished this dream; though well aware of the almost insuperable difficulties in attaining their national goal without effective aid from friends and sympathizers abroad, still they nursed the idea as part of their spiritual nourishment. The more they were oppressed by their overlords, and the more they suffered under unbearable conditions, the more fervently they clung to the idea, and only in its realization they sought their salvation. And toward the end of the First World War, at a terrible cost in human lives, they had their reward within their grasp.

During that war about 1 million Armenians had lost their lives in Turkish massacres, but many hundred thousands who survived that holocaust escaped to the Caucasus, joined their kinsmen in a northeast corner of historic Armenia there, and proclaimed their independence on May 28, 1918. That was 41 years ago, and since then the independence thus attained has vanished into the dreamland again. After enjoying the

sweetness and blessings of free and independent life, unhappy Armenians were to fight for their freedom in a hopeless, life-and-death struggle against both Turkish nationalist forces and Communist Russia's Red army. The unfortunate end came early in December of 1920, when the country was overrun by the enemy forces, part of it was retained by the Turks while in another part a Soviet type of government was instituted under the direct control of the Kremlin.

Today for more than 38 years the Soviet regime rules over Armenia as one of its 16 constituent republics. There all vestiges of freedom are banned, and collectivization as well as regimentation has been in full swing. The people have been enduring under this totalitarian dictatorship and at the same time hoping and praying for their freedom. On the anniversary celebration of Armenian Independence Day, we echo their genuine feelings and hope that they will be rewarded in their expectation.

Award Presented to C. O. Watts for Flood Control Work

EXTENSION OF REMARKS
OF
HON. CLIFFORD DAVIS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. DAVIS of Tennessee. Mr. Speaker, Mr. C. O. Watts of Rougon, La., was recently presented a Department of the Army Certificate of Appreciation by Maj. Gen. William A. Carter, president of the Mississippi River Commission.

Mr. Watts has been one of the most intelligent, faithful and effective leaders in the whole program of flood control in the lower Mississippi Valley. A man of unimpeachable integrity, motivated by unselfish patriotic impulses, he has been a tower of strength as the Corps of Engineers has approached this problem of controlling the waters of the Mississippi as they sweep to the gulf.

I am including in this statement a newspaper account which shows the language of the citation, signed by Hon. Wilber M. Brucker, Secretary of the Army, and Maj. Gen. Emerson C. Itschner, Army Chief of Engineers.

CERTIFICATE OF APPRECIATION, CITATION PRESENTED TO C. O. WATTS FOR WORK DONE IN INTEREST OF FLOOD CONTROL—MAJ. GEN. WILLIAM CARTER GIVES AWARD IN BEHALF OF DEPARTMENT OF ARMY

At a public hearing conducted aboard the steamer *Mississippi* in New Orleans, C. O. Watts, of Rougon, was presented a Department of the Army Certificate of Appreciation by Maj. Gen. William A. Carter, Vicksburg, Miss., president of the Mississippi River Commission.

The certificate was signed by Wilber M. Brucker, Secretary of the Army, and Maj. Gen. Emerson C. Itschner, Army Chief of Engineers. It was the first flood control award given in Louisiana.

CORPS CITATION

Written on the citation was:

"For distinguished service to the U.S. Army Corps of Engineers from 1912 to 1959 as a member and president of the Atchafalaya Basin Levee Board, Mississippi Basin Levee Board, Mississippi Valley Flood Control Association, Louisiana Association of Levee Boards, and as a private citizen.

"His outstanding accomplishments in maintaining flood control structures and carrying out other obligations of local interests essential to the floodproofing of the lower Mississippi Valley, and his knowledge and judgment and unselfish cooperation were of benefit to the corps in its river and harbor and flood-control misison in the lower Mississippi Valley.

"Through such cooperation he has helped to gain for the Corps of Engineers and the Army great prestige and public support."

Watts has been with the Atchafalaya Levee Board since 1925, under eight State administrations. Under his guidance, the board was active in the flood of 1929, 1937, 1945, 1950, and, when he was not on the board, he assisted the Army corps in the 1949 flood.

What Do We Mean by Free Speech?

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. McDOWELL. Mr. Speaker, the speech at the banquet celebrating the 50th anniversary of the school of journalism, University of Missouri, was given by the distinguished author of the best seller, "Only in America," who is also a widely syndicated columnist for the Scripps-Howard Newspaper Alliance, Mr. Harry Golden.

Mr. Golden, a southerner, spoke on the subject of free speech.

I include, for the information of my colleagues, the text of Mr. Golden's speech:

WHAT DO WE MEAN BY FREE SPEECH?

(Address delivered by Harry Golden, of Charlotte, N.C., at the banquet celebrating the 50th anniversary of the school of journalism, University of Missouri, Columbia, Mo., May 8, 1959)

What do we mean by free speech?

We know that if we can explain it we will at the same time explain the concept of democracy of freedom, the entire concept of our Western culture.

We also know that free speech is a license of some sort. It is not a complete license. The American courts have helped us in this determination. Free speech, said Oliver Wendell Holmes, does not give us the privilege of yelling fire in crowded theaters when there is no fire, nor does free speech give us the privilege to slander our neighbor, nor even our enemy. Free speech does not entitle us even to slander the enemy of society.

By free speech, I suppose, we mean the unimpeded dissemination of ideas: ideas unimpeded by fear of physical punishment. Speech without personal punishment. The right to express ideas that run contrary to popular opinion.

Ideas that run contrary to public opinion have always been expressed. Free speech aids such ideas; but these ideas are not necessarily the greatest ideas expressed by men. Indeed, the greatest ideas are usually those which only advance the ideas of the majority by slight modification. Free speech also means that the majority has the right to override and ignore certain ideas.

Contrary opinion has always been with us. Athens did not have such a thing as free speech, yet it produced great thinkers, most of whom at one time or another went against the grain of the majority. These thinkers were willing to pay the penalty, sometimes death, sometimes banishment, sometimes silence. Yet there were other thinkers who expressed equally great ideas with which the majority found immediate accord. The poet Heisod issued the first agricultural pamphlets. Aeschylus condemned the barbarity of the Persians and was applauded for it and wrote an undying drama. Aristophanes teased the state religion and audiences lionized him. But there were some who suffered. There were those who did not agree. There were traitors and doublecrossers and tax-dodgers, and, of course, honest men.

The Achilles heel of Athens was the fact that though she could produce great men, she could not tolerate them. This should not be a surprising fact: the Inquisition burnt the works of Dante and eminent Englishmen, thought William Blake was only a looney printer. Athens is the inventor of this Achilles heel.

Its great thinkers spoke out. Socrates did not fear punishment. He founded philosophy. "The unexamined life is not worth living," he told his listeners. And this was a profound concept and founded Western philosophy but it was also unpopular and Socrates insisted on paying the penalty. He drank the hemlock. Aristotle didn't worry about punishment either. But when Alexander began conquering the world—Alexander the young prince whom Aristotle had tutored—Aristotle fled Athens because of the Athenians. He was afraid they would make him drink the hemlock, too. And he did not want the Athenians to sin against philosophy.

The gamble worked for St. Thomas, but not for Galileo. When Galileo begged the bishop to look in the telescope and see for himself that the earth revolved about the sun, the bishop said he wouldn't dare. If he saw what Galileo said he'd see, he knew the devil would have put it there. When Galileo climbed to the top of the Tower of Pisa and dropped two objects of different weight to prove that they fell with equal speed, all he did was prove to himself that the physics of his day was wrong but he proved to his contemporaries only that he was wicked.

There was a problem. Free speech was not a concept. The dissemination of ideas was a struggle rather than a privilege. Plato did not talk about politically free speech—only the philosopher had political freedom, nor did Aristotle. Galileo did not beg for it. Men believed they had to speak truth. They did not believe there was any doubt in ascertaining truth. They did not suspect that different truths need different sanctions. Or that truths can cause war.

What changed this was the invention of the printing press. This became a severe problem. St. Thomas and Maimonides and Luther agreed on the truth of a monotheistic God, but now it was not a parochial audience which would hear them out—it was everybody. Monotheistic God or not, they disagreed. How can you sanction truth? And philosophers for the first time realized, you can't. You can only sanction speech.

Free speech in the beginning served the interests of the theologians and the philosophers. Martin Luther and Descartes. This does not mean that the rest of society was unaffected. Oh, indeed not. There was an aristocratic society with a new middle class growing, there were commercial ideas in direct conflict to the tenets of the Catholic Church and this battle was being fought in the higher realms of books and sermons. After a century of burning bodies at the stakes, of wars, of tortures, society began to realize the need for speech without punishment. Punishment or not, speech was not stopped. And so the philosophers began to dedicate themselves to a minute analysis of free speech as an abstract concept. And the

classic statement on free speech was finally developed at the beginning of the 19th century. John Stuart Mill in his pamphlet "On Liberty" offered three incontrovertible reasons for allowing free speech. They were: (1) You may be wrong: free speech will eventually let you hear the truth and set you right; (2) you may be only partially right: free speech will correct your errors; (3) you may be totally right: free speech will let you hear the contrary view and confirm your truth.

It is quite obvious that the modifications the U.S. courts have made in free speech since Mill have always been to enlarge and define speech—really to give a better shake to the minorities. But I think it is a mistake to imagine and involve in free speech the idea anti-Semitism or anti-Negro feeling, an antisubversion. Free speech should be at the service of the majority, too. We must emphasize the idea that free speech is a pro-American idea.

It has been the standard procedure of publicists and spokesmen for minority groups to proceed with a long recital of the accomplishments and contributions the minorities have made to free speech. But here, let me be the first to extend congratulations to what is known as "the majority" which usually sits back and listens to these recitals with good taste and with gallantry, and with not too much cynicism, I may add.

I have often thought that it is a pity that "the majority" which no longer needs to prove itself has denied us, "the minorities," a recital of its own accomplishments and contributions. It was precisely the Protestant majority in Virginia and the Carolinas after all, which sanctioned free speech and made it a cornerstone of the American democracy. And the accomplishments and contributions of the minorities are a reflection of the culture which surrounds them and it would serve as a fitting reminder and a greater awareness if we emphasized the part "the majority has played in establishing this great American free society. I hope therefore that you do not consider me presumptuous if I based my theme on the contributions of "the majority" to the American idea and to the principle of free speech.

I'll go back no further than the Reverend William Tennant of South Carolina who stood at the constitutional convention of South Carolina 3 years before our establishment of the Federal Constitution, for the most important principle of this American idea—the separation of church and state. Several of the delegates told the Reverend Tennant that he had nothing to worry about—that mid-18th century America was a child of the enlightenment and with men like Jefferson, Hamilton, Madison and Mason around there was little to worry about indeed. But the Presbyterian Reverend Tennant knew better. He said the air can change and so can the hearts of men. It would be a better idea to put it on the books: and so this wonderful man together with Mr. Pinckney and Mr. Rutledge and General Gadsden helped remove forever the civil and political disabilities that had been imposed in this society on those groups that did no adhere to the majority religious faith. It was the Protestant majority who established this principle of the American idea—that the differences of ideas is the greatest of all virtues and that it must not generate anger or division.

Is it not this very principle that we seek when we try to define free speech? The separation of church and state is the single greatest aid to free speech, which leads us to a definition of the civilized man, if I may make so bold, the man who respects new ideas, who respects the opposition, and who respects himself.

We often over-emphasize the equality of man in our society when the basic idea of America really means the acceptance of man. It is by accepting men and hearing him out, that we may finally achieve a wide and free dissemination of ideas—because we allow for such a thing as different men and different ideas.

The Dutch in Holland did not produce a Franklin D. Roosevelt; nor did the Irish in Ireland produce an Alfred E. Smith. Nor did the Germans in Germany produce such humanists as Wendell Wilkie and Bob Wagner. It was not the change in geography that paved the way for these men of genius. When they left the country of their origin they encountered here—this American idea—the meaning of Reverend Tennant of South Carolina and the early Virginians.

It is no coincidence that the Jewish people made their greatest contribution to civilization after the ghetto walls had been destroyed. They had built around themselves in the ghetto walls the fair ramparts of culture. In the dark ages when millions of people lived and died without ever having seen a written word, nearly every Jew could read and write. Yet it was not until the door was opened, opened upon the distractions of the world, but a world where some ideas could be disseminated, that the Jews produced a Spinoza, a Mendelssohn, a Disraeli, a Brandeis, and an Einstein.

The Parsis, who like the Jews have been contemporaneous with nearly all of recorded history had long centuries ago developed a culture of the highest order; yet in segregated isolation they sat in almost total darkness until the beginning of the 19th century when the door was opened to human relationships—to the free interchange of ideas with other men. They proceeded then to add immeasurably to the wealth and to the culture of Bombay and India.

With over two centuries of free speech behind us we have learned this: where there is resistance to the freedom of human relationships the resistors lose as much as the resisted, which is the great pity, and in the science of these human relationships, we must first discard the scare words. The interchangeability of ideas and the opportunity for all to burgeon out for themselves all that is within them has nothing whatever to do with what a man believes, but what he resists. Some men want to forward and advance their own ideas and impede no others: some men want to make rigid their own ideas and impede all others.

The greatest weapon we have in the fight to eliminate prejudice is free speech. The guarantee of free speech in the South has done more to aid the Negro in his cause than anything else. For it is the majority who speak now and question, just as it is the majority who will enforce integration.

Statement and Letter Re Admiral Strauss

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 12, 1959

Mr. BOW. Mr. Speaker, in the CONGRESSIONAL RECORD for last Monday, May 25, 1959, there appeared the remarks of Representative WOLF, from the State of Iowa, in which he inserted a Drew Pearson article entitled "Textile Men Get Strauss 'Payoff'."

Normally I would not waste the time to take notice of a Drew Pearson article. Mr. Pearson's disregard for truth has been aptly characterized by Presidents of the United States in strong language. In this case I feel obligated to make reference to the introduction of the intemperate article by the gentleman from Iowa.

I doubt whether the gentleman from Iowa has even met Mr. Strauss; yet he blandly accuses Mr. Strauss of a lack of high principle and of being a dealer in falsehood, smear and chicanery. Apparently this characterization springs from what he recently has read or heard about the 1956 hearings and reports on the second supplemental appropriation bill, 1957.

I suggest to the gentleman from Iowa, that before he got too incensed he should have looked at the RECORD. In that connection, I ask that the statement issued by five minority members of the Public Works Subcommittee at the time the hearings were released in July 1956 be inserted at this point in the RECORD.

I also ask that a letter written to Senator MAGNUSON on May 23, 1959, by Mr. TABER, ranking minority member of the Appropriations Committee; Mr. JENSEN, ranking minority member of the Public Works Subcommittee, and three other members of the Appropriations Committee, including myself, be inserted in the RECORD at this point.

I hope the gentleman from Iowa will read these, as I am sure he will then realize there is no basis for his defamation of such a dedicated public servant as Admiral Strauss.

The statement and letter follow:

STATEMENT BY MESSRS. TABER, JENSEN, ANDERSEN, PHILIPS, AND HAND

The printed hearings of the Appropriations Subcommittee on Public Works, just released, included testimony on the fiscal 1957 budget requests of the Atomic Energy Commission. It offers a startling example of political "doctoring" of an official record.

As released to the press, the document misrepresents some portions, and distorts other portions, of the actual testimony.

For example, in the committee room, Chairman CANNON said to Chairman Strauss of the Atomic Energy Commission (as we recall the statement, which can easily be verified by the original transcript) something like this:

"Mr. Chairman, your testimony has been satisfactory. You have a difficult and complicated problem. You are serving one of the most important interests of our times and apparently you are doing it as efficiently and as expeditiously as we have reason to expect."

Mr. CANNON also complimented the Commission on the manner "in which it has handled its budget and on its dealings with the committee, and especially the economical way in which it approached the whole subject."

In the politically edited version of the hearings, the above statements by the committee chairman have been removed, along with Mr. Strauss' responses. Unwarranted remarks, derogatory to Admiral Strauss, Dr. Libby, or other AEC witnesses, were kept in the hearings. The minority members objected frequently to the arbitrary and often discourteous treatment of witnesses representing the majority views of the Commission.

The record has been juggled to give false weight to testimony appealing to the bias of the committee majority while other testimony has been omitted from the printed record. In at least one instance, the remarks

of a minority member of the subcommittee were stricken without his permission.

During a colloquy between the committee chairman and Mr. Strauss (pp. 63–71 of part II of the printed record) the committee chairman asked Mr. Strauss to give the clerk a statement, representing the view of a majority of the Atomic Energy Commission on the subject of the Gore-Holifield atomic power acceleration bills which Mr. Strauss wanted to place in the record. This statement is omitted from the printed record. A long statement representing the one-member minority view on the Commission is included in full. It is interesting to note that this one member, who now advocates a crash program, which testimony shows to be inimical to the best interest of the Nation, was himself opposed to the extended Federal financing program idea in January. Through the entire hearings he was given space and recognition, as opposed to the three members of the Commission present who did not support this crash program and the absent member who was reported to agree with these three. In this Nation, a vote of four to one is presumed to represent a decision. In the committee, the politically inspired opinion of one Commissioner seems to influence the committee majority.

Readers of part 2 of the hearings will be interested to observe the headings of various paragraphs and to compare them with the indexed hearings. Reference from the index to the pages indicated will fail to disclose the listed headings in many instances; in turn, a great many of the actual headings will not be in the index. Many of the nonindexed headings are both political and inaccurate.

These hasty examples are sufficient to show that the printed record is not a true account of what transpired in the hearings of the Atomic Energy Commission before the Appropriations Subcommittee.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 23, 1959.

The Honorable WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce, U.S. Senate, Washington, D.C.

DEAR MR. CHAIRMAN: You are in receipt of a letter from Chairman CLARENCE CANNON, of the House Appropriations Committee, in which he states: "In denying the truth and accuracy of the printed hearing record of the House Appropriations Subcommittee, Mr. Strauss is implicitly impugning the integrity of the subcommittee and the full committee of which the subcommittee is a part." We are members of that committee. We emphatically disagree with Mr. CANNON.

It was not Secretary Strauss who at the recent Senate hearings on his confirmation initiated criticism of the 1956 printed record of the hearings. It was 15 members of the Appropriations Committee, including us, who signed a critical minority report back in 1956. Secretary Strauss at the recent hearings before the Senate Interstate and Foreign Commerce Committee, in response to questions by Senators, and in defending himself, quoted from our report. Secretary Strauss had every right in the world to refer to this public document as evidence in support of his defense against unjust attacks and conclusions in respect to his public service.

The following is what was uncovered in 1956 in connection with this matter.

The events in question occurred as a result of hearings before a Subcommittee of the Appropriations Committee of the House in the 84th Congress during June and July 1956 and the charges made by Mr. CANNON and the defense by Mr. Strauss center around the accuracy of the printed report of the hearings at that time.

Fifteen members of the Appropriations Committee signed a minority report which began as follows:

"We find ourselves unable to support a report, the conclusions of which are not in accord with the testimony. We cannot approve printed hearings from which pertinent testimony has been omitted, or which has been molded to meet the desire to make a case, irrespective of the evidence (the words "irrespective of the evidence" are italicized) in favor of public power from atomic resources."

The fact is that the printed hearings did omit material testimony and did include material which on its face proves the charge of the 15-member report that the printed hearings are not a factual account of the testimony.

For example, pages 41, 42, and 43 of part I of the printed hearings indicate that Chairman CANNON introduced on June 13, 1956, a letter into the record at that point which in part reads as follows:

"I direct your attention to pages 9181 through 9188 of the CONGRESSIONAL RECORD of Wednesday, June 13, wherein this advertisement is severely criticized and pointedly ridiculed by Senator CLINTON ANDERSON, of New Mexico, chairman of the Joint Congressional Committee on Atomic Energy."

As the CONGRESSIONAL RECORD for June 13, 1956, was not available until the next day, June 14, the letter in question could not have been written on June 13, 1956, nor placed in the hearing record by Chairman CANNON on June 13, 1956, as the printed hearings indicate. If this is not conclusive evidence that the printed record was, to use the softly worded assertion of the minority, "molded"—any other description of what was done with it might require a less tactful word.

Those who were present at the hearings recall that Chairman CANNON opened with encomiums and compliments to the Commission to which the Chairman of the Commission responded in kind. These were edited out before the transcript was printed, but not very skillfully edited, because on page 71 of part I of the printed hearings one of the members of the committee is quoted as follows:

"Mr. Strauss, I certainly respect you as a very able gentleman, and as the chairman of a very important Commission, a very great Commission. I wish I could share the applause of our chairman for your Commission."

This remark is altogether meaningless in the context since the chairman's complimentary statements to which the member referred were edited out.

Pages 41, 42, and 43 of part I of the printed hearings contain the major portion of a letter to the editor published in a local newspaper on June 25, 1956, yet this letter is baldly made a part of the testimony of June 13, 12 days before the letter appeared. This is certainly a molding of the printed record. The minority report took note of this. The minority noted that the inclusion of a letter written long after the hearing and imbedded in the record as a part of the testimony without explanation and without an opportunity for the committee to agree to its inclusion or question statements contained in it was irregular. The minority report noted furthermore that in order to prevent divulging the date, the first sentence of the letter was deliberately cut. This was unprecedented procedure and deeply disturbing to many members of the committee.

Chairman CANNON'S current attack on Mr. Strauss is not generated by the current incident to which he ascribes his letter. It is of much older date. To support this assertion, let us quote again from the minority report signed by 15 members of the Appropriations Committee, including us.

"Chairman Strauss, and the two other Commissioners present, were treated with unwarranted disrespect, and at times with abuse when they attempted to present facts. The three Commissioners were hindered in the presentation of their testimony, or were prevented from giving complete answers, or were denied the privilege of inserting pertinent information in the record."

Let us quote to you one further portion from the minority report:

"The original issue of the committee report, furnished the full committee at its meeting this morning, July 20, was so full of inaccurate, and at times almost libelous attacks on the chairman of the Commission that several of the majority members themselves could not stomach it. We hope it will be cleaned up before it is filed with the Congress. The bitterness of the personal and untrue attacks on Commissioner Strauss, Mr. Cisler, and other men who happened to disagree with the committee chairman's predecided opinions, or with the suggestions of the lone minority member of the Commission, is unequalled in the memory of minority members of this committee.

"The readers of the report, at some future date, when the heat of the argument has cooled, but the report regrettably still stands as an official record, must understand that the slanderous assertions, if allowed to remain, are untrue, unfair, and unworthy of a committee whose past actions have demonstrated greatness, not pettiness, and that we not only disagree, but say to Chairman Strauss, and the other under attack, that we rank them among the great and the patriotic citizens of this Republic, willing to suffer these indignities in the service of the United States."

We have in our possession a copy of the press release put out by the minority members of the subcommittee the night the hearings were released, July 20, 1956.

We also have in our possession photostatic copies of each page of the original transcript referred to in this letter and all of these are available for your examination.

If the minority report is not already in the record of your committee's hearing, we ask that it be placed in the printed hearings.

We respectfully request that this letter be placed in the printed hearings of your committee on Mr. Strauss' confirmation.

Respectfully,
JOHN TABER,
BEN F. JENSEN,
IVOR D. FENTON,
GERALD R. FORD, JR.,
FRANK T. BOW,
Members, Committee on Appropriations.

Minority Report on Public Power From Atomic Sources

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 12, 1959

Mr. BOW. Mr. Speaker, so that the Members may have a more complete understanding of the issues raised by the gentleman from Iowa and others concerning the testimony of Secretary of Commerce Strauss during consideration of the second supplemental appropriation bill, 1957, and in support of the letter and statement I have previously presented to the House on this subject,

I include with my remarks the minority report on this bill:

MINORITY REPORT, 84TH CONGRESS, 2D SESSION, HOUSE OF REPRESENTATIVES, REPORT NO. 2849, SECOND SUPPLEMENTAL APPROPRIATION BILL, 1957

We find ourselves unable to support a report, the conclusions in which are not in accord with the testimony. We cannot approve printed hearings, from which pertinent testimony has been omitted, or which has been molded to meet a desire to make a case, irrespective of the evidence, in favor of public power from atomic sources. We oppose committing the Government to spend large amounts of money which would otherwise be spent by private industry; and to building reactors in various parts of the world before we have established the relative merits of these reactors by continued research in the United States. We are unwilling to jeopardize the security of our own Nation by spreading our scientists, our industrial know-how, and our own recognized advances in a critical field, prematurely and thinly over so great an area as the report contemplates. Evidence submitted before this committee, as well as at Geneva, indicates this Nation is ahead of all other nations in the development of atomic energy for peaceful uses, as it is for the demands of atomic powered war. We want to keep the United States in this position.

We believe the proposed crash program, supported by only one member of the Atomic Energy Commission (in opposition to the considered judgment of the other four members, and of skilled scientists and technicians on the Commission's staff) is intended deliberately to open the door for Federal domination and control of atomic power. This would be a long step toward the complete socialization of the electric utility industry, at a tremendous cost to the taxpayers.

Senator GORE, of Tennessee, who is one of the sponsors of the legislation which would authorize this "crash" program is quoted by the Evening Star of Washington, D.C., in the issue of Wednesday, July 18, 1956, as saying, regarding the bill, that "he regards its provisions for Government construction of atomic power plants as one of the keystones of a four-point public power program he expects the Democrats to spell out in their platform at the party's Chicago convention." This same article called attention to a statement, in the Senate, that President Eisenhower would veto the bill if it were passed by the House.

The Atomic Energy Act of 1954 is the law. The use of atomic energy and power, for the benefit of all the people, must be developed under the act. The declared purpose of that act was that (a) the development, use, and control of atomic energy shall be so directed so as to make the maximum contribution to the general welfare, subject at all times to the paramount objective of making the maximum contribution to the common defense and security; and (b) the development, use, and control of atomic energy shall be directed so as to promote world peace, improve the general welfare, increase the standard of living, and strengthen free competition in private enterprise.

This act became law less than 2 years ago, on August 30, 1954.

There can be little doubt that S. 4146 (H.R. 12061) upon which this "crash" program is based, represents an amendment to the Atomic Energy Act of 1954, contrary to and inconsistent with the declared policy of that act, shown in (b) above.

By no stretch of the imagination can the the proposed "crash" program strengthen free competition in private enterprise.

The Atomic Energy Commission is charged with carrying out of the policy prescribed by the Atomic Energy Act of 1954. Four of the five Commissioners, accompanied by staff members, appeared before the Public Works Subcommittee of the Committee on Appropriations, from June 13 through July 3, 1956.

The record is filled with specious reasoning, and the preconceived conclusions of some members of the majority.

The objective was to justify a crash program for Federal construction of admittedly uneconomic, large and small scale atomic power plants. The facts brought out in the hearings disclose that such a crash program would hurt rather than help national program of developing the technical knowledge needed to construct and operate nuclear reactors for the production of economic electric power. More serious, however, is the detrimental effect such a crash program would have on the defense activities of the Commission, other defense activities, and of American industry.

Admiral Radford, Chairman of the Joint Chiefs of Staff, testifying on April 18, 1956 before a subcommittee of the House Appropriations committee, pointed up this shortage of competent scientific personnel for research and development work. He said:

"I have come to the conclusion that we are spending probably all the money in research and development that we can spend to advantage. We have reached a stage where the limitation in that field is probably, a matter of competent scientific personnel available for that work.

"We can give a contract to a company for research and usually they will take it. Then we see ads in the paper where they try to hire trained men away from some other company that is producing on some other other defense research program. There is a shortage. If we were to materially increase our efforts in this line I think we would cause trouble."

UNFAIR HEARINGS

One member of the Atomic Energy Commission (apparently the instigator of the crash program idea for the Federal construction of uneconomic atomic powerplants) was given almost unlimited opportunity to present his views and to insert quotations and material in the record. The present position on the part of Mr. Murray appears, from the testimony, to date only from February 23, 1956.

By contrast, Chairman Strauss, and the two other Commissioners present, were treated with unwarranted disrespect, and at times with abuse when they attempted to present facts. The three Commissioners were hindered in the presentation of their testimony, or were prevented from giving complete answers, or were denied the privilege of inserting pertinent information in the record.

An example of favoritism is shown on pages 74–78 of the hearings, where a lengthy statement by Mr. Murray was included without questions. Then, when Chairman Strauss asked permission to include a statement, representing the views of the majority of the commission members, he was told to hand it to the clerk, and that it would be taken up in regular order. That was the last of it. (See pp. 63 and 64 of the hearings, pt. 2.)

Pages 41, 42, and 43 of the hearings, contain the major portion of a "Letter to the Editor," published in the Washington Post and Times Herald on June 25, 1956. These pages are part of the testimony of June 13, 1956. The inclusion of a letter written 10 days later, without explanation and without an opportunity for committee members to agree to its inclusion, or to question statements contained in it, is irregular. The first sentence of the letter was deliberately cut, to prevent divulging the date irregularity.

At one place (on pp. 8 and 9 of the reporter's transcript, No. 79769) there was deleted, from the published hearings, a statement and the questions of a minority member of the subcommittee, and the answers of the witness, without the knowledge and consent of that member.

There appears to us to be little question that the desire to put the Federal Government into the construction and operation of large- and small-scale atomic powerplants is part of an attempt to create a public power versus private power issue for the coming political campaign. Those concerned with this continuing movement towards the nationalization of the electric utility industry know that this poorly disguised basic intent would be futile. It would invite a veto by the President.

Curiously, ample evidence in opposition to a crash program, for the construction and operation by the Federal Government of a large number of atomic powerplants, here and abroad, can be found in an analysis of the statements of the chief proponent of this proposal, as well as in the testimony of the other AEC Commissioners, and of expert witnesses.

In the hearings (p. 362, of pt. 2) Dr. Libby testified frankly that the crash program would, in his opinion, result in drawing scientists from the work on which they were now engaged, in the Commission's carefully planned program, and spreading them thinly over the larger area contemplated in the Murray crash program, to the obvious handicap of an orderly development of such power for both civilian and military uses.

The testimony indicates repeatedly that the Commission's greatest problem is the shortage of technical manpower. With Mr. Murray's own admission (p. 339 of pt. 2) that the AEC staff now has its hands full, it is difficult to see where the additional trained engineers and scientists will come from to take on the proposed crash program. He suggests a new and additional staff in spite of constant testimony on the shortage of scientists.

We call attention to the waste of both money and manpower if we were to start building these reactors all over the world, before we have concluded the necessary research and development in this country. We would have to send technicians to the points of installation, no matter how far away these might be, every time a bug developed in one of the reactors.

Industry itself, cooperating with the Government, is engaged in research and development, leading to the exportation of reactors for foreign markets. The testimony shows a number already contemplated from these sources. As practical know-how increases, there is no reason to doubt that industry will enter this market and expand it.

The implications of the majority report are that the crash program would entail the construction of both large and small scale reactors, which have not yet been proven, and for which there is not yet assurance of successful or safe operation. It must be remembered that we are now appropriating money for continued research on five different types of reactors, only two of which are presently in operation on a practical scale.

The committee members who apparently wish to create a new Federal power monopoly are attempting to use the fact that private industry has not completed an atomic powerplant, and put it in operation, in the less than 2 years which have elapsed since the act was passed, to insist that the Federal Government must now step in. They know that neither industry nor Government can design and build large-size atomic reactors overnight, and that many new and technical problems must first be solved. This is a new industry in itself.

They know that industry is today spending $30 million a year to develop this new industry, and plans an expenditure of almost a half-billion dollars.

Most important, these propagandists for public power monopolies know that, from the very start of the atomic age, when the Manhattan project was the most secret of all war secrets, we have depended on the manpower and the know-how of private industry, just as we should admit we must do today. Without Westinghouse, Du Pont, Dow, General Electric, and the rest of this distinguished list, there would be no bomb, and no "atoms for peace."

MISLEADING AND NONFACTUAL HEADINGS

We deplore the wide use, throughout part 2 of the AEC hearings, of headings that are not in accord with the testimony. This use of misleading and erroneous headings appears to be an effort to influence the reader to accept the interpretations and the preconceived opinions of the majority in charge of the hearings. To us, this indicates a fear, and justifiably so, that the reader would not reach the same conclusions by reading the hearings for himself.

An example will be found on page 375 of part 2. The heading reads: "President Eisenhower's Views Ratify the Approach of the Joint Committee." A few inches below, on the same page, Chairman Strauss points out that the President did not appoint the "McKinney Panel," to which reference is being made. It was appointed by the Joint Committee. The President had not expressed himself.

We call attention to specific inaccuracies in the accompanying committee report: On page 4, the statement is made that "the committee insisted that its hearings * * * be unclassified, etc." Frankly, the committee did no such thing, nor was there any need for it. We have been hearing this subject for more than 10 years, with a constant effort on the part of the Commission to provide "accurate and understandable information," and to declassify it.

On page 7, the report misinterprets the attitude of Chairman Strauss of AEC. Nothing in the testimony confirms this statement, nor does the AEC Chairman hold the opinions charged to him. The unreliability of Russian statistics is a matter of common knowledge, admitted by all AEC Commissioners, including Commissioner Murray, but the conclusion to be reached is an emphasis on the need for constant checking and observation, in addition to our own continued research.

Again, on page 7, the report states that we are 3 years behind Russia and Great Britain. The testimony before the committee, as in the conference at Geneva, is the opposite of this statement.

What the report neglects to state is that an atomic reactor does not produce electric power. The reactor is a substitute for the heat under a boiler. It may be used, among other things, to produce the steam which then operates equipment which in turn produces electric power or light. When the United States operates a reactor continuously for the length of time we have operated one in the *Nautilus*, we have in fact proven not only the design of the reactor, but our lead in this important field. To apply it to the production of electric power, to light a city for example, requires only the necessary designs and construction, and these follow in rapid and proper order, under the program submitted by the AEC.

On page 8, the report states flatly that the United States has nothing comparable to the Russian 5,000-kilowatt plant. In simple language, this is not so. The *Nautilus* and *Sea Wolf* are visible evidences of its inaccuracy. The report omits the known fact that the Russian reactor may or may not have been operating "continuously." The testimony shows it to be supported by a steam-plant tied to the same grid.

On page 9, the report states that "this Nation is bogged down in inexcusable stagnation." This statement is not correct. We have more developments, than at any time in our atomic civilian history. The big reactor and power setup at Shippingport is almost ready for operation. Planned for 60,000 kilowatts, it is now estimated to produce up to 100,000 kilowatts.

Referring to the report, on page 10, we point out that the majority members might at least try to be consistent. The report states that no nation in the world knows which type of reactor is best or safest, and then asks Congress to insist that the AEC build innumerable plants and "tie them into communities for the supply of electricity." In other words, we don't know yet just what to do, so let's go into full (and expensive) production, even if we have to spread our scientific knowledge so thin the safety of the United States may suffer. On page 13 the report states definitely that no industry "dares to take a chance." This is an untrue statement, in the face of the "chances" already being taken by industry to cooperate in the program, and the millions now being spent by industry. Contracts are concluded, or under negotiation, for atomic reactor developments with Commonwealth Edison Co., 180,000 kilowatts; Yankee Atomic Electric Co., 134,000 kilowatts; Consolidated Edison Co., 140,000 kilowatts; Detroit Edison and its associates, fast breeder reactor over 100,000 kilowatts; Pennsylvania Power & Light Co., 150,000 kilowatts; Duquesne Light Co. and Westinghouse Electric Co. (Shippingport plant), 60,000 kilowatts or more; and numerous smaller companies and cooperatives.

On page 16 the report calls attention to the expenditure of $15 billion by the Government. We accept the figure but think the report would have been more honest if it had added that most of this was spent for weapon development, and that we spent the greater part through contractual relations with such industries as we now propose to draw into the picture in the partnership program of the AEC.

On page 16 this astonishing statement is made: "The United States * * * is not coping with these problems." How far can you get from the truth, and print such a statement in a report and still maintain the integrity of a congressional committee?

The original issue of the committee report, furnished the full committee at its meeting this morning, July 20, was so full of inaccurate, and at times almost libelous attacks of the Chairman of the Commission that several of the majority members themselves could not stomach it. We hope it will be cleaned up before it is filed with the Congress. The bitterness of the personal and untrue attacks on Commissioner Strauss, Mr. Visler, and other men who happened to disagree with the committee chairman's predecided opinions, or with the suggestions of the lone minority member of the Commission, is unequaled in the memory of minority members of this committee.

The readers of the report, at some future date, when the heat of the argument has cooled, but the report regrettably still stands as an official record, must understand that the slanderous assertions, if allowed to remain, are untrue, unfair, and unworthy of a committee whose past actions have demonstrated greatness, not pettiness, and that we not only disagree, but say to Chairman Strauss, and the other under attack, that we rank them among the great and the patriotic citizens of this Republic, willing to suffer these indignities in the service of the United States.

On page 20, the report characterizes a full-page advertisement, inserted as one part of an educational campaign, directed to the paper's readers by a group of private power companies, as misleading and ill-advised. We submit that the advertisement was not misleading, but clear and accurate, and we will not join any statement which labels, as "ill-advised," the constitutional right of any citizen or group of citizens to present their side of a controversial issue through either the editorial columns or the advertising pages of any newspaper.

We submit in conclusion, that—

There is no present lack of power in the United States.

We do not underestimate the advances in atomic knowledge made in other countries, and we are aware of them, but the United States still leads in practical research and the development of reactors. To maintain this lead, we must not waste either money or the scientists who have put us in the lead and can keep us there.

The proposed expenditure of $400 million, above the budget request, and against the majority opinion of the AEC Commissioners, is unnecessary, wasteful, and inimical to the best interest of the Nation.

The AEC is carrying on a well-considered and well-planned program, drawing in the best brains and abilities of American industry. We should not insist that these assets be spread as thin, as the bill and the appropriation proposes to spread them.

Nothing in the testimony, nor in the bill, specifies the number of reactors to be built by the United States, nor where they are to be built. We are just to start off in full flight—building them. Nor does any testimony indicate even approximately the probable cost of this "crash" program, nor the length of time it would delay the considered program now underway. Estimates have been made which place the total cost in the billions.

We oppose the inclusion of this initial $400 million, to put the Government in the public power business with atomic energy. We support the original budget request for $1,898,700,000, and are willing to accept the additional $40 million added by the committee.

The Challenge to American Education

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. UDALL. Mr. Speaker, many of us who favor Federal aid to education programs are increasingly concerned about the complacency—both in Congress and out—over the challenge confronting American education. This week, for example, the President's Science Advisory Committee, headed by Dr. James R. Killian, Jr., issued a report boldly pointing out some of our educational shortcomings. Yet there are ample reasons for misgivings that the recommendations of this distinguished committee will be quickly shelved to gather dust along with earlier reports filed by the White House Conference on Education, the National Citizens Commission for the Public Schools, and the

Rockefeller Brothers Fund Report on Education.

The word "crisis" may not be apt to describe our educational predicament. Instruction is not a spectacular feat with climaxes and places for appropriate applause. The intellectual fiber and character of a country are forged both in and out of classrooms by a slow process of accretion. But nevertheless, the capacity of our people to do great things next generation, and the next after that, is for better or worse being determined today and tomorrow.

It is this fact which underscores the concern many of us feel over the recommendation of the Killian and Rockefeller reports that our current annual investment in education should be doubled—as a "minimal rather than an extravagant goal" to quote the Killian group. Who will say that our failure to launch a vigorous three-pronged effort—local, State, and Federal—to reach this goal is not an urgent national task?

Evidence of the challenge we face confronts us almost every time we open a newspaper. I present herewith two illustrative news items—a dispatch filed a few days ago by the Moscow correspondent of the New York Times; and an Associated Press account of a speech delivered last week in Milwaukee by Dr. Edward Teller:

[From the New York Times, May 12, 1959]

STALIN ERA PAST, AMERICANS STRESS

(By Harrison E. Salisbury)

Moscow, May 11.—President Harlan H. Hatcher of the University of Michigan said today it was time that Americans realized the Stalin era was dead and that Russians recognized that the age of the robber nations was past.

President Hatcher made his comment in summing up his favorable impressions of the Soviet educational system from a month's inspection of Soviet universities.

Dr. Hatcher is the leader of one of several American educational groups that have been surveying the Soviet educational field. Other ranking educators who have just completed a study tour include President Henry T. Heald of the Ford Foundation, and Shepherd Stone of the Ford Foundation, Prof. Philip E. Mosely, director of studies of the Council of Foreign Relations; F. Cyril James, vice chancellor of McGill University, Montreal; Norman P. Auburn, president of Akron University, and William Pine, head of the scholarship program of the Ford Motor Co. Fund.

SOVIET GETS HIGH MARKS

Dr. Hatcher spoke only for himself. However, the educators generally gave Soviet higher education very high marks.

"Soviet society is moving at a much faster rate than is generally realized either here or abroad," Dr. Hatcher declared. "Education is the motivating and guiding force in this evolution. I think that the direction of this movement is going to surprise everyone."

Dr. Hatcher said it was time that "my countrymen begin to understand that changes can take place in the Soviet system and that these changes are actually occurring before our eyes."

He said he felt that too many persons in the United States, particularly at the policy-making level, tended to overlook the evolution that has occurred in the last 6 years.

"Stalin is dead and it is time that Washington began to realize this," Dr. Hatcher said. "And in the same connection it is high time that Moscow understands that the era of the robber barons, the era of primitive 19th century capitalism, has ended in the United States and given way to a completely new way of life."

UNIVERSITIES VISITED

The group of educators headed by Dr. Hatcher has visited seven of the principal Soviet universities—Moscow, Leningrad, Kiev, Tiflis, Tashkent, Samarkand, and Irkutsk. Their principal impression in Soviet higher education was one of drive, energy, pioneering spirit and high competence. They devoted chief attention to the humanities and were surprised to find that contrary to the reports of some observers Soviet humanities were not being skimped for the sake of science.

"On the contrary, we have found that the humanities here have benefited from the impact of new scientific attitudes," Dr. Hatcher said. He gave much credit to the excellent foundation laid in the Soviet 10-year schools in languages and in literature; not only of Russia but of foreign countries.

"Students arrive at the university wonderfully well prepared," he said. "They have excellent study habits. Their extracurricular activities are tied into serrious subjects. Reading habits are widespread and good. The use of libraries is exceptional."

It was his opinion that Soviet scientists, engineers, and technicianss had a broader basis of the humanities than many in the United States.

He helped conduct a seminar for graduate students at Moscow University in contemporary literature and was surprised at how widely read and conversant the students were with English and American literature.

"There is a spirit of competition all the way through the Soviet education system and indeed Soviet life which I did not expect to find," he said.

As far as ideology is concerned, Dr. Hatcher said, he examined the content of many ideological courses and found their general nature not so different in concept from American courses in civics and government as he had expected.

He was particularly struck by the driving energy and pioneering spirit east of the Urals. Irkutsk University with 3,500 students soon will double in size while Moscow and Leningrad will remain relatively stable.

TELLER SAYS RUSS LED IN SCIENCE

MILWAUKEE, MAY 20.—Noted physicist Dr. Edward Teller, said Wednesday night that "10 years from now Russia will become the unquestioned world leader in the field of science."

"All we can hope to do is to regain our lost leadership at some later date," said Teller, professor of physics at the University of California at Berkeley. He is generally credited with the major portion of the research which led to the development of the hydrogen bomb.

Dr. Teller said he had no doubt that the world will be modeled after Russian ideas and not after our own by the end of the century.

He spoke at the opening meeting of a 3-day conference at Marquette University on "The Education of the Scientist in a Free Democracy."

In recent years Teller has been an outspoken opponent of nuclear test bans, a proponent of faster missile production, and an advocate of a wide variety of fission and fusion weapons. The 51-year-old Teller often has disclaimed sole responsibility for the hydrogen bomb, but has testified that he was one of only a half dozen or so who worked on it in the period immediately after World War II.

He suggested a few emergency measures in the field of scientific education.

He asked that scientifically inclined children be started early and that talent, which he defined as only a strong interest in what is an endless game with surprises around every corner, be developed. He also pleaded for more and better teachers and teaching methods.

H.R. 2729

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to insert a letter and a memorandum that I have recently sent to the members of the House Committee on Interstate and Foreign Commerce with regard to my bill, H.R. 2729. As I feel this legislation is of great interest to small business, I felt that it should be brought to the attention of this body.

The letter and memorandum follow:

MAY 26, 1959.

The Honorable OREN HARRIS,
Chairman, Interstate and Foreign Commerce Committee, New House Office Building, Washington, D.C.

DEAR MR. CHAIRMAN: I am writing this letter on the equal pricing bill, H.R. 2729, to all members of the House Committee on Interstate and Foreign Commerce in response to a request that they be informed about the measure, its mechanics, and its purposes.

There are two bases for this bill:

1. Complaints in growing numbers from independent businessmen that their manufacturer-suppliers are increasingly entering direct competition with them, either straight to consumer from factory or through factory-owned stores, at prices which the independents cannot meet, on any profitable basis.

2. Research which indicates that our present antitrust laws do not in any way afford any protections for these independent businessmen against this particular type of price discrimination.

There is ample evidence that this manufacturer direct-to-consumer or factory-owned store unfair price competition is injuring independent business people, which is set forth at length in the accompanying memorandum.

As to the second point made in the memorandum, I believe we are all in agreement with the need for such legislation as the Robinson-Patman law now on the books. This law prohibits unfair price discriminations which promote monopoly. But the fact is that while it covers relationships between manufacturers and their various classes of retailers and wholesalers, it does not cover the relationship between a manufacturer selling direct and his own independent retailers.

Mr. George J. Burger, vice president, National Federation of Independent Business had a more than 2-hour conference with the five Federal Trade Commissioners on this problem, last fall. He was told that in the Agency's opinion, the Robinson-Patman law, which aims to promote fair pricing competition, does not extend to price discriminations between manufacturers selling direct and through factory-owned stores on the one hand, and their independent dealers on the other. The plain fact is that as matters stand, so far as the independent who is being unfairly squeezed by his own manu-

facturer-supplier is concerned, he has no protection, and he has no hope of protection.

My own investigations confirmed this fact, and that is why I am sponsor of H.R. 2729. The one and only purpose of this bill is to afford the independent businessman the same assurances of fair, nonmonopolistic competition in his relationship with directly competing manufacturer suppliers as he already has in other respects.

I do think this bill is urgently needed, and I urge your favorable action on it so that it may become law.

Sincerely,

ALVIN M. BENTLEY,
Member of Congress.

MEMORANDUM REGARDING H.R. 2729

On March 25, 1959, Mr. James W. Cassedy, general counsel, National Auto and Flat Glass Dealers Association, spoke before this committee in support of H.R. 2729. He quoted reports from many of his group's members indicating injury from this type of factory direct competition. Here are a few of those quotes:

"Ed's Glass Shop, 739 Southwest 29th, Oklahoma City, Okla.: 'In 1956 our account with Pittsburgh Plate Glass was in excess of $17,000, but they did not think enough of my account, so in turn they solicit my accounts, selling some of them at the same price they sell auto glass shops.'

"Allentown Glass & Paint Co., 501 North Seventh, Allentown, Pa.: 'They (Pittsburgh Plate Glass) sell glass to our insurance and garage customers at the same price they sell to us who are dealers or retailers.'

"Bridgewood Auto Glass Co., 1422 Stiles, Philadelphia, Pa.: 'Pittsburgh Plate has gone into dealers and sold them bent glass at the price I buy it.' "

On March 23, Mr. Frank T. Underhill, executive director, Independent Shoeman, speaking in favor of H.R. 2729, told the committee: "My association naturally is in favor of H.R. 2729 inasmuch as (maintaining free enterprise in the shoe industry) is the very reason for Independent Shoeman's existence. It has frequently come to our attention that factory-owned or factory controlled retail outlets quite often enjoy a competitive advantage over the independent operator due to special prices, extra discounts or advertising allowances or some volume incentives. These reflect in the selling prices * * *. Testimony given in the Brown-Kinney trial (civil action No. 10,527) indicates that the practice of lower prices to factory owned or controlled stores is very much a reality by those companies engaged in dual selling."

On March 23, 1959, in my own testimony before this committee I quoted from one of my own constituents, Mr. Ron Bushey, Bushey Radiator & Auto Glass Co. of Saginaw, Mich.:

"I have been told by the manager of Pittsburgh Plate that they expect me to purchase from them between $35,000 and $40,000 of their glass, which represents about one-third of my yearly purchases, and if I didn't, they would find another outlet. Please remember that Pittsburgh is in the retail business as my competitor. As such they have cut prices to my customers. Where I have sold to accounts for years, Pittsburgh has cut my price by 15 percent. * * * After cutting prices, Pittsburgh raised their price to me by 10 percent * * *. This is a tragic situation for us little fellows trying to survive. This great company that manufactures, wholesales, and is my supplier—is now openly trying to get all my customers for their own retail shop."

This is about the same situation as one independent tire dealer recently mentioned to Mr. George J. Burger, vice president, National Federation of Independent Business. In part, this dealer declared (I will supply his name on request):

"Since 1922 I have been a tire distributor for * * *. My business represents an investment of $365,000 in the physical plant alone, and a half a million dollars including equipment, plus my 49 years of experience in the tire business. I built this business up to a volume of $1 million a year. In recent years the unfair and discriminatory practices of the tire companies have reduced my business to where it is running at about $250,000 a year. Five years ago I had 27 employees. Today I have 12. Until 5 years ago my business was profitable. Today I am supporting my business out of my savings and investments. Last year I lost $26,000 in cash in my business, without taking out a penny for myself. In the past 8 months I have had to put $100,000 into the business. If present conditions continue I will soon be out of business. * * *

"The very tire manufacturers whose business we independent dealers helped build are now destroying our business by sending company salesmen into * * * to sell tires to our customers cheaper than our buying prices. As a volume distributor I buy tires from the manufacturer at a discount of 6 tens off the manufacturer's list price plus an additional discount of 8 percent. I know of many instances where the tire companies in recent years have sold tires to my former customers at discounts of 7 tens and even 8 tens off list price. No one of such customers buys half as many tires as I do. I am not talking about sales to national companies, which are bad enough. I am talking about local truckers and transportation companies. The tire companies will sell direct, at prices equal to and often below my cost, to anyone who has two trucks or more * * *. The situation cannot continue much longer without ruining me and other independent tire dealers."

The foregoing ties right in with an editorial which appeared recently in Super Service Station, a publication of the Irving-Cloud Publishing Co., for many years a recognized authority on the automotive aftermarket. In part, this editorial read:

"Regulation of pricing under dual marketing practices may be one bit of legislation that most independent petroleum marketers and tire dealers will agree would help their businesses by removing two of their worst griefs.

"Relief is promised in a bill (H.R. 2729) introduced in the Congress by Representative ALVIN M. BENTLEY, Republican, Michigan. It might stop one practice of which oil jobbers have been complaining for years, and equalize retail competition between gasoline and tire dealers, and their suppliers' stores.

"The Bentley bill might not affect gasoline at service stations as much as tires which, it is the belief of antitrust bill sponsors in Washington, are billed to company stores at lower prices than the prices charged other retailers. * * * The Bentley bill may not be the solution of all manufacturer-distributor-dealer price troubles, but its passage could bring considerable relief in some areas."

But getting back to the tire field, actually the conditions noted above are nothing more than a worsening of conditions found by Burger Tire Consultant Service in a survey of 4,000 independent tire dealers nationally. In signed statements (which are available to the committee for inspection), the following allegations were made, based on the operating experience of these independent businessmen:

Some 77 percent of the Goodyear dealers who replied said that prices set by manufacturers selling direct or through their own stores were so low as to deny them a chance to remain competitive and make a profit.

Some 90 percent of the Firestone dealers who replied said that prices set by manufacturers selling direct or through their own stores were so low as to deny them a chance to remain competitive and make a profit.

Some 100 percent of the Goodrich dealers who replied said that the prices set by manufacturers selling direct or through stores were so low as to deny them a chance to remain competitive and make a profit.

An average 75 percent of the foregoing dealers of all three manufacturers charged that tire manufacturers operating their own stores do not give independent dealers the same buying prices and services they offer their own outlets * * * and consequently, an average 84 percent said they knew of cases wherein tire manufacturers operating their own stores undersold their own dealers through these stores.

That is why one prominent midwestern dealer, Mr. Charles Raney, Jr., told Senate Judiciary Committee on May 21, 1954: "If I thought that the past and present trends in the (factory direct) distribution of tires were to continue without correction, I would sell my business without further consideration and attempt to obtain employment with one of the major rubber companies, because surely as time passes, there is where we dealers would eventually be if we wished to remain in the tire industry. How can I, as an independent tire dealer, hope to compete with my own suppliers, when they are attempting to make deals direct with the consumer at prices very near those that I pay and in some instances considerably below?"

With reference to the survey conducted by Burger Tire Consultant Service, you will note there is no reference in it to the U.S. Rubber Co. That was because at the time it was the policy of that firm not to operate through company stores. Actually, immediately before World War II, this firm did operate company stores. Alleged price discriminations between these stores and its own independent dealers were part of charges of unfair competition brought against it by the Federal Trade Comimssion. But FTC dropped these charges when informed that U.S. Rubber had closed its factory stores. You may be interested to know that several years later, U.S. Rubber told a congressional committee it was happy over this decision, because it found operating conditions better through independent dealers only. However, only recently, the firm reversed its policy on these things, and it now plans to open factory-owned retail stores once more.

Now I have mentioned testimony of the injurious nature of this type of factory direct competition with retailers in the glass, shoe, and tire industries. I have touched on evidence of its existence in the oil industry. I can assure you that it exists in other industries, such as paints and plumbing. In other words, there is ample evidence that this type of direct competition is not the problem solely of one independent in one industry, or of the independents in any single industry. It covers independents in a broad and important segment of industries, and as evidenced by reference to the United States Rubber Co. (above), and in the following testimony by George J. Burger, vice president, National Federation of Independent Business, before this committee, on March 18, 1959:

"Is the retail shoe industry—as to the actual number of stores owned and operated by major shoe producers, at this moment I do not have the estimated number but we have noted in a recent announcement in the Wall Street Journal February 6, 1959, that the General Shoe Co. proposes to open about 50 retail stores in the low-price women's shoe field, and of course it goes without saying that what this company does, others will follow."

It is a growing problem.

Furthermore, as Mr. George H. Frates, National Association of Retail Druggists, told the Senate Judiciary Committee, on May 21, 1954, while testifying in favor of S. 175, a

bill to divorce tire manufacturers from retailing:

"We are in favor of passage of S. 175, which is now pending before your committee. It might seem at first blush that there is a wide variance between the retailing of automobile tires and the retailing of drugs and drug sundries, therefore, we respectfully wish to call to the committee's attention the fact that the invasion of one field, if financially successful, presupposes the entry into another area."

But suppose this problem did not exist on such a broad basis. Suppose it were limited to, say, part of only one industry. I contend this would not make it any the less deserving of our attention, or any the less actionable on our part. As Mr. George Burger, vice president, National Federation of Independent Business has said, time and again, the basic question is whether it is right for a manufacturer to be able to go into markets and, either through factory-owned stores or direct from factory, undersell his own established independent dealers, on a basis that has no necessary direct relationship to their efficiency of operations. Or, as Mr. George H. Frates, National Association of Retail Druggists, put it in his 1954 testimony:

"If a company is permitted to manufacture, distribute, and retail a given product, under our free enterprises system that act is their privilege. Our concern, however, stems from the utter unfairness of a manufacturer selling his own wares at retail for a price substantially lower than other retailers handling this same item—this applies to services as well as merchandise. We believe this manipulation is accomplished by rigged discounts and is a violation of fair dealing in the marketplace. A manufacturer who competes with his retailing distributors and engages in predatory price cutting uses the tools of a monopolist."

That Phony Economic War

EXTENSION OF REMARKS

OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 28, 1959

Mr. DAVIS of Georgia. Mr. Speaker, I have never believed that the way to fight communism is to throw our taxpayers' money around the world indiscriminately to friends and foes alike. The administration's $3.93 billion foreign aid request for economic as well as military aid is for some 70 countries, including Communist Poland and Yugoslavia and pro-Communist India and Indonesia, is far out of line. The criterion for any sort of aid, it seems to me, should be the demonstrable need on the part of a proven friend and ally to shore up its defenses against the threat of Communist takeover.

I think it is clear that the front which we must defend is the military, not the economic or any other. To do otherwise, as I fear the administration contemplates doing with new foreign aid appropriations, is to engage in a type of suicidal shadowboxing. We would be committed to a policy of operating an international soup kitchen—with no strings attached—while the Russians advance in their program with limited loans for specific purposes at high interest rates

Very much to the point on this subject of economic aid is the editorial entitled "That Phony Economic War" which appeared in the Indianapolis Star of April 12, 1959. Pursuant to the unanimous consent of the House, I insert that editorial herewith:

THAT PHONY ECONOMIC WAR

We have received from the U.S. State Department a booklet titled, "The Communist Economic Threat." It seeks to prove that the Communists are using a new weapon, economic pentration. And it can be the most dangerous of all weapons in the Communists' varied arsenal.

Now let's just analyze the facts about this economic threat. The booklet states, "Since 1954 the Soviet bloc countries have concluded agreements with 18 of the less developed countries outside the Soviet orbit which provide for the extension of an estimated $2,400 million in intermediate and long term credits and grants for goods and services from the bloc."

Sounds dangerous, doesn't it? But listen to what the booklet does not say: For instance, the United States has given away approximately $24 billion to foreign countries since 1954. That is 10 times the estimated Soviet program.

But even more was left out of the booklet. The $2,400 million Soviet credit program (and it is chiefly credits loaned at 2 to 2.5 percent interest) is figured at the Soviet rate of exchange of 4 rubles to a dollar. The dollar, however, according to the Perrera Co. in New York, which deals daily in foreign exchange, is actually worth between 25 and 50 rubles. In other words the actual buying power of the ruble is from 6 to 12 times less than the Soviets say it is.

For the sake of simplicity let us use the figure of 24 rubles to the dollar as a most generous figure to the Soviets, being less than the world money market would demand yet more accurately reflecting the true value of the ruble. Our figures below are all based on a ratio of 24 rubles to a dollar.

At 24 rubles to a dollar, instead of the 4 used by the State Department in arriving at the $2,400 million figure, we find that the Soviet program suddenly shrinks to $400 million or one-sixth as much as claimed. This means the Soviets are, in truth, lending $100 million or less a year while the United States is giving away around $6 billion a year, a ratio of 60 to 1 for the United States.

Don't go away, there's more. The State Department booklet itself states that only about 38 percent of the credits (from the Soviets to those 18 countries) have been drawn. So the $2,400 million program which became $400 million at the most in real dollars, suddenly turns out to be $152 million actually spent by the Soviets since 1954, a measly $38 million a year and a tiny six one-thousandths of the U.S. foreign aid program.

And here is something else. U.S. private industry and business, according to our own State Department officials, invests about $2 billion a year in foreign countries. At the same time private charities and foundations send a huge total of $500 million every year to backward and forward countries. So it turns out that private industry and private charity in the United States are sending more dollars every year to foreign lands than the Soviet Union says it is sending in 4 years. With no foreign aid spending at all, the United States invests 66 times as much money abroad as the Soviet Union every year.

But of course, the real truth is that foreign aid spending or Soviet "economic penetration" has nothing whatsoever to do with fighting communism or advancing communism.

For an actual case history of how foreign aid has nothing to do with pro or anti-communism take Egypt and Iraq. The Soviets have advanced credits, according to their own figures and the State Department's booklet, of $782 million to Egypt since 1954. Of course the true dollar value of these credits is about one-sixth as much or about $130 million which is still the most loaned by the Soviets to any non-Communist country. Iraq on the other hand got all of its economic and military aid from the United States and Great Britain. The Soviet Union gave Iraq nothing whatsoever. But it is Iraq that is now virtually Communist and it is Egypt's President Nasser who is leading the Arab anti-Communist cause. Anybody who can contend that foreign aid fights or advances communism from this example has an upside down mind.

Now let's look at some facts on foreign trade. According to the Soviet Affairs Analysis Service, prepared from Soviet statistics by the "Institute for the Study of the U.S.S.R." in Munich, Germany, the total foreign trade done by the Soviet Union in 1957 was 33,300 million rubles. Translated into real dollars the highest possible figure would be $1,387 million in Soviet trade a year. But 24,500 million rubles' worth of this trade is entirely inside the Soviet bloc. Trade with non-Communist nations is only 7 billion rubles or around $290 million a year. Why the free world's trade in Asia and Africa alone is $23 million a year, or 92 times the total Soviet trade with the entire free world.

The entire Soviet foreign trade, inside and outside the Communist bloc, amounts to only 3.6 percent of the world's exports and 3.3 percent of the world's imports. Each of the Big Four nations, the United States, Great Britain, France and West Germany, does more foreign trade than the Soviet Union. How can a nation with such a comparatively small trade potential pose a dangerous "economic threat" to the free world? How can Soviet trade-aid programs be considered "the most dangerous of all weapons in the Communists' varied arsenal?"

The truth is that the Soviet threat to the free world is not economic at all, it is political and military. Of course they do use whatever economic power they have for political advantage. They make a big show of what little they have. When they send automobiles to Argentina to sell for 2,500 rubles each and they sell the same cars in the Soviet Union for more than 10,000 rubles, they are simply using automobiles for political dramatics.

In this field of political exploitation of every Soviet resource from trade to guns to diplomacy, intrigue and mass murder the Soviets are indeed winning the cold war, not because they have big resources, but because they have the skill to use what little they have effectively. With the free world's total resources, or just U.S. resources alone, we could easily defeat the Soviets in this drive for world domination. It is our policies that are at fault, not our resources. Until we rid ourselves of the absurd and demonstrably false idea that we can defeat Communists with foreign aid, we will keep on wasting $6 billion a year for nothing while they make a modest profit on the interest they get from their little credit program.

When Lincoln said, "You can fool some of the people all of the time, and all of the people some of the time, but you can't fool all of the people all of the time," perhaps he was right. But how much time is it going to take "all the people" of this country to stop being fooled by this phony State Department policy of fighting Soviet economic penetration with foreign aid dollars?
